RECENT LEGAL DECISIONS AFFECTING LABOUR

Conviction of Canadian General Electric Employees on Illegal Strike Charge

On December 19, Mr. Justice Gillanders in Ontario Court of Appeal quashed the convictions of fourteen employees of the Canadian General Electric Davenport plant (Toronto) who had been charged with going on strike contrary to the provisions of the Industrial Disputes Investigation Act as extended by P.C. 3495 of November 7, 1939. The appeal was by way of stated cases from an order of Magistrate Forsyth of Toronto. The original action arose in connection with a strike lasting from June 4 to 12, 1941, of over 700 workers in two plants of the company in Toronto. (LABOUR GAZETTE, February, 1942, p. 134.)

It was pointed out in the stated cases that the Davenport plant was declared an essential service within the meaning of the Defence of Canada Regulations by P.C. 4669 of September 11, 1940, and that by P.C. 3495 the Industrial Disputes Investigation Act was extended to war industries. This was taken by the Court to be the evidence on which the Magistrate had based his conclusion that the plant came under the Act. Under secs. 57 and 58 of the Act it is unlawful for an employee to go on strike until a Board of Conciliation and Investigation appointed by the Minister of Labour has made a report.

The Court held that the declaration under P.C. 4669 that the operation of a plant constitutes an essential service does not have the effect of bringing it under the provisions of P.C. 3495 and so within the scope of the Act. Such a declaration merely enables the civil authorities to enforce, in regard to that plant, the provisions of the Defence of Canada Regulations relating to trespassing or loitering on or near such premises and to acts intended to impair the efficiency or impede the working of any undertaking engaged in the performance of essential services. It does not declare the plant in question or the work carried on there to be among the undertakings specified in P.C. 3495, i.e., those engaged in production of "munitions of war" or "supplies" or in the construction of "defence projects." The Court therefore found that there was "no evidence in the stated case to support a finding that the plant in question here came under the provisions of the Act." (Typewritten copy of judgment).

On February 25, Mr. Justice Gillanders dismissed an application by the Crown in one of the cases for an order under sec. 766 of the Criminal Code that the stated case be sent back for amendment. The application was based on the claim that there was "ample evidence in the record, although it had not been mentioned in the case stated, to support the finding that the Act was applicable." The Court held, however, that a case cannot be sent back for amendment after judgment has been delivered even though the formal orders have not been issued. *Rex ex rel Smith v. Martin.* (1942) Ontario Weekly Notes 58.

Alberta Employer Responsible for Act of Employee Done in Course of Employment

On January 29, the Appellate Division of the Alberta Supreme Court unanimously upheld a judgment by Howson, J., in which an employer was held to be liable for damage caused by the negligence of one of his employees. The decision applied to four actions which were tried together. By agreement only the question of liability was determined, since the fact that the plaintiffs had suffered damage was not in dispute.

The property of the plaintiffs had been damaged as a result of a fire which started when an employee of the defendant had tried, without any instructions in that regard, to burn rubbish which he had cleaned out of his employer's store. The Court supported the conclusion of the trial judge that the employee was acting within the scope of his employment even though he had received no instructions for the specific act which caused the damage. The defendant introduced a further argument, viz., that the servant's act amounted to a nuisance and was thus illegal. The Court held, however, that whereas the argument might be pertinent if the employee had done an act which had no relation to his employment, it had no force when, as here, the act was clearly in the course of the employment. *Edmonton* v. *W. W. Sales, Limited, Armstrong-Cosans, Limited,* v. *W. W. Sales Limited, B. Sheldon's, Limited* v. *W. W. Sales, Limited, Arkinstall* v. *W. W. Sales, Limited,* (1942) 1 *Western Weekly* Reports 375.

British Columbia Court Orders Old Age Pension Continued to Pensioner who Sold Property to Discharge Debt

On January 24, Mr. Justice Manson in British Columbia Supreme Court granted a *mandamus* to compel the payment of a pension pursuant to the Dominion and British Columbia Old Age Pension Acts. The applicant had been in receipt of a pension, but when he disposed of certain property the Workmen's Compensation Board which administers the Act stopped his pension. In justifying its action the Board cited Regula-

tion 23 under the Dominion Old Age Pensions Act which provides that if a pensioner makes a voluntary transfer of property without the approval of the pension authority the pension may be suspended until the value of the suspended payments equals the value of the transferred property. The Court found, however, that in the present case the transfer had been made in discharge of a debt which had been contracted for the payment of a mortgage and taxes on the land and for other purposes, and that it was therefore not a voluntary transfer.

The question arose as to whether a writ of *mandamus* was proper under the circumstances. If the Board was an agent of the Crown, such a writ could not be issued. The Court held that the Board was not a general agent of the Crown but a special agent constituted by statute to administer the old age pensions legislation and therefore an agent of the legislature. A further argument that *mandamus* would not lie because the Board was disbursing public funds was rejected on the ground that the funds for the payment of pensions had been specifically allocated for the purpose by the legislature. *Rex ex rel Lee* v. *Workmen's Compensation Board,* (1942) 1 Western Weekly Reports 352.

United States Government Standards for Wartime Employment of Young Workers in Agriculture

Principles to govern the recruitment of young workers for agricultural work, if that should become necessary, were approved recently by the Children's Bureau of the United States Department of Labour, the Employment Service, the Department of Agriculture and the Office of Education.

The conference of these Government agencies declared that school and home duties should be the full-time job of every child under 14 and that such children should not be in agricultural work outside the home farm "except when it has been established that unforeseen and extraordinary public emergencies exist." Nor should children over 14 have their education interrupted "unless no alternative source of labour can be made available".

It was agreed that policies for the employment of young workers should be developed with "full regard to laws on child labour and school attendance and to safeguards necessary to protect the health and well-being of these young workers and the continuity of their education". The recruitment of young workers should be part of a broad plan worked out by State departments of education, labour and agriculture and "based on consideration of all available sources of labour and the wages and working conditions offered to adults". The employment opportunities of older workers should not be jeopardized by the addition of young persons to the agricultural labour force.

The conference stressed the point that children should not be employed during normal school terms unless the Farm Placement Service, with full information on the labour situation, had determined that the need for agricultural workers could not be met by older persons resident in or near the locality. In such cases, children of 16 and over should be engaged before younger children were accepted. "The schools should make every effort to develop programs that will wisely dovetail school activities with agricultural work and will result in no curtailment of school terms". The conference urged that policies be worked out which interfere as little as possible with normal school opportunities and progress.

Conditions of work which will safeguard the health and welfare of the young workers must be established. These include reasonable hours, safe and suitable transportation where needed, adequate housing accommodation, supervision and leisure time activities for workers away from home, and equitable wages at not less than prevailing rates.

The conference was of the opinion that these standards were "fully compatible with the needs of wartime production" and would enable youth to take its proper share in the national emergency.

According to the twelfth annual report of the Director administering the Mothers, Allowance Act in Nova Scotia, in the year ending November 30, 1941, there were 1,050 families receiving Mothers' Allowances, 21 less than at November 30, 1940. During the year, 192 applications were received of which 157 were granted. The total amount paid to beneficiaries during the year was $418,286.75. The average number of dependent children per family was 3·34.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment at the beginning of February showed a further slight decline, according to returns received by the Dominion Bureau of Statistics from 12,891 firms, each with a minimum of fifteen employees. The staffs of these firms aggregated 1,653,942 persons at February 1, as compared with 1,658,681 at January 1. The crude index, based on the 1926 average as 100, fell from 165·8 at January 1 to 165·4 at the beginning of February, when it was higher than at midwinter in any other year for which statistics are available. At February 1 in immediately preceding years, the index was as follows:—1941, 135·2; 1940, 114·4; 1939, 106·5; 1938, 110·4; 1937, 104·1 and 1936, 98·4.

The movement at February 1 in three of the last five years has been retrogressive, although activity has, on the average, shown a small advance at midwinter in the last twenty-one years. There was accordingly a slight falling-off in the seasonally adjusted index for February 1, 1942. This stood at 171·8, compared with 172·3 at the beginning of January; these two are the highest in the record.

The persons on the paylists of the co-operating establishments at February 1, received $45,746,190 for services rendered in the week preceding. This was an increase of $2,404,995, or 5½ p.c., over the aggregate weekly payrolls disbursed by the same firms at January 1. The per capita average in the latest period of observation was $27.66, as compared with the average of $26.13 paid at the beginning of January, when the figure had been lowered by the observance of the Christmas and New Year's holidays.

Unemployment in Trade Unions.—At the beginning of March, 1942, the percentage of unemployment among trade union members stood at 4·0 in contrast with percentages of 4·3 at the beginning of February and 6·9 at the beginning of March, 1941. The percentage for March was based on returns compiled from 2,114 local labour organizations with a total membership of 324,748 persons.

Report of the Employment and Claims Offices.—Reports received from Employment and Claims Offices of the Unemployment Insurance Commission during February, 1942, showed a moderate gain in the average daily placements in employment when a comparison was made with those of the preceding month, but a fairly substantial decline from those of February last year. The most marked changes under the first comparison were gains in manufacturing and construction, but these were largely offset by a noticeable decrease in logging. Under the second comparison heavy reductions took place in construction services and logging. Vacancies in February, 1942, numbered 27,546, applications 45,075, and placements in regular and casual employment 22,410.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 115·9 at the beginning of March as compared with 115·7 for February; 115·4 for January; 108·2 for March, 1941; 104·6 for March, 1940; and 100·8 for August, 1939, the last prewar month. The slight advance recorded at the beginning of March was due to higher prices for certain foods, other groups being unchanged. The advance between August, 1939, and March, 1942, was 15·0 per cent as compared with an increase of 25·2 per cent between July, 1914, and February, 1917, an equal period in the last war. In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 95·1 for March, 1942, as compared with 94·6 for February; 85·9 for March, 1941; and 72·3 for August, 1939, the last prewar month. The increase in the index between August, 1939, and March, 1941, was 31·5 per cent.

Business Statistics.—The table on page 382 gives the most recent statistics available reflecting industrial conditions in Canada. Activity in mining, manufacturing, construction, electric power production and in the distribution of goods, is reflected by the index of the physical volume of business. This index in February while considerably lower than in either of the two preceding months was five per cent higher than in February, 1941. The previous high level of activity recorded by the index in 1929 was exceeded in 1940 and considerable expansion has been recorded since that time.

Cumulative totals for the first two months of 1942 as compared with the same period in 1941 show the production of coal 11 per cent greater, production of flour 19 per cent greater, newsprint 16 per cent greater, pig iron 41 per cent, steel 25 per cent, and electric power 20 per cent greater. The figures as to the value of exports increased 69 per cent for the first two months of the present year as compared with January and February in 1941, and imports 39 per cent. Carloadings were about 17 per cent greater in the same comparison and gross revenue of the railroads 27 per cent.

Information available for March shows carloadings, earnings of the railroads, and the value of construction contracts awarded during March to be at higher levels than in February and higher also than in March, 1941.

Strikes and Lockouts.—In March the number of strikes and lockouts recorded was 18, involving 3,770 workers and causing time loss of 23,191 man working days, as compared with 16 disputes in February, involving 2,901 workers with time loss of 23,997 days. In March most of the time loss was due to strikes of coal miners at Springhill, N.S., bakers at Montreal, P.Q., automobile parts factory workers at Windsor, Ont., and biscuit and candy factory workers at Vancouver, B.C. In February most of the time loss was due to two strikes involving gold miners at Kirkland Lake, Ont., and textile factory workers at Lachute Mills, P.Q.

During March, 1941, there were 11 disputes involving 1,135 workers with a time loss of 3,515 days. The only strike of importance involved tannery workers at Oshawa, Ont., causing time loss of 1,250 days.

Of the 18 disputes during March of this year, 16 were terminated, four in favour of employer, four in favour of workers, one in a compromise settlement, while seven were indefinite in result. Two disputes, involving 297 workers, were recorded as unterminated at the end of the month.

These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or declared terminated by the unions concerned.

Industrial Disputes Investigation Act

Seven applications for the establishment of Boards of Conciliation and Investigation were received during the month of March. One board was established and the constitution of three boards established in February was completed. Two boards submitted their reports. Industrial Disputes Inquiry Commissioners were authorized to investigate six disputes in connection with which board applications had been received, as well as one case where no application had been submitted. During the month, Commissioners submitted their reports on the investigation of three disputes and two cases of alleged discrimination. Two disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 391.

Proceedings under Industrial Disputes Investigation Act during fiscal year 1941-42

In the fiscal year which ended on March 31 considerably more applications were received for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act than in any previous year since the enactment of the statute in 1907. An average of 34 applications per year have been received in the 35 years in which the statute has been in effect, and for the same period an average of 19 boards per year have been established. In the fiscal year just ended 132 applications were received and 45 boards were established. As a result of board procedure, cessation of work was averted or ended in all but 9 of these cases.

The annual report of the Registrar of Boards of Conciliation and Investigation is in the course of preparation. This report will contain full particulars with regard to proceedings under the Industrial Disputes Investigation Act in the fiscal year 1941-42. As soon as the report is available for distribution, an announcement to this effect will be made in the Labour Gazette.

National Selective Service Policy

Elsewhere in this issue a detailed article is presented outlining the Government's National Selective Service Policy, which was announced by the Prime Minister, Rt. Hon. W. L. Mackenzie King on March 24. The Orders in Council establishing this man-

power mobilization plan are presented in full, together with a brief summary of each Order by way of introduction.

Appointment of Director and Associate Director, National Selective Service

Following the announcement of the Prime Minister, Rt. Hon. W. L. Mackenzie King, in regard to the organization and administration of National Selective Service and the responsibility of the Department of Labour in increasing man-power reserves the Minister of Labour, Hon. Humphrey Mitchell, announced the appointment of E. M. Little as Director of National Selective Service, and of Paul Goulet as Associate Director.

The new Director is one of the highest ranking industrial engineers and business administrators in Canada. Immediately prior to his new appointment he was Director of the Wartime Bureau of Technical Personnel, which has been most successful in supplying war industries with technical experts and scientists.

Born in Beachburg, Ontario, he secured his public and high school education in Haileybury and began his career in the pulp and paper business in 1914 with the Abitibi Power and Paper Co. Limited, at Iroquois Falls, where he started as office boy.

For about fourteen years he remained with the company, going through every department in the business, including office and mill, and finally became assistant mill manager.

His service with Abitibi was interrupted early in 1918 when he joined the Air Force, enlisting at Montreal. Following demobilization in 1919, he entered the Faculty of Applied Science and Engineering at the University of Toronto, and was graduated as a B.A.Sc. in electrical engineering in 1925, having been out one year because of a death in the family. Upon graduation he returned to the Abitibi Company as plant electrical engineer, later became Assistant Manager; he remained there until 1932, at which time he joined the Anglo-Canadian Pulp and Paper Mills, Limited, at Quebec City. In 1933 he was made general superintendent of this Company, and in 1937 he became associated with the Gaspesia Sulphite Company Ltd., an affiliated organization. He is now general manager of the Anglo-Canadian Pulp and Paper Mills Limited and President and General Manager of the Gaspesia Sulphite Company Ltd.

Mr. Little has taken a leading part in the affairs of the Canadian Pulp and Paper Association, being a member of the Executive Council, and vice-chairman of the joint administrative committee in charge of research in the industry. He has also been chairman of the technical section of the Association and is a member of the Executive Committee of the Newsprint Association of Canada.

His residence is in Quebec, and his services are made available to the government through the generosity of the officers of the two companies by which he is employed.

The Associate Director, Mr. Paul Goulet, has also had a successful career in the sphere of Canadian business and industry. He is a partner in the firm of L. J. Forget and Company, Montreal, with which he has been actively associated for the past 27 years.

He is a past governor of the Montreal Stock Exchange, and is second vice-president of the Montreal Chamber of Commerce.

His most recent achievement in the national war effort was in connection with the second Victory Loan Campaign of which he was vice-chairman of the Provincial Employee Committee of the Province of Quebec.

Continuous operation of west coast shipyards

On April 14, in response to an appeal of the Minister of Labour, Hon. Humphrey Mitchell, that the West Coast shipyards operate twenty-four hours a day, seven days a week, to meet the critical need for ships, the union representatives and employers accepted the Minister's proposals and immediate arrangements were made to provide for the continuous operation of the shipyards.

The Minister and J. A. McClelland, member of the executive of the National War Labour Board, recently visited the west coast and were impressed by the willingness of the men to find a basis of agreement in order that work could proceed without delay.

Subsequently, the Minister made certain proposals which were accepted by the union representatives and the managements. In support of his formula the Hon. Mr. Mitchell sent the following urgent message to F. E. Harrison, Western Representative of the Department of Labour at Vancouver:

"Please give the following message to managements and unions in shipyards:

'The increasing loss of ships by enemy action is the greatest threat to victory in this war. The sinking of ships is the enemies' answer to our effort to transport our men and supplies to distant theatres of war and to crush him there before he can add our own land to his list of conquests. The answer to this challenge lies solely with you who build ships. I ask the shipyard workers and managements of British Columbia for our country's sake and for sister nations calling to us in their peril to see to it that your yards operate twenty-four

hours a day, seven days in the week. I propose that each man shall work six days per week and that Sundays shall be worked by staggering of time, also that any payment of double time for overtime or holiday work be discontinued. The first shift should work eight hours per day forty-eight hours per week with fifty hours' pay, and a half-hour should be allowed for a meal period, a total of eight and one-half hours per day. The second shift should work seven hours and forty minutes per day, forty-six hours per week, with fifty-four hours' pay and twenty minutes should be allowed for a meal period, a total of eight hours per day. The third shift should work seven hours and ten minutes per day, forty-three hours per week, with fifty-four hours' pay and twenty minutes should be allowed for a meal period, a total of seven and one-half hours per day. This proposal maintains the present agreed conditions for the first shift, that is, time and one-half for the additional four hours on the sixth day, and also maintains the present premium rates for the second and third shifts and gives twenty-four hours operation daily. May I have your immediate acceptance. Every hour lost is gain for the enemy.

Humphrey Mitchell, Minister of Labour.'"

On April 14 a return wire from Mr. Harrison declared that the representaives of all the unions involved had accepted the proposals of the Minister of Labour.

"I am deeply appreciative of the patriotic and determined attitude of both the employers and workers of the British Columbia shipyards that nothing will be left undone to maintain our Pacific and Atlantic life lines," declared the Minister of Labour, who added that "with such co-operation between workers and management victory cannot be denied."

Personnel of re-constituted Inter-departmental Committee on Labour Co-ordination

The Inter-departmental Committee on Labour Co-ordination has recently been re-constituted to include a wider representation of the Departments of Government concerned with the utilization of labour supply, together with a representative of the employers and the workers.

This Committee was established by Order-in-Council P.C. 5922 of October 25, 1940, for the purpose of co-ordinating the labour functions of the several Departments vitally interested (from various angles) in obtaining an adequate supply of labour, and also to facilitate unified planning.

It is continuously engaged in surveying present and future labour requirements. With the advent of National Selective Service and the extension of the functions of the Committee to integrate its activities with those of the man-power program, it was decided to increase the personnel. Accordingly, the following Departmental representatives now comprise the re-constituted Committee:

Labour—Dr. B. M. Stewart, Deputy Minister and Chairman. Mr. E. M. Little, Director, National Selective Service. Dr. W. J. Couper, Executive Assistant.

Munitions and Supply—Mr. H. C. Goldenberg, Associate Director General of Economics and Statistics.

National Defence:

Army—Lieut.-Col. G. S. Currie, Executive Assistant to Minister.

Air Services—Mr. H. F. Gordon, Assistant Deputy Minister.

Naval Services—Mr. H. A. Wilson, Executive Assistant.

National War Services—Maj.-Gen. L. R. LaFleche Associate Deputy Minister.

Agriculture—Dr. G. S. H. Barton, Deputy Minister.

Finance—Dr. W. A. Mackintosh, Special Assistant to Deputy Minister.

Wartime Prices and Trade Board—Mr. K. W. Taylor, Secretary.

National War Labour Board—Mr. J. A. McClelland, Mr. George Hodge.

Pensions and National Health—Dr. J. J. Heagerty, Director of Public Health Service.

The representatives of the workers and the employers are Mr. J. A. McClelland and Mr. George Hodge, respectively, who are also on the executive committee of the National War Labour Board.

Conference on Dominion-Provincial War Emergency Training Program

In the March Issue of the *Labour Gazette* (page 256) a brief reference was made to the convening of a conference in Ottawa of Dominion and Provincial officials concerned in the administration of Canada's War Emergency Training Program.

At one of the sessions of the three-day meeting, R. F. Thompson, Dominion Supervisor of the program, stated that greater emphasis must be placed on the training of women for employment in industry. Lt. Col. F. T. Fairey, Regional Director for British Columbia, told the meeting that at the request of the aircraft industry, the schools in B.C. were preparing to train women workers on a large scale. He anticipated no difficulty in getting the required personnel.

The 30 training officers were welcomed by Dr. Bryce M. Stewart, Deputy Minister of Labour. During the reports of the Regional Directors, Dr. Stewart advised the various representatives in what direction they might prepare for expansion in their classes to meet future demands of industry.

In his report, Mr. Thompson said the most marked development of the last year was the increasing interest on the part of employers. At the outset they had been "indifferent to, or sceptical of the training centres" in many cases, but over the past year there had been a wide extension of part-time classes, undertaken on the specific request of employers. The latest development in this direction, the Dominion Supervisor reported, was the establishment of plant schools.

Vocational training is also to be given to persons discharged from the Armed Services, Mr. Thompson said. This program was asked for by the Department of Pensions and National Health and can be expected to expand steadily.

The report showed that 36,182 persons had been trained in the industrial classes during the 11 months ending February 28. This was slightly larger than the total for the Army and the Air Force. In January, 106 schools were operating, requiring 776 full-time instructors, 499 part-time instructors and 321 other personnel.

The War Emergency Program is giving preliminary training to all aero-engine mechanics, airframe mechanics and wireless operators. The biggest development in the R.C.A.F. classes came about through the educational refresher classes for air crew personnel begun at the end of November.

Those attending the conference were: British Columbia: Lt. Col. F. T. Fairey, Regional Director; Henry Hill, Supervisor. Nova Scotia: Dr. F. H. Sexton, Regional Director; A. C. Cooke, Chief Placement Officer. New Brunswick: W. K. Tibert, Regional Director; J. W. McNutt, Supervisor. Quebec: Gabriel Rousses, Regional Director; E. Proulx, Administrator; A. Landry, Chief Placement Officer; H. Beaupre, Director, Montreal Technical School; A. E. Gagney, P. Methe, Director Quebec Technical School. Ontario: J. F. Marsh, Deputy Minister of Labour; F. S. Rutherford, Director of Vocational Education; H. H. Kerr, Regional Director; C. C. Ashcroft, Director of Training; J. A. G. Easton, Supervisor; H. H. McBride, Chief Placement Officer; G. H. Simmons, Director of Selection and Placement. Manitoba: George Collins, Assistant Deputy Minister of Public Works; G. S. Landon, Regional Director; S. S. Mutchmor, Director of Training. Saskatchewan: W. A. Ross Regional Director; H. C. Bingham, Dominion Representative. Alberta: Dr. G. Fred McNally, Deputy Minister of Education; J. H. Ross, Regional Director; M. M. McKinnon, Dominion Representative.

Five plant schools under War Emergency Training Program receive certificates of approval

It was recently announced by the Minister of Labour that five plant training schools—one in Quebec and four in Ontario—established under the War Emergency Training Program, have received certificates of approval from the Department. These plant training schools are the first of a large number of such schools, plans for which are being developed by field representatives of the Training Branch in co-operation with the plants concerned.

Provided for under the War Emergency Training Program, the schools are designed to give "the essential amount of technical knowledge and practical skill for a specialized occupation in the shortest possible time". These schools, located within the factories requiring the help, are in addition to the pre-employment training and part-time classes conducted through the technical and vocational schools.

The Department of Labour aids directly in the establishment of the schools. Representatives of the Training Branch assist in organizing the schools for the specific training desired, and in the preparation of curricula. The Department pays the salaries of instructors and a subsistence allowance (for a maximum course of 12 weeks) to each student enrolled.

The allowances are similar to those given students in the pre-employment classes of the technical and vocational schools namely: Heads of families $13 weekly; single trainees away from home, $8 to $9 weekly; single trainees living at home and who were employed in the plant before entering the schools, $8 weekly; single trainees living at home but who were not employees of the company before entering the course, $5 weekly.

Where facilities permit the schools are conducted in a separate section of the factory and have their own machine tools and equipment. In other cases, where, because of the size of the equipment required or inability to obtain it, the schools use the equipment in the plant. The classes are carried on either during production hours or in off-shift periods when the machinery is at the disposal of the school. Throughout the course the Training Branch maintains joint supervision with the company over the school.

More than one school may be established by a company, depending on training requirements. Where this occurs, each school is

separately located and different subjects are taught. For example, one firm has a school to give instruction in production operations and another to give training in machine shop and tool room practice. It is anticipated that before the end of the year the plant schools will be established in all types of war industries, in all provinces.

Canada's War Emergency Training Program 1942-3

The importance of maintaining and increasing the supply of skilled and semi-skilled labour is indicated in the terms of an Order in Council, P.C. 2614, which provides for the continuation of the War Emergency Training Program in the fiscal year 1942-43 and makes accountable advances available to the various provinces participating.

The following accountable advances are approved in the Order:

Nova Scotia	45,000
New Brunswick	25,000
Quebec	150,000
Ontario	350,000
Manitoba	30,000
Saskatchewan	50,000
Alberta	50,000
British Columbia	55,000
	$755,000

Another Order in Council, P.C. 2615 provides for the continuation, during 1942-43, of training of aircraft mechanics and pre-enlistment education for Royal Canadian Air Force aircrew personnel. For this purpose accountable advances to participating provinces were approved as follows:

New Brunswick	20,000
Quebec	75,000
Ontario	200,000
Manitoba	40,000
Saskatchewan	60,000
Alberta	60,000
British Columbia	50,000
	$505,000

Director of Personnel Training Appointed

In the March issue of the Labour Gazette, page 254, reference was made to the establishment of courses in personnel management in Canadian universities. On April 1, the Minister of Labour announced the appointment of W. H. Clare Seeley as Director of Personnel Training to administer this program.

The new program, authorized recently by Order in Council, is a direct attack on the many labour administration problems arising in new and rapidly expanding war industries. The Minister has advocated the establishment of effective personnel departments in these plants and his plan is in line with that adopted by the Minister of Labour in Great Britain to facilitate the training of qualified personnel managers.

The Department of Labour is authorized to enter into agreements with the universities whereby the Department will pay all "reasonable costs" in connection with any such training courses it approves. It is further planned that the Department shall pay the travelling expenses of applicants who successfully complete the courses.

While designed primarily to aid the war industries, the plan is not necessarily confined to them. Experienced personnel managers will be named to act as consultants to less experienced men or to newly established departments in other plants. These consultants will be paid only the travelling expenses they incur in the work.

Mr. Seeley, a veteran of the last Great War, has been for the past fifteen years Director of Personnel for the Toronto Transportation Commission, and is chairman of the Division on Personnel of the American Transit Operating Association.

He assisted in organizing the first Industrial Relations Conferences at Queen's University. He also assisted in the organization, and was the first President, of the Personnel Association of Toronto. This latter organization and the Montreal Personnel Association have been playing, and are expected to play an even greater part in the development of personnel administration in the war and other industries as an important contribution to the war effort.

Merchant Seamen's hostels in Canadian ports

In various Canadian ports on both the Atlantic and Pacific Coasts, the welfare of seamen while ashore is being provided in the establishment of clubs or hostels.

The Navy League of Canada has organized nine hostels, probably the largest one being that in Halifax, where a $300,000 establishment is now being utilized by between 2,000 and 3,000 seamen a day. With a capacity of 450 beds, sleeping accommodation was provided for 8,129 seamen during January while the cafeteria served 33,620 meals and snacks.

Band concerts, film shows and other entertainment has been provided for many thousands and the Halifax club has afforded initial care to many men landed in distress and survivors of torpedoed ships. The club has rooms set apart for each nationality where they may speak their own language and read their own newspapers.

Paperboard manufacturers sentenced in proceedings against members of alleged combine

Four manufacturers of shipping case materials and one trade association officer, charged with unlawful combination contrary to the provisions of section 498 of the Criminal Code in the case of The King v. Badden et al., pleaded guilty to the first count of the indictment when they appeared before Mr. Justice Roach in Toronto on March 11. Fines totalling $17,000 were imposed upon H. J. Badden, Bathurst Power and Paper Company Limited, Brompton Pulp and Paper Company Limited, Gair Company Canada Limited, and Hinde and Dauch Paper Company of Canada Limited.

This action concludes the prosecution proceedings against manufacturers of shipping containers and of shipping case materials which were taken at the instance of the Attorney-General of Canada after publication of the report of the Commissioner of the Combines Investigation Act in which two unlawful combinations of manufacturers operating through trade associations were alleged to exist. Conviction of the members of the shipping container combine was upheld in February, 1942, by the Supreme Court of Canada in a judgment already reported (Labour Gazette, March 1942, page 309).

In the two cases a total of twenty-one companies and one individual were sentenced to pay fines amounting in all to $176,000, payable to the Receiver General of Canada. All of the accused in both cases were convicted or pleaded guilty to offences relating to undue lessening or prevention of competition in the manufacture and sale of corrugated and solid fibreboard boxes or shipping containers, or of liner board and other materials used in the manufacture of shipping containers.

Appointment of new Transit Controller

On April 3, Honourable C. D. Howe, Minister of Munitions and Supply, announced the resignation of W. J. Lynch as Transit Controller and the appointment of George S. Gray, Deputy Controller, to succeed to that position.

Commenting on Mr. Lynch's retirement, Mr. Howe stated that as Mr. Lynch had "now completed the organization work which he undertook some months ago, I have with regret agreed to Mr. W. J. Lynch relinquishing his duties as Transit Controller." "He had ably handled the difficulties of planning and initiating the control of Canadian transit facilities, and we shall benefit in the future from his efforts."

Since his appointment as Transit Controller, (Labour Gazette, September, 1941, page 1035), Mr. Lynch has completed a general survey of the transit facilities in the principal cities of Canada. Conferences have been held with civic authorities and with public utility commissions in the different provinces.

Owing to the curtailment in the use of gasoline and rubber, and the difficulty in obtaining new equipment, and with the object of reducing the peak load on tramways and buses, particularly in cities having war industries, military camps, or naval or aviation centres, the staggered hour system for business and industry has been adopted in many cities with satisfactory results. This policy is to be continued and will be introduced elsewhere where advisable.

Mr. Howe also announced that Jules Archambault, of Montreal, had been appointed Associate Transit Controller. To handle the increasing problems of wartime transportation as rapidly and as efficiently as possible, Mr. Gray will in future operate from Toronto, while Mr. Archambault's offices will be located in Montreal.

Until he assumed the office of Deputy Transit Controller, Mr. Gray was general manager of the Canadian Transit Association and motor traffic engineer for the Toronto Transportation Commission and the Gray Coach Lines. A native of Sault Ste. Marie, he was educated at Meaford, Ontario, and the University of Toronto. During the Great War, he served overseas with the Royal Air Force as Flight Lieutenant.

In 1918, Mr. Gray joined the Department of Soldiers Civil Re-establishment, for Alberta and Saskatchewan, and three years later he became associated with the Toronto Transportation Commission where, successively, he was field engineer, construction engineer, superintendent of construction, special engineer, and motor traffic engineer.

Mr. Archambault was born in Montreal and educated at St. Mary's College, Loyola College, and McGill University. He was graduated in 1926 as a Bachelor of Science. Upon graduation, he joined the Aluminum Company of Canada Limited, at Arvida, as technical assistant. A year later, he was transferred to the Duke-Price Power Company as engineer, and in 1929 he became associated with the Bell Telephone Company of Canada Limited. In 1937, he became chief engineer for the Montreal Tramways Commission, a post he held at the time of his new appointment.

Manpower Inventory in the United States

On March 12 the Director of Selective Service in the United States announced that about 25,000,000 men men from 22 to 44 now registered under the Selective Service System will be required to list their occupational skills which may be needed in war-production industries, by means of a special questionnaire sent out through local draft boards. The Federal Security Administrator, Mr. Paul V.

McNutt, said he hoped the questionnaires would be extended to reach all men between 18 and 64. This, he said, would give the Employment Service complete information on the skills of 40,000,000 men. When the men have filled out the forms, the local draft boards will forward them to the appropriate local employment office, where they will be examined on the basis of the Labour needs of war industries. Speaking in Washington before the Legal Aid Bureau, General Hershey, Director of Selective Service, emphasized the need for a thorough-going form of mobilization by pointing out that this is the sort of war fought by whole populations. "We have 60 million human units, male and female, adults and children, and that can contribute to winning the war," he said. "But only an infinitesimal number will go in the armed forces in the next 10 months." He reiterated his previously expressed opinion that the war effort is not being helped by different private and service groups competing over the radio and otherwise, for manpower.

U. S. Labour yields right to strike and premium pay

According to a press report, William Green, president of the A. F. of L. and Philip Murray, president of the C.I.O., have indicated that Labour in the United States has yielded its right to strike during the war. This was done, it was declared, by way of a more satisfactory answer to the problems of production and national unity than restrictive legislative enactments which might be made by Congress.

It was also recently agreed by the C.I.O. leaders that premium pay for Saturday, Sunday and holiday work should be suspended for the duration of the war. This action was taken following appeals made by President Roosevelt and the Chairman of the War Production Board, Donald Nelson, that union contract rules requiring double pay for Sunday and holiday work be suspended for the duration. Following these appeals, the C.I.O. executive board adopted a resolution which reads in part as follows:

> The executive board of the C.I.O. recommends to its affiliated organizations that during the period of the war emergency in their contractual relations with employers there be no insistence upon provisions for premium payments for work performed on Saturdays, Sundays and holidays where that work is performed within the limits of the forty-hour work week. . . It does not affect the basic truth that the furtherance of the national productive effort requires the customary premium for work in excess of eight hours in any one day and for the sixth and seventh days' work in excess of forty hours in a work week.

The President's appeal was made at conferences with the A.F. of L.-C.I.O. War Labour Board, while Mr. Nelson's appeal was made at an emergency conference of 500 C.I.O. leaders called by Philip Murray, C.I.O. president, to lay plans for combating restrictive labour legislation now pending in Congress.

Immediately following the announcement of the C.I.O.'s new policy, William Green, A.F. of L. president, issued a statement saying that the Federation had adopted a similar policy more than a year ago and that it had "already taken effect" in most cases. The statement referred particularly to agreements made by A.F. of L. building and metal trades unions.

The first response to the recommendations of the C.I.O.'s executive board came from the "general officers " of the United Electrical, Radio and Machine Workers, who announced in a newspaper advertisement that they were recommending adoption by all of their local unions of a plan calling for the waiving of time and one-half on Saturdays and double time on Sundays and holidays provided the money thus saved by employers be turned over to the Secretary of the Treasury. The advertisement explained that inasmuch as the companies had negotiated their contracts up to 1945 with the government on the basis of paying time and one-half and double time, the unions were giving up this privilege on the understanding that the savings be turned over to the government to prevent them from going to "the owners of the companies."

Among the other unions that have acted on this recommendation are the Textile Workers' Union, whose executive board accepted them by a unanimous vote and the United Automobile Workers.

Compendium of opinion in U.S.A. re maximum working hours

With the intensification and increasing extension of industrial war production in the United States, the question of the maximum number of hours of work per week consistent with the maintenance of the health and safety of workers has given rise to the expression of many opinions on the subject. The following is a compendium of opinions expressed:

President Roosevelt expressed the opinion that his studies of the efficiency of workmen have led him to the conclusion that a 48-hour week is more productive than a sixty-hour week. He referred to surveys in the United States and Great Britain and on the European continent which has shown that a man working 60 hours produces less than one working 48. He added that Henry Ford after investigating the question (*Labour Gazette,* March 1942, page 257) had said that more than 44 or 48 hours work per week did not increase the number of things produced by the individual worker.

L. Metcalfe Walling, U.S. Federal Wage and Hour Administrator, said on March 21, that

no downward revision of the minimum wage and overtime provisions of the Fair Labour Standards Act could possibly be made "without doing irreparable damage both to our production machine and to the health and efficiency of our workers operating that machine." Saying a possible shortage of labour has been cited by many as a reason for the elimination of the existing wage and hour limitations, Mr. Walling declared that, on the contrary, there was a present and impending shortage of raw materials which threatened to increase unemployment.

In an earlier interview Mr. Walling had commented, "There is literally no 40-hour week in the war industries of America today. Ninety per cent of the plants in important defence industries today are operating more than 70 hours a week. "We are not fighting this war on a 40-hour week—nor over a 40-hour week. Not when over 90 per cent of our ship-builders are working an average of more than 12 hours' overtime per man per week, when 96 per cent of the workers in the machine-tool industry are employed 56 hours a week, or when over 66 per cent of our engine builders are working an average of better than 14 hours' overtime a week."

Donald M. Nelson, Chairman of the War Production Board, in testifying before the House Naval Affairs Committee on the Smith Bill to relax Federal wage and hour legislation, said: "A work-week of 48 hours, over and above which overtime would be paid, would not increase production. Such a change would be too disturbing and would, if anything, have a harmful effect on war production."

United States employers on optimum hours of work in war production

In an effort to determine the maximum number of hours per day or week which an individual can work while maintaining his highest efficiency for the purposes of war production, the Industrial Relations Section of Princeton University gathered information and opinions from 140 companies employing approximately two million workers. The group under investigation included 16 companies in the steel industry, 15 in shipbuilding and heavy machinery, 14 in aircraft and automobiles, eight in small arms and ammunition and 20 in light machinery, tool and instrument production. Results of the study were published in March, 1942.

Practically all of the company executives interviewed agreed that weekly hours for war workers should be between 40 and 60, and "an overwhelming proportion . . . expressed the judgment that an eight-hour day and 48-hour week were the optimum hours per worker for maximum sustained production in war industries." However, consideration should be given to such factors as the physical effort involved, the speed and intensity of the work and the physical capacity of the workmen in determining the optimum number of hours for a particular group. Work-weeks over 60 hours were generally condemned on the ground that they "definitely decrease productivity and increase absences and accidents." They also lead to careless work habits and accustom the workers to unduly high earnings which they are loath to relinquish when hours are reduced.

Most executives believed that women could work a 48-hour week without detriment to their health but that their household and family responsibilities induced absenteeism if they were asked to work more than 40 hours a week.

As regards a seven-day week, companies which had experimented with it were definitely opposed to it. They reported "more accidents, decreased productivity and lowered employee morale under a seven-day week, as well as a great increase in absenteeism." It was suggested that shifts should be arranged to provide one day's rest in seven, or that Sundays be devoted only to maintenance work and relieving bottlenecks in production.

The experience of the companies revealed that accidents did not increase as rapidly or in as direct proportion to hours of work as did absenteeism. The records of some companies showed that in spite of longer hours accidents could be reduced by improved safety engineering and greater stress on accident prevention. Absenteeism and turnover could be held in check by paying more attention to the health and welfare of the workers both inside and outside the factory. Provision of adequate transportation, housing and facilities for the care of children of women workers helped to reduce absenteeism.

"The importance of adequate lunch and rest periods in maintaining a high level of efficiency, even for an eight-hour day, was stressed by a number of companies." Studies conducted in Britain showed that regular rest periods with opportunity for taking some light refreshment increased productivity markedly. The report declared:

> Considering lunch and rest periods both from the direct effect upon productivity and the indirect effect on long-time efficiency through the health of the worker, it is apparent that our war industries need to give more consideration to the possibility of longer lunch periods and more frequent use of regular rests in the determination of optimum hours for maximum defence production.

In conclusion, the report urged the necessity of expanding training programs to permit the reduction of weekly hours in war industries to the 48-hour optimum.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

REPORTS were received during the past month from the Boards of Conciliation and Investigation established to deal with the following disputes:—

1. Between the Dominion Bedding Company, Montreal, P.Q., and its employees, members of Local 302, Upholsterers' International Union; and

2. Between the Chrysler Corporation of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America.

The texts of the aforementioned reports will be found at the end of this statement.

Applications Received

In the month of March seven applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From operating engineers in the employ of the Coal Valley Mining Company, Limited, Coal Valley, Alta., members of a trusteeship. The dispute, arising out of the employing company's alleged violation of a closed shop agreement, was said to affect 15 employees directly.

2. From employees of St. Lawrence Alloys and Metals, Limited, Beauharnois, P.Q., members of Alloys and Metals Workers' Federal Union 22613, American Federation of Labor. Approximately 435 employees were said to be directly affected by the dispute, which had arisen out of their request for shorter hours of work, overtime pay, adjustments in wages and cost-of-living bonuses, seniority rights, grievance procedure and improved working conditions.

3. From employees of the Sorg Pulp Company, Limited, Port Mellon, B.C., members of Local 297, International Brotherhood of Pulp, Sulphite and Paper Mill Workers. The dispute, affecting approximately 200 employees directly, was said to have arisen out of their request for union recognition and improved working conditions. On March 16, Mr. F. E. Harrison, Western Representative of the Department of Labour, Vancouver, B.C., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute. In his report, received on March 30, the Commissioner recommended the establishment of a Board of Conciliation and Investigation to deal with the dispute. A board was established on March 31 and, on the nomination of the employees, Mr. P. R. Bengough, Vancouver, B.C., was appointed a member of the board.

4. From employees in Plant No. 3 of the Canadian Bridge Company, Limited, Ojibway, Ont., members of Local 195, United Automobile Workers of America. The dispute, arising out of the employees' request for union recognition and a collective agreement in respect to grievance procedure, seniority rights, wages, overtime pay, etc., was said to affect approximately 500 workers directly.

5. From employees of the Goodyear Tire and Rubber Company of Canada, Limited, Bowmanville, Ont., members of Local 189, United Rubber Workers of America. The dispute, arising out of the employees' request for union recognition and a collective agreement respecting wages, hours of labour, seniority rights, vacations with pay, and grievance procedure, was said to affect 320 workers directly and 75 indirectly. On March 31, Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

6. From employees of the Canadian Steel Corporation, Limited, Ojibway, Ont., members of Local 195, United Automobile Workers of America. The dispute, arising out of the employees' request for union recognition and a collective agreement in respect to grievance procedure, seniority rights, hours of labour, wages and overtime pay, was said to affect 95 workers directly.

7. From employees of the Rolland Paper Company, Limited, at St. Jerome and Mont Rolland, P.Q., members of Locals 454 and 455, International Brotherhood of Paper Makers, and Local 106, International Brotherhood of Pulp, Sulphite, and Paper Mill Workers. The dispute was said to have arisen out of the employees' request for union recognition and a collective agreement in respect to wages and working conditions. The application also alleged that the employing company had committed unfair labour practices. Approximately 760 employees were said to be directly affected by the dispute.

Boards Fully Constituted

The constitution of the Boards of Conciliation and Investigation established in

February to deal with disputes between the Granby Consolidated Mining, Smelting and Power Company, Limited, the Princeton Tulameen Coal Company, Limited, and Tulameen Collieries, Limited, all of Princeton, B.C., and their respective employees, members of Local 7875, United Mine Workers of America (Labour Gazette, March, 1942, page 262) was completed during the month of March. The personnel of the boards is as follows: His Honour Judge H. H. Shandley, Victoria, B.C., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; C. E. Smith, K.C., Calgary, Alta., appointed on the nomination of the employees. F. W. Guernsey, Vancouver, B.C., appointed on the nomination of the employers.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

On March 14 Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Champion Spark Plug Company of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America, in connection with which an application had been received in February for the establishment of a Board of Conciliation and Investigation (Labour Gazette, March, 1942, page 261).

On March 23, Mr. H. R. Pettigrove, Labour Relations Officer of the Dominion Department of Labour, Fredericton, N.B., was authorized, as Industrial Disputes Inquiry Commisssioner, to investigate a dispute between the Cumberland Railway and Coal Company, Springhill, N.S., and its employees, members of Local 4514, United Mine Workers of America. Particulars concerning strikes which occurred in connection with this dispute will be found in the article entitled "Strikes and Lockouts in Canada during March, 1942" appearing elsewhere in this issue.

On March 27, Mr. Bernard Rose, K.C., Montreal, P.Q., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Canadian Vickers, Limited, Montreal, and employees in its Marine Division, members of Local 2524, Steel Workers Organizing Committee, in connection with which an application was received in November, 1941, for the establishment of a Board of Conciliation and Investigation (Labour Gazette, December, 1941, page 1467). Action on the application had been deferred pending a decision by the National War Labour Board on the question of wage rates in the shipbuilding industry in the Provinces of Quebec and Ontario.

On March 31, Mr. James Leslie, Chief Conciliation Officer of the Manitoba Department of Labour, Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate disputes involving the City Dray Company, Limited, and the Security Storage Company, Limited, both of Winnipeg, and their respective employees, members of Division 205, Canadian Brotherhood of Railway Employees and Other Transport Workers, in connection with which applications had been received in February for the establishment of Boards of Conciliation and Investigation (Labour Gazette, March, 1942, page 261).

Other Reports of Industrial Disputes Inquiry Commissioners

On March 2 a report was received from Mr. F. E. Harrison, Industrial Disputes Inquiry Commissioner, on his investigation of the allegation by an official of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America that Western Canadian Greyhound Lines, Limited, Calgary, Alta., had practised intimidation for the purpose of interfering with the right of its employees to organize and to belong to the trade union of their choice (Labour Gazette, March, 1942, page 262). The Commissioner reported that no evidence had been adduced before him to substantiate the charge which had been made against the employing company.

On March 5 a report was received from Mr. F. E. Harrison, Industrial Disputes Inquiry Commissioner, on his investigation of an allegation by Shipyard Union No. 2, Amalgamated Building Workers of Canada, that the Burrard Dry Dock and Shipbuilding Company, Limited, Vancouver, B.C., had practised discrimination in the discharge of a foreman (Labour Gazette, March, 1942, pages 262-263). The Commissioner reported that he had been successful in bringing about the re-employment of the workman involved, as a shipwright, with the prospect of eventual employment in his former capacity.

On March 19 a report was received from Mr. Louis Fine, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Auto Specialties Manufacturing Company, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America. The Commissioner reported that mutual agreement was being reached by the interested parties and that the union had withdrawn its complaint against the employing company.

On March 24 a report was received from Mr. Louis Fine, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Motor Products Corporation, Walkerville, Ont., and its employees, members of Local 195, United Automobile Workers of America (Labour Gazette, January, 1942, page 9). Particulars of a strike which occurred before the investigation was completed will be found in the article entitled "Strikes and Lockouts in Canada during March, 1942" appearing elsewhere in this issue. The Commissioner reported that a settlement of the dispute had been reached and that the employees had withdrawn their application for the establishment of a Board of Conciliation and Investigation. The settlement provided that the employing company would negotiate a collective agreement with the bargaining agency to be selected by a secret ballot of the employees concerned. Subsequently the employees voted in favour of the applicant union as their collective bargaining agent.

Other Settlements

The Department of Labour has been notified that the recommendations of the Board of Conciliation and Investigation established to deal with a dispute between the Speirs Parnell Baking Company, Limited, and the Canada Bread Company, Limited, Winnipeg, Man., and their employees, members of the Legislative Council of Bakery Salesmen and Inside Bakery Employees' Unit, One Big Union (Labour Gazette, February, 1942, pages 139-147), have been accepted by the parties concerned as a basis for the adjustment of the dispute.

With reference to the previously reported settlement of a dispute between Lakeside Coals, Limited, Wabamun, Alta., and its employees, members of Local 7894, United Mine Workers of America (Labour Gazette, March, 1942, page 262), notification has been received that the interested parties have signed an agreement and the employees' application for the establishment of a Board of Conciliation and Investigation has been withdrawn.

Report of Board in Dispute between Dominion Bedding Company, Montreal, P.Q., and Its Employees

On March 14 the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Bedding Company, Montreal, P.Q., and its employees, members of Local 302, Upholsterers' International Union (Labour Gazette, November, 1941, page 1342).

The personnel of the board was as follows: The honourable L. A. Rivet, Outremont, P.Q., chairman, appointed on the joint recommendation of the other two members; Mr. Raoul Trepanier, Montreal, appointed on the nomination of the employees; and Mr. E. Theoret, Beauharnois, P.Q., appointed on the nomination of the employer.

A translation of the board's report is printed below.

Report of Board

(*Translation*)

The Honourable Humphrey Mitchell,
Minister of Labour,
Government Bldgs.,
Ottawa, Canada.

Re: Industrial dispute between the Dominion Bedding Company and its employees, members of the Upholsterers' International Union, Local No. 302.

Sir,—

The undersigned members of the Board of Conciliation and Investigation, established in the above matter, having taken the prescribed oath of office, proceeded with the investigation of the dispute.

A representative of the Dominion Bedding Company having questioned, in a brief which we submitted to you, at the Board's first meeting said body's powers, in view of the various Orders in Council adopted recently, it was decided to bring to your attention, for direction, the objections thus made. Your department having found the objections unacceptable, we proceeded with the investigation.

At the outset of the first meeting, Mr. Belanger, the Union's Business Agent, stated that all complaints listed in the Board application were abandoned with the exception of that relating to wages.

During the Board's sittings of November and December, 1941, many of the company's employees were heard, and since most of them claimed that the rates paid by the Dominion Bedding Company were lower than those of other firms manufacturing the same or similar products, particularly those having agreements with the Upholsterers' International Union, we considered it advisable to make comparisons in order to find out if such claims were founded or not.

The Board, therefore, called before them a representative of each of the following firms:—

Simmons, Limited: Manufacturing beds, springs, mattresses, pillows and other similar articles, goods of high quality;

Atlas Bedding Company, Limited: Manufacturing beds, springs, mattresses and upholstered articles;

St. Louis Bedding Company, Limited: Manufacturing same type of articles;

Ideal Bedding Company, Limited: Manufacturing same type of articles;

Nu-Bilt Chesterfield Manufacturing Company, Limited: Manufacturing upholstered articles only.

It should be pointed out that Simmons, Limited, manufactures merchandise of superior quality to that of the other firms, and has no labour agreement with any union whatever.

It should also be noted that Atlas Bedding Company, Limited, St. Louis Bedding Company, Limited, and Nu-Bilt Chesterfield Manufacturing Company, Limited, have agreements with the Upholsterers' International Union, while neither the Ideal Bedding Company, Limited, nor the Dominion Bedding Company has an agreement with the union, and are openly opposed to coming under its power.

It was evident, after hearing the representatives in question, that the internal organization differed substantially in the case of each of the firms, and we therefore requested them to produce copies of their respective paylists for the first two weeks in June and in November.

From a comparison of said lists the following average hourly rate is shown:—

	Simmons	Dominion Bedding
1st week in June....	·47	·3926
2nd week in June....	·47¾	·3932
1st week in Nov.....	·51¾	·4656
2nd week in Nov.....	·51¾	·4612

We attach hereto, as an appendix, a table giving the average hourly rate in each department.

Leaving out Simmons, Limited, which can be considered in a class of its own, it appears that, generally speaking, the Dominion Bedding Company was paying in June an average rate 1 cent below that of the Atlas Bedding Company, but, on the other hand, had in November a rate 4 cents an hour above that of the same firm, notwithstanding that the Atlas Bedding had an agreement with the International Union, which the representatives of the latter find satisfactory.

With regard to the St. Louis Bedding Company, it is noted that said firm was paying 9 cents an hour more in June, a difference which was down to 2·7 cents in November. That, however, might be explained by the fact that the Dominion Bedding Company had few upholsterers, namely 8 in June and 5 in November, while the St. Louis Bedding Company had 35 in the first month mentioned and 37 in November, and since the rate paid such workers is higher than in all other trades, the average is therefore increased to that extent. It should also be said that the St. Louis Bedding Company has an agreement with the Upholsterers' International Union.

In the comparison with the Ideal Upholstering Company, it is shown that the average rate paid by the Dominion Bedding Company was nearly 7 cents an hour higher in June and 11 cents in November.

As to the Nu-Bilt Chesterfield Manufacturing Company, Limited, they were paying in June an average rate of from 5 to 6 cents higher than that of the Dominion Bedding Company, while in November the Dominion's average rate was nearly 2 cents an hour higher than the Nu-Bilt's. It should also be remembered that the Nu-Bilt Company employs only upholsterers, and since their rate is above that for the other trades, the difference in rates should naturally be more pronounced here, while the average rate indicated for November is lower. We understand the Nu-Bilt Company has an agreement with the Upholsterers' International Union.

Having fully considered the above, we feel we can but conclude that, at the time of its labour troubles last June, the Dominion Bedding Company was paying reasonable rates, comparing favourably with those of similar industries, and that said Company

Atlas	St. Louis	Ideal	Nu-Bilt
·4025	·4886	·3286	·44
"	·4851	—	·46
·4524	·4844	·3532	·44
—	·4972	—	·45½

worked steadily to improve its employees' welfare.

The labour disturbances at the Dominion Bedding Company resulted from friction between employers and workers which is to be expected when a group of employees endeavour to bring in a union and the employers resent any interference.

To avoid future disputes of the nature we are concerned with, and in order to make the rates uniform in the various establishments, as quite a difference in rates is shown from one establishment to the other, it would be advisable that the industry organize under the collective labour agreement system and that a Joint Committee be established wherein employers and employees can settle in a friendly atmosphere all matters of concern to them, since it is in the men's as much as in the employer's interest that relations remain ever the best and be inspired by Christian kindliness.

M. for male. F. for female.

Before closing, we wish to mention that we had requested from Mr. Wilfred Belanger, the Business Agent of the Upholsterers' International Union, Local No. 302, a list of the members in good standing employed by the Dominion Bedding Company, but instead he supplied us with a number of supposed application cards, of which we counted 234, very many of them unsigned. Of that number, 116 dated June 4 to 19, 1941, could be identified with the June 17 paylist of the Dominion Bedding Company. Another lot of 53 cards could not be identified with the paylist, and of those, 27 were dated June 4 to 19, and the rest, July 11 to September, 1941. The cards do not appear to have been entered in the union's books, as they bear no reference numbers. A third lot of 65 cards could not be identified with the paylist: 44 did not indicate the employer's name; 47 were dated May 28 to June 17, and the others, June 23 to September 18, while 6 had no dates. It was mentioned in the application for a Board that 275 employees of the Dominion Bedding Company were members of the union, whereas if all cards dated May 28 to September 18 submitted are considered, there were only 234, while at the date of the June 23 meeting, always on the basis of the cards submitted, the number was only 190, out of which, however, only 116 could be identified with the June 17, 1941, paylist.

As to the other complaints, as previously mentioned, they were abandoned at the start of the proceedings; but it is found on examination, however, that they were also greatly exaggerated, perhaps without any undue intent and probably as the result of the then overexcitment which had the tendency of magnifying the wrongs attributed to the other party.

Due to wholly uncontrollable circumstances, this report could not be prepared earlier. We sincrely regret the fact, but nevertheless hope that it may help in clearing up an unfortunate situation.

All of which is respectfully submitted.

Montreal, March 6, 1942.

Report of Board in Dispute between Chrysler Corporation of Canada, Limited, Windsor, Ont., and Its Employees

On March 21 the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation to deal with a dispute between the Chrysler Corporation of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America (LABOUR GAZETTE, March, 1942, page 262).

The personnel of the board was as follows: the Honourable Mr. Justice J. G. Gillanders of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Mr. W. G. Thomson, Windsor, Ont., appointed by the Minister of Labour on behalf of the employing company in the absence of a nomination from the company.

The text of the board's report is printed below.

Report of Board

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Chrysler Corporation of Canada, Limited, (Employer), and its employees being members of Local 195, United Automobile Workers of America (Employees).

The Board of Conciliation and Investigation established in the above matter begs to submit its report.

The Board met in Windsor on the 9th, 10th and 11th days of March, 1942. Both the union and the company were ably represented by counsel and both filed with the Board written submissions setting out their respective views.

The applicant union was represented by J. L. Cohen, K.C., as counsel, George Burt, Regional Director, U.A.W.A., Cyril D. Prince, chairman of the Local 195, U.A.W.A., and E. Mitzen, a member of the employees' committee of Local 195, U.A.W.A. The company was represented by J. B. Aylesworth, K.C., as counsel, Kenneth Crittenden, Vice-President and Operating Manager, and A. F. Fuerth, Personnel Manager.

The dispute involved was one as to union recognition. The applicant union claimed recognition as the exclusive collective bargaining agency for all the company's hourly-rate employees and the completion by the company with the union of a collective bargaining agreement on behalf of all such employees. There was no criticism of wages, hours of work, working conditions of employees or appurtenant matters voiced before the Board, and the issue was limited as above noted to the recognition of the union as sole bargaining agent.

The main principles which should be recognized and followed by this Board respecting the right to bargain collectively have been too clearly and too frequently stated and elaborated upon by various other Boards of Conciliation to call for discussion or amplification here. They are succinctly stated in, and

approved by, Order in Council P.C. 2685 (June 19, 1940), with particular reference to paragraphs 5, 6, 7 and 9 thereof.

This Board recognizes these principles and reaffirms them. The dispute here does not involve a consideration of the desirability of these principles as such, but rather, with these principles in mind, whether or not the applicant union should or should not, under the circumstances here, be recognized as the sole bargaining agent of the employees.

The Union submitted that it represented a majority of the company's employees; that there was no other organization of the company's employees claiming bargaining rights, and that, therefore, this union should be recognized as the exclusive bargaining agent for all employees. In any event the union submitted that it should be recognized as the bargaining agent for those of the employees who were members of the union. The union further submitted that if there was doubt, or if it was not established that the union represented a majority of the company's employees, of a sufficient number to be entitled to recognition as bargaining agent, this Board should take or recommend the taking of a vote by secret ballot under proper auspices to determine this question.

The company objected to treating with the applicant union as the sole collective bargaining agency for its employees for several reasons. Stated in brief these were:—

(*a*) Because the history of the applicant union indicated it was irresponsible and the company lacked confidence in it; that it was neither in the interests of the company nor its employees to accord to this union recognition as a bargaining agent and that such recognition would, in the opinion of the company, bring about difficulties and interference which at present did not exist.

(*b*) That the application in truth and fact did not emanate from the company's employees desiring to bargain collectively, but was the result of the previously stated policy of the International Union, to which this local belongs, to press the organization of this company's employees. The company submitted that a campaign to this end had been carried on, and inferred that it was for the benefit of the union rather than the company's employees.

(*c*) The company doubted whether the union in fact represented any substantial number of its employees.

(*d*) It was also submitted that a demand for union recognition was not a dispute within the Industrial Disputes Investigation Act and therefore should not be recognized by this Board.

As to this last mentioned submission that the question is not a dispute within the meaning of the Industrial Disputes Investigation Act, it may be that substantial and logical arguments could be advanced to support this view. This question was, however, raised by the company prior to this Board being established. The order establishing the Board recites, inter alia—

> "And Whereas the Minister of Labour, Canada, hereinafter called the Minister, is satisfied that the said dispute is one to which the provisions of the said Act apply."

In the opinion of the Board the question is not one to be considered by this Board and it should be assumed by the Board that the dispute is one within the ambit of the Act and dealt with as such.

As to whether or not the applicant union represents a substantial number of the company's employees, it was in evidence before the Board that at the time the application for this Board was filed there were 2,596 hourly-rated employees, exclusive of foremen, in the company's Windsor plants, and at the time of the Board's hearing this number had increased to 2,871. Evidence was also submitted to show that, on the 8th of December, 1941, when the application was made for the establishment of this Board, 1,508 employees of the company were members in good standing of the applicant union, and at the date of the hearing this number had been increased by an additional 66 employees, making a total of 1,574.

The company called the attention of the Board to reports indicating that at the Sixth National Convention of the U.A.W.A., a resolution was adopted authorizing the establishment of a committee to effectuate organization machinery with special attention to the Province of Ontario and the City of Windsor, "particularly" (among others) "Chrysler Plants".

It may well be that the union has been active in the organization of the company's employees here concerned, and in fact union representatives did not contend otherwise but submitted that this was within the rights of labour and that such organization was right and proper. The application before the Board is one on behalf of certain employees of the company, and the Board is of opinion that, under the circumstances here, it must be viewed in that light.

With reference to the apprehensions expressed on behalf of the company as to negotiating with the applicant union, the Board has in mind that it should be recognized that employees are to be free to organize in trade unions of their own choice.

Under the circumstances here the Board does not deem it necessary to recommend the taking of a vote among the employees.

Upon consideration of all the facts presented before the Board and submissions made, the Board recommends that the applicant union be recognized not as the exclusive bargaining agent on behalf of all the company's employees, as claimed by the applicant union, but as the bargaining agent on behalf of the hourly-rated employees of the company who are members of the union only, and that negotiations be entered into with a view to the conclusion of a collective agreement accordingly.

In parting with the matter the Board desires to express its appreciation to the parties concerned for the very helpful presentation made of their submissions.

All of which is respectfully submitted.

(Sgd.) J. G. Gillanders,
Chairman.
(Sgd.) W. G. Thomson,
Member.
(Sgd.) Drummond Wren,
Member.

Dated at Windsor, Ontario,
this 11th day of March,
A.D. 1942.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1942

THE following table shows the number of disputes, workers involved and time loss for March, 1942, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*March, 1942	18	3,770	23,191
*February, 1942	16	2,901	23,997
*March, 1941	11	1,135	3,515

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While there was a slight increase in the number of strikes and lockouts during March and an appreciable increase in the number of workers involved, the time loss in man working days was practically unchanged. The time loss in March was due chiefly to strikes of coal miners at Springhill, N.S., bakers at Montreal, automobile parts factory workers at Windsor and biscuit factory workers at Vancouver. In February most of the time loss was due to two strikes involving gold miners at Kirkland Lake, Ont., and textile factory workers at Lachute Mills, P.Q. In March, 1941, the only strike of importance involved tannery workers at Oshawa and caused time loss of 1,250 days.

Three disputes, involving 331 workers, were carried over from February and fifteen commenced during March. Of these 18 disputes 16 were terminated during the month. Four resulted in favour of employer, four in favour of workers, one in a compromise settlement, while seven were indefinite in result. At the end of the month, therefore, there were two strikes or lockouts recorded as in progress, namely: bakery workers, Montreal, P.Q., and biscuit and candy workers, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one dispute of this nature, namely: truck drivers and helpers, Toronto, Ont., one employer, October 7, 1941, to December 31, 1941.

A strike of seven employees in a dress factory in Montreal on February 5 was not reported in time for inclusion in the Labour Gazette for March. A number of employees ceased work to secure union recognition and in protest against the dismissal of one worker. Conciliation by the Department did not result in a settlement but those on strike secured work with other employers.

A stoppage of work in several boot and shoe factories in Toronto on March 9 was reported to have been agreed upon by the employers and the union in order to negotiate a cost-of-living bonus, a joint request for approval to be made to the Regional War Labour Board for Ontario.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to March, 1942				
MANUFACTURING—				
Miscellaneous Wood Products				
Sash and door factory workers, Vancouver, B.C.	1	17	85	Commenced Feb. 24, 1942; for union recognition, 44-hour week, also cost of living bonus; terminated March 7: return of workers and replacement; in favour of employer.
Metal Products—				
Automobile parts factory workers, Windsor, Ont.	1	215	2,000	Commenced Feb. 23, 1942; for union recognition; conciliation (Provincial); terminated March 17; work resumed pending vote *re* union; in favour of workers.
Metal workers, St. Thomas, Ont.	1	99	396	Commenced Feb. 27, 1942; for cost of living bonus; terminated March 5; conciliation (provincial); return of workers pending inquiry; indefinite.
(b) Strikes and Lockouts commencing during March, 1942				
LOGGING—				
Loggers, Chilliwack, B.C..	1	27	27	Commenced March 9; for increase in piece rates in poor timber; terminated March 9; negotiations; adjustments made; in favour of workers.
MINING—				
Coal miners, Springhill, N.S.	1	22	308	Commenced March 9; against working with an official; terminated March 24; work resumed pending investigation; indefinite.
Coal miners, Springhill, N.S.	3	1,700	13,600	Commenced March 16; against suspension of employees on strike March 9; terminated March 24; work resumed pending investigation; indefinite.
Coal miners, Glace Bay, N.S.	1	(*a*) 32	96	Commenced March 23; against working under certain conditions; terminated March 26; work resumed pending investigation; indefinite.
Coal miners, Minto, N.B...	1	128	256	Commenced March 24; against doing extra work; terminated March 25; return of workers; in favour of workers.
MANUFACTURING—				
Vegetable Foods, etc.—				
Bakers, etc., Montreal, P.Q.	11	235	2,500	Commenced March 7; for union recognition and agreement on wages and working conditions; unterminated.
Biscuit and candy workers, Vancouver, B.C.	1	62	1,200	Commenced March 9; alleged discrimination against union workers on seniority and staff reduction; unterminated.
Tobacco and Liquors—				
Tobacco workers, Chatham, Ont.	1	180	270	Commenced March 9; for wage increases and cost of living bonus; terminated March 10; conciliation (federal); compromise.
Boots and Shoes—				
Shoe workers, Quebec, P.Q.	1	45	400	Commenced March 16; for adjustments in wages; terminated March 25; conciliation (federal); wage scale to be referred to Regional War Labour Board; indefinite.
Shoe workers, Montreal, P.Q.	1	60	750	Commenced March 16; for dismissal of a supervisor; terminated March 30; negotiations; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1942*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(b) Strikes and Lockouts commencing during March, 1942—*Concluded*				
Textiles, Clothing, etc.—				
Knitting mill workers, Toronto, Ont.	1	683	768	Commenced March 16; for increase in cost of living bonus; terminated March 17; conciliation (federal); in favour of workers.
Cotton factory workers (dyers), Valleyfield, P.Q.	1	15	15	Commenced March 23; for increased wages; terminated March 23; negotiations; in favour of employer.
Miscellaneous Wood Products—				
Sawmill workers, Riviere Nouvelle, P.Q.	1	100	100	Commenced March 6; for increased wages; terminated March 6; negotiations; work resumed pending reference to War Labour Board; indefinite.
Box factory workers, Penetanguishene, Ont.	1	40	200	Commenced March 21; for increased wages; terminated March 26; conciliation (federal); reference to War Labour Board; indefinite.
Miscellaneous—				
Flax workers, Vaudreuil, P.Q.	3	110	220	Commenced March 23; for increased wages; terminated March 25; return of workers and replacement; in favour of employer.

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for the annual review.

† In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 450 indirectly affected for one day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to March

Sash and Door Factory Workers, Vancouver, B.C.—Employees in one establishment ceased work at noon on February 24, the employer having refused to accept the award of a board under the British Columbia Industrial Conciliation and Arbitration Act, reported to have recommended recognition of the International Woodworkers of America, 44 hours per week, etc.; also to obtain a cost of living bonus. The employer reported that the workers would not wait until authority to pay the bonus had been obtained from the Regional War Labour Board. On March 7 the union members voted to call off the strike and obtain work with other employers. It was reported that some of those on strike returned to work on March 9 and the others were replaced.

Automobile Parts Factory Workers, Windsor, Ont.—The strike of employees in one establishment on February 23 for recognition of the United Automobile Workers of America was terminated as a result of conciliation by an Industrial Disputes Inquiry Commissioner and work was resumed on March 19. It was arranged that employees on strike would be reinstated without discrimination, as required and according to seniority, and that the Commissioner would take a vote of the employees as to whether they wished to be represented by the union or the plant employees' association, the company to negotiate with the organization for which the majority voted. The vote was 230 for the union and 55 for the employees' association. The company reported that 100 of the strikers had been replaced early in the dispute.

Disputes Commencing During March

Coal Miners, Springhill, N.S.—On March 9, twenty-two miners refused to work under a new foreman but returned to work next day under instructions from the union, any grievances to be dealt with under the agreement. The Company, however, suspended them and on March 16 the men in three collieries ceased work in sympathy with the suspended miners. Under instructions from the union all resumed work on March 24. A conciliation officer of the Department investigated the dispute and learned that the union had arranged to deal with the dispute and refer any matters not settled to the Joint Adjustment Board, as provided in the agreement.

Bakers, etc., Montreal, P.Q.—A number of bakers in several establishments ceased work on March 7 for recognition of the international Bakers and Confectioners' Union with an agreement as to wages and working conditions. Eighteen men were reported to

have been arrested on March 11 on a charge of loitering on the streets at night. Picketing during the morning and afternoon, however, was carried on. It was reported that 40 of the strikers had returned to work, that others had been partially replaced and that workers were not needed owing to the restrictions in force on the varieties of bread. Negotiations for a settlement toward the end of the month were not successful as the master bakers refused to dismiss the new men taken on, although willing to take back as many of those on strike as were required.

Biscuit and Confectionery Workers, Vancouver, B.C.—A number of the employees in one establishment ceased work on March 9, claiming that the employer had discriminated against union workers in regard to seniority and in a recent reduction in staff owing to the restrictions on the use of sugar. An agreement with the Bakery and Confectionery Workers' International Union of America was to be in force until August 31, 1942. There was also a complaint against four women of Japanese origin who had been made supervisors. These resigned after the strike occurred. A settlement had not been reported at the end of the month.

Tobacco Workers, Chatham, Ont.—Approximately half of the employees in a tobacco factory engaged in grading and packing leaf tobacco ceased work at noon on March 9 to obtain increases in piece rates and a cost of living bonus of $3.65 per week. A representative of the Department had been requested to investigate the dispute and arrived just before the strike occurred. Following conferences with representatives of the employees and the management a cost of living bonus of $2.25 per week for adult males and 9 per cent for females was offered to cover the increase in prices since wages were last adjusted and work was resumed by a large number of those on strike on March 11. The payment of the bonus was subject to approval by the Regional War Labour Board for Ontario.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March, 1941, issue, in the review of "Strikes and Lockouts in Canada and other Countries, 1940". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the Labour Gazette, August, 1940, page 760.

The number of disputes beginning in January was 57, and 5 were still in progress from the previous month, making a total of 62 disputes in progress during the month; 17,100 workers were involved in the disputes in progress during the month and the time loss was 59,000 working days.

Of the 57 disputes beginning in January, 7 arose out of demands for increased wages and 22 over other wage questions; 2 over working hours; 10 over questions as to the employment of particular classes or persons; 15 over other questions as to working arrangements; and one was a sympathetic strike. Final settlements were reached in 54 disputes of which 11 were settled in favour of workers, 28 in favour of employers and 15 resulted in compromises; in 6 other disputes work was resumed pending negotiations.

Chile

A strike of 5,000 employees of El Teniente Copper Mine was in progress from February 19 to March 12. The demand was for an increase in wages of seven pesos a day, the company offering an increase of five pesos. The terms of the settlement were not published.

United States

Preliminary figures show the number of strikes beginning in February as 190, involving 57,000 workers in new strikes. The time loss for all disputes in progress during the month was 425,000 working days.

After a two weeks' strike over a union organization dispute, 18,000 employees of textile mills at Fall River, Massachusetts, voted to return to work April 7.

ESTABLISHMENT OF NATIONAL SELECTIVE SERVICE IN CANADA

Complete Mobilization of Man-power for Service on Military, Industrial and Agricultural "Fronts" Provided in Series of Orders in Council Announced by Prime Minister—Measures to Build Potential Reserves.

THE extension of National Selective Service "to effect the orderly and efficient employment of the men and women of Canada for the varied purposes of the war" was announced by the Prime Minister, Rt. Hon. W. L. Mackenzie King, in the House of Commons on March 24.

Briefly, the policy of war-time mobilization of man-power and woman-power, which became effective on March 23, provides for the direction of Canada's utmost effort on the three major fronts—the active service front, the industrial and labour front and the agricultural front. The salient facts in the mobilization of the country's human resources may be summarized as follows:—

(1) The Minister of Labour has been assigned the primary responsibility for extending National Selective Service with the direction and co-ordination of the policy vested in a Director of National Selective Service and an Associate Director.

(2) Sharing in the allocation of man-power are the Departments of National Defence (Navy, Air, Army), Munitions and Supply, National War Services, Pensions and National Health, and Agriculture.

(3) The work of the participating Departments will be closely integrated by the Interdepartmental Committee on Labour Co-ordination (recently strengthened by the employer-employee representation on the executive of the National War Labour Board. See this issue, page 385).

(4) Advising on major questions of policy will be the National Selective Service Advisory Board comprising the membership of the Interdepartmental Committee on Labour Co-ordination and the complete panel of the National War Labour Board together with representatives of agriculture and of women and such other persons as the Minister of Labour may designate.

(5) An inventory of man-power will be maintained through a central registry established in the Department of Labour, and based upon the records of the Unemployment Insurance Commission and the 1940 National Registration.

(6) Mobilization of industrial man-power will be effected through the agency of the Employment Service of Canada.

(7) Recruitment for active service continues as before under the Defence Departments, with the calling up of men for compulsory training remaining the responsibility of the Department of National War Services.

(8) Appeals from the compulsory or restrictive regulations are to be decided by the 13 National War Service Boards, with a possible increase in this number.

(9) The right of appeal is accorded not only to employers, employees, and farm labourers, but also to interested Government departments.

(10) Man-power reserves for war service and industry will be increased by:—

(*a*) Accelerating the program of curtailing civilian production and the attendant shifting of labour into some form of war service.

(*b*) Extending training, re-training and upgrading of working forces.

(*c*) Re-conditioning the physically unfit.

(*d*) Bringing women into industry.

(11) By a scheme of training for personnel management, supervisors are to be made available to war industries.

(12) The age limit for compulsory service has been raised from 24 to 30 years for men unmarried as of July 15, 1940, selection to be by lot over the entire age range.

(13) There will be stabilization of employment in agriculture.

(14) There will be prohibition of entry into a schedule of restricted occupations and industries by physically fit men of military age.

Text of Prime Minister's Announcement

The details of the comprehensive plan were announced in the House of Commons on March 24 in the following address by the Prime Minister:—

Mr. Speaker, the speech from the throne at the opening of the present session of parliament contained the following paragraph:

> The government's policy of national selective service will be extended, as generally and rapidly as may be necessary to effect the orderly and efficient employment of the men and women of Canada for the varied purposes of war. You will be advised of the means the government proposes to adopt to effect as complete as possible a mobilization of the material

resources and man-power of the country in direct furtherance of a total national effort.

I propose in the statement I am now about to make to set forth means the government proposes to adopt to effect increased mobilization of the man-power of the country in direct furtherance of a total national effort, and to outline the measures themselves as already adopted.

Modern total war is not confined to the struggle between opposing armies and navies and air forces. It is a struggle between whole peoples, in which all of each nation's resources, both human and material, must be mobilized and brought into action. It is therefore a misconception to assume that the war-time man-power problem is merely a problem of raising men for the armed forces. This is only a part, and not necessarily the most difficult part, of the problem of mobilizing the man-power of a nation for modern war.

Man-power—and in that term I include woman-power—is required for many and varied tasks. In the first place, essential civilian services must be maintained as the foundation of community life on which the war effort rests. These essential tasks are a form of service just as truly as making munitions or serving in the armed forces. In order, however, to free younger men for direct war service, civilian tasks, as far as may be possible, should be performed by older men or by women.

The production of food, in war time, is one of the most essential civilian tasks. To the extent that food is produced for Britain, or other allied countries, or for Canada's own fighting men, it is a direct war service. If this aspect of Canada's total effort is not to suffer, the man-power required for food production must be kept available.

The man-power requirements for munitions production must also be filled. Some 600,000 workers are already engaged in the production of munitions. It is estimated that in the course of the next twelve months an additional 100,000 workers will be required.

In the armed forces our estimated requirements for the ensuing twelve months are a further 13,000 men for the navy, 90,000 to 100,000 for the active army, and 70,000 to 80,000 for the air force. These figures were given to parliament on February 10th by the Minister of National Defence. In addition, men will continue to be called up for military service within Canada; and this on a considerably increased scale.

Definition of National Selective Service

When, on January 26, I announced the war program for the coming year, I stated that the men and women required to carry out the program would be mobilized by an extension of the application of national selective service.

It might be helpful were I to repeat the definition I then gave of national selective service as understood by the government.

By national service is meant any form of service, either voluntary or compulsory, which contributes directly to Canada's war effort. By national selective service is meant the selection of men and women for the various forms of national service according to the method or methods calculated to produce the most satisfactory results.

In order to be selective, national service does not necessarily need to be compulsory. The selective aspect applies also to voluntary service. The army, for example, does not accept every man who offers to enlist. As a war measure, compulsion is only of value where it serves to ensure a greater total effort.

Organization and Administration of National Selective Service

In speaking on the war program in January, I made it clear that the extended application of compulsion to national selective service was a highly complicated matter, one which required very careful planning and organization. I also stated that, to carry out the proposed measures equitably and efficiently, the administrative machinery would necessarily be intricate and complicated.

Final responsibility for the allocation of man-power, as for all other phases of our war program, necessarily rests with the war committee of the cabinet. The war committee determines, in all its aspects, the scope and extent of the war program. The distribution of men and women among the various kinds of war service obviously depends upon the war program. The objectives are set forth in the program. National selective service is a method employed to help achieve these objectives.

To the problems of mobilizing man-power, the war committee has given close and continuous attention. Under the authority of the war committee, a special committee of the cabinet on man-power, presided over by the Minister of National War Services, has given detailed study to the problems involved. The recommendations of this committee have in turn been carefully considered by the whole cabinet.

I shall now set forth the procedures and measures which have been taken to organize and administer the government's policy of national selective service.

The primary responsibility for the extended scheme of national selective service has been placed upon the Minister of Labour. Under the Minister of Labour, the administrative responsibility for the direction and coordination of the policy has been vested in a director of national selective service and an associate director. Mr. Elliott M. Little has been appointed the Director of National Selective Service, and Mr. Paul Goulet, the Associate Director.

The responsibility for increasing the total man-power available for war service has been largely centred in the Department of Labour. It would not, however, be possible, even if it were desirable, to centralize in one department of government all the administrative responsibility for allocating man-power, and for directing men and women into the most useful form of service.

The other departments of government which share in greater or less degree in the tasks of making man-power available for war service and in the allocation of the available man-power are the departments of National War Services, Pensions and National Health, Munitions and Supply, Agriculture, and the three Defence departments. The interdepartmental committee on labour coordination, on which all these departments are represented, assists in coordinating the functions of the various departments, in so far as they relate to the mobilization of man-power. The committee has been strengthened by the addition of the employer and employee representatives on the executive of the National War Labour Board.

A national selective service advisory board has been established to advise on major questions of policy. This board includes, in addition to the members of the labour coordination committee, the full membership of the National War Labour Board and such other persons as the Minister of Labour may designate. This latter provision will ensure the representation on the board of the agricultural community and of women.

In the program of national selective service, extensive use is being made of the facilities of the Employment Service of Canada. In each area covered by an employment and claims office of the Unemployment Insurance Commission the director of national selective service will shortly appoint a national selective service officer. The national selective service officers will have local charge of the administration of the selective service program for their respective areas. They will be advised and assisted in their work by voluntary unpaid citizens' committees which will be set up in each of the areas.

A central registry has been established in the Department of Labour to aid in promptly finding the appropriate men and women needed at any particular time. The registry is based upon the unemployment insurance records, and the records of the 1940 national registration. To the registry will be added the records of such further surveys of man-power as may be made from time to time, with a view to building up a complete inventory of man-power available for war and essential civilian purposes. To consolidate records and to avoid duplication, the administrative responsibility for national registration has been transferred from the Department of National War Services to the Department of Labour.

Under the program now adopted, the mobilization of industrial man-power will, in the main, be effected through the agency of the Employment Service of Canada. The armed forces will continue to recruit men for the active army, the navy and the air force by the present voluntary methods. The calling up of men for compulsory military training and service will continue to be the responsibility of the Department of National War Services.

Compulsion is now being applied in aspects of the mobilization of man-power, other than military service within Canada, to which it has been applied since October, 1940. It is recognized that no hard and fast compulsory regulations can be made which may not work injustices in individual cases. As a consequence, considerable discretion has been vested in the national war services boards to decide appeals from the compulsory or restrictive regulations of the government, and from the orders of the director of national selective service and the national selective service officers.

The right of appeal will be enjoyed, not only by employers, employees, farmers, farm labourers and others directly affected, but also by interested government departments. The duty of hearing civilian appeals will add greatly to the work of the national war services boards, now mainly concerned with the appeals of men called up for military service. In order to cope with the increased duties which will fall upon the boards, it may become necessary to increase their number and in some cases to divide their territorial jurisdictions.

Aspects of National Selective Service

The war-time mobilization of man-power has three important aspects:

1. Estimating the number of men and women required for the different kinds of war service;

2. Increasing the total man-power resources available for war purposes. In other words, making available for some part in the war effort the largest possible number of men and women.

3. Directing the available men and women into the most useful form of war service.

All of these tasks have to be carried on at one and the same time, and, in part at least, through the same channels.

The whole program is interrelated and interdependent. I shall now give a brief outline of each of the measures, indicating, as far as possible, how each relates to and affects the other.

Estimating Man-Power Requirements

Estimating the number of men and women needed in the war effort, and the most effective distribution of the total among the armed services, war industry and essential civilian pursuits, is a difficult task. A constantly changing war necessitates constant changes in military and production plans. These changes, in turn, involve continuous revision of the estimates of man-power requirements, and the proposed allocation of man-power reserves. To this end, the director of national selective service has been given authority to obtain information from government departments, and empowered to secure from employers, by compulsion if necessary, full information, regarding prospective labour requirements, existing labour forces, wage scales and working conditions.

Making Men and Women Available for War Service

In the early months of the war, there were large reserves of available man-power for war service because of the unemployment and under-employment of many thousands of Canadians. If we except women who, for domestic or social reasons, have not desired or sought employment, we are now well past the stage where there is any considerable reserve of employable unemployed persons. Women, therefore, constitute the most important available reserve of man-power. It is, however, not so much by bringing women directly into the armed forces, though that is being done, that the total man-power available for war service can actually be increased; rather is this end accomplished by the substitution of women for men in essential civilian tasks, and in war industry.

Additional man-power is becoming potentially available for war service as an indirect result of the curtailment of civilian production. To the achievement of a maximum effort, it is vital that man-power thus released be shifted as speedily and efficiently as possible into some form of war service. The process of shifting man-power from civilian occupations into war service has, of course, gone on steadily since the outbreak of war. It has now been given more definite governmental direction and is being accelerated.

For more than a year, the Department of Labour, in cooperation with the provinces and industry, has been increasing the man-power available through training men and women for employment in war industries. During the past year, more than 60,000 trainees received instruction in about one hundred technical schools. Industries cooperating with the Department of Labour, and often on their own initiative, trained at least an equal number. Through the Department of Labour services, and directly in industry, greater provision is now being made for training and retraining men for essential war production; for diluting present working forces by employment of men of lesser skill for simpler operations; and for the constant up-grading, as a result of training and experience, of existing working forces.

The program of increasing war-time man-power reserves has a threefold objective:

First, to increase the total male labour force available for war production.

Second, to make possible the replacement of able-bodied men of military age with older men, or men less fit physically for arduous tasks.

Third, to increase war-time man-power reserves by bringing women into industry. This is the most important single feature of the program.

The first two objectives are being accelerated by governmental and industrial assistance. The assistance is similar in character, although on a smaller scale, to that being afforded for recruiting female labour.

The series of measures being undertaken to bring women into industries include:

1. Recruiting campaigns, planned and publicized to attract women into the needed work;

2. The provision of appropriate and adequate facilities for interviewing women applicants and for giving them advice and direction;

3. The establishment of competent job information and placement services, specializing in female labour;

4. Advances, where necessary, to meet transportation costs in getting women workers to places where work is available;

5. The provision of hostels or other satisfactory housing arrangements;

6. The provision of nurseries and other means of caring for children;

7. The provision, where needed, of medical and recreational facilities;

8. The provision in industry, as well as under direct governmental auspices, of training programs, specifically designed for women;

9. Pressure upon employers who may be reluctant to engage female labour;

10. Changes in civil service and institutional restrictions on the employment of female, and, particularly, married female labour.

Some of these measures have already been applied over a considerable period of time. From now on, they will be more extensively applied.

Making Supervisors Available to War Industries

An important phase of the man-power problem has to do with providing in war industries the necessary supervisory personnel. It has been found that, as war industries continue to expand, it is increasingly difficult to secure sufficient supervisors, personnel managers, and foremen, to direct the enlarged work forces. Many plants producing urgently needed war materials are now operating day and night, seven days in the week. Others that might be operating on the same basis are hampered by lack of supervisors.

A recent statement by Mr. Bevin on the importance of personnel factors in war production in Great Britain is equally applicable to Canada. It reads:

> In the layout of our war effort, sufficient attention was not paid to the personnel problem. . . . The longer the war goes on, the more necessary it becomes to pay greater regard to this personnel side of industry. The absence of a proper understanding of the problem has been one of our greatest handicaps in this great struggle. . . . Hence my additional plea for the personnel manager, who should be specially trained to have an equal position in industry with other members of the executive. Indeed, I am sure—and I would emphasize this—that our post-war position will be materially helped, and the future prospects of British industry enhanced, by a full appreciation of this important fact.

To assist our Canadian employers to meet their personnel problem, provision has been made by the government for training in personnel management. The universities have agreed to cooperate. Experienced personnel men will serve as instructors and sponsors. Trainees will be given practical instruction in the classroom, and on the job.

If the experience of this undertaking warrants, these facilities will be extended to foremen and other supervisors. It is hoped by this means greatly to reduce an important area of difficulty in war production. Moreover, better personnel policies and practice should minimize friction between management and men, improve morale, and thereby increase output.

Re-Conditioning the Physically Unfit

The government is also undertaking an extended program of reconditioning men to fit them physically for military service.

It is and has been standard practice for the army to accept men for service who require only dental treatment, provision of glasses, or nutritional improvement. After enlistment or enrolment, treatment is provided for these men as a matter of routine.

There are, however, men volunteering for the active army, or called up for training and service, who at present have to be rejected because of some condition other than those just mentioned, and which, though not a serious disability, is important enough to require more than routine treatment.

It has been decided that when disabilities of this class are mendable within a comparatively short time, free remedial treatment will be provided to restore the standard of physical fitness of these men. Such a policy is in the interests of the armed services and also of benefit to the health of the nation as a whole.

Free treatment will be available to those who volunteer and undertake in writing to enlist as soon as they are physically eligible, provided they are certified by a competent board to be cases in which the disability can be removed or mended by treatment so as to make them physically fit for enlistment within a specified reasonable period.

Free treatment will also be available to those who are called up for compulsory training and service provided it is similarly certified, as in the case of volunteers, that the disability is such that it can be removed or mended within a specified reasonable period. When the treatment is successfully completed, these men will be available for military training and service.

In giving treatment, the Departments of National Defence, Pensions and National Health, and National War Services, will cooperate.

The treatment, both for volunteers and for men called up for training and service, will be provided or arranged for by the Department of Pensions and National Health. In neither case will men undergoing treatment be accepted into the army unless, and until, the treatment has been successfully completed. In both cases, in addition to free treatment and, if necessary, hospitalization, men undergoing treatment will be paid an allowance for time actually and necessarily lost during the remedial period.

It should be added that free treatment on precisely the same terms as in the case of volunteers for the active army, will be provided for men who volunteer for the air force, and would now be rejected for physical unfitness.

Compulsory Military Service

Until recently, the most important form of direct compulsion in mobilizing men has been the compulsory military training and service of unmarried men and of widowers without children. This, of course, is being continued, although with certain changes in the selective procedure.

A proclamation is being issued making liable to call for military training and service all men born in the years from 1912 to 1921, who on July 15, 1940, were unmarried or widowers without children. In other words, the age limit for compulsory service has been raised from 24 to 30. It has also been decided to select the men to be called up for service by drawing lots over the whole field of those who are subject to the proclamation. As soon as the necessary administrative arrangements have been worked out for this plan of selection by lot, a detailed announcement will be made by the Minister of National War Services.

Liability for compulsory military service is, at present, confined to citizens of Canada. It has been decided to extend this liability to all residents of Canada, whether citizens or not, as far as may be expedient in the light of all the circumstances. As reciprocal arrangements and other international considerations are involved in the proposal. its details cannot be announced immediately.

The liability to compulsory military service will continue to be general for the age categories affected. The burden of demonstrating the case for postponements is unchanged, except in the case of persons wholly or mainly employed in agriculture on March 23, 1942, as defined in the amended national war services regulations.

Stabilization of Employment in Agriculture

One of the man-power problems with which the country is faced is the growing shortage of agricultural labour. Means, accordingly, have had to be devised to ensure that the supply of farm labour is not depleted. To that end, regulations have been enacted to stabilize employment in agriculture.

With three exceptions, the regulations provide that no male person wholly or mainly employed in agriculture on March 23, 1942, as defined by the regulations shall enter into any employment outside agriculture unless he has obtained written permission from the national selective service officer to enter such employment. They also provide that no person shall take into employment outside agriculture, any male person wholly or mainly employed in agriculture unless such male person has obtained such permission.

The three exceptions provided for are active service in the armed forces by voluntary enlistment, seasonal employment in a primary industry, and compulsory military training if it is established that the person concerned is not an essential worker in agriculture.

The exception of seasonal employment in other primary industries, which include lumbering, logging, forestry, fishing and trapping is, in reality, not an exception. In many parts of the country, agriculture and the the primary pursuits specified are complementary aspects of what is, in effect, a single occupation.

The other specific exceptions both relate to service in the armed forces. Voluntary enlistment of farmers and agricultural workers in the active army, the navy and the air forces will continue to be encouraged. It is felt that the privilege of serving voluntarily in the armed forces should not be completely denied to a whole class of the community, however important may be the service its members are at present performing.

On the other hand, the growing scarcity of labour on the farms and the increasing importance of maintaining, and, indeed, of increasing food production, has been recognized. This has been accomplished by a fundamental alteration of the policy regarding compulsory military training and service where such service touches persons wholly or mainly employed in agriculture. Up to the present there has been a general obligation to serve, and the responsibility for proving a case for postponement of service has rested with the individual. Under the new regulations, farmers, farmers' sons and agricultural labourers will normally not be obliged to undertake compulsory military training and service. It is realized, however, that in a limited number of cases, men on the farms are not, in fact, essential agricultural workers. If it is established to the satisfaction of the national war services boards concerned that such persons are not essential workers in agriculture, they will continue to be called for service in the appropriate age groups.

This change of policy regarding compulsory military service applies only to those who were wholly or mainly employed in agriculture, on March 23, 1942, in accordance with

the terms of the regulations. Persons who subsequent to that date may return to employment in agriculture, except from normal seasonal occupations, will continue to be liable for military service. In such cases, the earlier regulations regarding postponement will continue to apply.

Apart from the three specified exceptions to the rule that persons engaged in agriculture shall not enter into other employments, the regulations also empower the national selective service officer, having jurisdiction in the district in which a person resides, to give permission to farmers and agricultural workers to enter other employment. This provision has been included in the regulations so as to maintain a reasonable degree of flexibility in policy. It is recognized that there may be those engaged in agricultural pursuits, who, because of the limited character of their production or on other grounds, are not performing an essential war service. At the same time, such persons, because of age or physical condition, or for other reasons, may not be suitable for military service. Unless the way were left open for such persons to move into other fields of activity, great individual hardships might result, and valuable service in other fields be lost to the country.

It will, therefore, be open to farmers and others engaged in agricultural work, who desire to enter some other field of employment, to apply to the national selective service officer, having jurisdiction in the district in which they reside, for permission to change their employment. Detailed regulations to guide national selective service officers in determining whether such permission shall be granted or refused will be made and revised from time to time in the light of experience. Two governing factors will be taken into account in determining these regulations, namely, the maintenance of the necessary agricultural production in Canada, and the extent to which the applicant is essential to the maintenance of such production.

The policy of stabilizing employment in agriculture represents what, in effect, is a block allocation to agriculture of the persons best fitted for food production. It constitutes a form of large scale selection for national service which should go far to ensure the supply of man-power essential to the food production aspect of the national war effort.

Diversion of Technicians to War Services

Another step in the allocation of man-power recently taken, relates to the diversion of technicians to war service. It concerns persons normally engaged in the engineering profession as civil, mechanical, electrical, chemical, metallurgical or mining engineers; also production and industrial engineers, college teachers of engineering science, persons trained in any branch of the science of chemistry, research scientists and persons other than teachers holding university degrees in engineering, chemistry, physics, geology, mathematics, architecture, or in any natural science; also all technically qualified members of the Engineering Institute of Canada, the Canadian Institute of Chemistry, the Canadian Institute of Mining and Metallurgy, the Royal Architectural Institute of Canada and of any provincial association of professional engineers, chemists or architects.

About a year ago, with the aid of the professional engineering societies, there was established in the Department of Labour a war-time bureau of technical personnel. The bureau has accumulated information on most of the professional engineers of the country. It has sought to make engineers available as needed in the armed services and in war industry. The time has come, when in the opinion of the government, all technical men should be shifted from non-essential activities to war or other essential services.

Under regulations at present in force, if, at the request of the Minister of Labour an engineer is willing to transfer to more essential work, his present employer is obliged to release him and to reinstate him when his undertaking on essential work is completed. Employers who hire or release technical employees are required to notify the bureau so that technical men as needed in the war effort may be quickly located. Contracts of employment for the services of technicians require the approval of the Minister of Labour.

This measure is restricted for the present to professional technicians. It may, however, become necessary as an essential war service, also to require skilled workmen in certain categories, to remain in their existing occupations in war industries, or to move from one war industry to another, or to remain in certain essential civilian occupations. Should such widespread control become necessary, every effort will be made to reduce its arbitrary aspects to a minimum, and to secure, from workmen and employers alike, the largest measure of voluntary cooperation.

Restriction of Entry into Certain Occupations

In order to increase the numbers of men available for service in the armed forces, in war industry, or in other essential occupations, regulations have been made which prohibit the entry into employment in a wide variety of occupations, of men who are of military age and physically fit. These occupations will be known

in future as restricted occupations. The regulations include a schedule of the restricted occupations. The schedule comprises:

Bookkeepers, cashiers, stenographers, typists, clerks, office appliance operators, messengers, salesmen and sales clerks, taxicab drivers.

Any occupation in wholesale or retail trade, advertising, and real estate.

Any occupation in, or directly associated with, entertainment, recreational or personal service, including but not restricted to theatres; film agencies; motion picture companies; clubs; bowling alleys; pool rooms; sports; barbering and hairdressing; domestic service; dyeing; cleaning and pressing; laundering; hotels and lodging houses; baths; restaurants; cafes and taverns; shoe shining, guide service, and funeral service.

Any occupation in the manufacture or production of

1. Biscuits, confectionery, cocoa.
2. Bread and bakery products.
3. Aerated and mineral waters and other beverages.
4. Liquors, wines, beer.
5. Rubber products.
6. Tobacco, cigars, cigarettes.
7. Leather and fur products.
8. Textile products.
9. Furniture and upholstering.
10. Photography.
11. Printing, publishing and engraving.
12. Radios, refrigerators, washing machines, and vacuum cleaners.
13. Jewellery and watchmaking.
14. Pottery and china.
15. Soaps, and toilet preparations and articles.
16. Mattresses.
17. Musical instruments.
18. Barber and beauty shop equipment.
19. Cameras and films.
20. Sporting goods.
21. Games, toys and novelties.

Any occupation in the repair of clothing, boots and shoes, furniture and household equipment, jewellery or watches, musical instruments.

It is provided that, on and after March 23, 1942, no male person shall accept employment, and no employer shall engage any male person in any of these restricted occupations, unless such person presents to the prospective employer a birth certificate or other incontrovertible evidence that his age is less than seventeen or more than forty-five years; or a certificate of honourable discharge from the armed forces; or evidence of rejection on grounds of physical unfitness for active service in the armed forces during the present war; or a permit from a national selective service officer authorizing him to accept such employment.

The conditions which govern the granting or refusing of permission by national selective service officers are to be made, and may be revised from time to time, by the Minister of Labour. Permits are necessarily subject to cancellation at any time.

The Minister of Labour is authorized to require employers to furnish reports about all persons engaged for or released from restricted occupations. The governor in council is empowered to amend the schedule of restricted occupations, by the deletion or addition of any occupation.

By applying the negative compulsion of restriction, where possible, in preference to the positive compulsion of allocation, the waste of man-power in unessential activities is prevented. At the same time, men and women are maintained in or directed into the form of service they prefer. It is obvious that the greater the measure of willingness that can be preserved, the more effective the service will be.

Scope of Selective Service

May I say, in conclusion, while the government has not hesitated and will not hesitate to apply compulsion where compulsion will serve to increase the total war effort, the government has no desire to add unduly —which means wastefully—to governmental machinery. It is essential that at a time of war, the services of men and women should not be consumed in unnecessary tasks. It is imperative that the services of all should be directed into war-time tasks. In those aspects of our war effort in which voluntary methods are working satisfactorily, voluntary selection, including a measure of choice by the individual of the appropriate field of service, has been and will be continued. The more expensive and complicated methods of compulsion have been employed only where it is felt that compulsory selection is necessary in order to increase efficiency in the prosecution of the war. Compulsion, however, will be applied without fear or favour wherever in the opinion of the government its use will aid in the achievement of a maximum war effort.

Clarification of Man-power Mobilization by Director of National Selective Service

The new program—which, together with price and wage control, is weaving a new pattern in Canada's war-time design for living—was clarified by press conferences held by both the Minister of Labour, Hon. Humphrey Mitchell, and the Director of National Selective Service, Mr. Elliott M. Little. In addition, the new policy was further explained in national radio broadcasts by Mr. Little and by Mr. Paul Goulet, the Associate Director, and by Mr. G.

H. Lash, Director of Public Information. Mr. Little also spoke at the convention of the Canadian Daily Newspaper Association. Since Mr. Little's broadcast over a national network outlined the operation of the plan it is given herewith in its entirety:

Many of you are wondering what national selective service is, how the plan will be put into operation, and, most important of all, how it will affect you. I will try to answer some of these questions.

In the first place it should be understood that the whole purpose of selective service is to give each Canadian the job he or she can do best in this war.

This is total war. In total war, every citizen must subordinate every other interest to the essential job of beating the enemy. We should realize in Canada, as much as the people in Britain and Australia do, that this is a life and death struggle. It's a struggle which we must fight in the factories, producing weapons. We must fight it in the fields, growing food. We must fight it on the battlefield, wherever our armed forces can meet the enemy.

We must do better than we have done yet. We have done much. We must do more. We've got to perform miracles!

It has been estimated that about 40 per cent of our national energy is going into the prosecution of the war on the production front. This is a lot when you consider that at no time in the last war did production take more than 10 per cent of our energy. But it is not a lot when you remember that Germany is putting 70 per cent of her energy into the war. You cannot fight a 70 per cent effort with a 40 per cent effort. We have been too willing to accept the fallacy that one Canadian is as good as five Germans or ten Japs. That's suicidal thinking.

Don't let us become self-satisfied because our war production has increased by leaps and bounds. Don't let us overlook the fact that Germany too is increasing production. The British Ministry of Economic Warfare tells us that German production has now reached the highest point in its history.

Necessity for Measure

As a free people, we don't like the idea of regimentation, but we are beginning to wake up to the fact that we must accept a measure of regimentation in Canada temporarily, if we are not to have slavery forced upon us permanently.

There is no need or desire to gloss over facts or kid the people of Canada. National Selective Service may have phases which will hurt as time goes on. But I would point out that these regulations are no more drastic than such economic regulations as the price ceiling and wage control, which had no precedents in any democracy. The wage and price regulations were accepted because Canadians knew we had to have them if we were going to win. Selective Service springs from the same necessity.

When announcing Selective Service, the Prime Minister made it plain that this manpower problem means much more than getting men into uniform. It involves seeing that essential civilian services are maintained, that sufficient food is produced, that munitions are turned out in an ever-increasing volume.

He gave us some figures, too. Munitions production will require another 100,000 workers in the next year, which will bring the total in war industry to 700,000. In the same period the army, navy and air force will require 200,000 more men.

That makes a total of 300,000 additional people needed in the next 12 months. Where are we going to get them? Broadly speaking we are going to encourage workers to transfer from non-essential jobs to war industry and the fighting forces. At the same time we will bring more women into industry. There will also be boys and girls coming of age by the thousands.

All will be affected by this program in time. As I said, this means a certain measure of regimentation, but I assure you this adjustment will be brought about with the least possible compulsion. That is the democratic way, and your government is depending on your co-operation rather than on the force of law. The law will, of course, have teeth for the few who have to be persuaded.

Right here, I want to emphasize that this whole Selective Service program is your program. As it develops, it will provide the answer to the question you have been asking: "What can I do to help?"

It will get into stride with all the speed we can put behind it—but speed—we hope—without confusion. We aim to avoid confusion by careful planning. This planning has already started.

Inventory of Man-power

The first thing is to obtain adequate information on the available man-power of Canada and keep it up-to-date. The national registration of June, 1940, gave some basic information on the numbers, sex and age groups of our people, and it served a useful purpose at the time. However, it falls short of giving all the information necessary to-day. We need a continuing inventory of our manpower. We must know quickly of the improvement in the skills of our people. We must know where they are to-day and what they are capable of doing to-day, and if three

months or one year from now conditions require new information, we must have the machinery to get it and get it quickly. We cannot plan an all out war effort without such a running inventory.

It is not only essential to have this information for our war planning, but it will be equally desirable for our post-war planning.

In my opinion, the one fundamental and all-important problem of the immediate post-war period will be the finding of useful employment for the men and women of working age in Canada—useful employment for men and women who, by the end of the war, will be in the active forces or in some war industry. In setting up an organization to meet war needs, we will keep in mind the need for machinery to deal with post-war problems.

Now I want to outline the selective service program in some detail.

As man-power becomes scarcer, the government is setting up priority ratings, just as it has already done on materials. It is necessary to secure and co-ordinate information on our man-power requirements and plan for the orderly procurement of man-power for these requirements.

Restricted Industries and Jobs

As a basic part of its program the government has named certain entire industries as restricted. That is, men between the ages of 17 and 45 who are physically fit, cannot enter these industries except by special permit. The government has also named certain jobs as restricted, regardless of what industry they are in, since it considers that these can be performed by women and older men. Bookkeeping is such a job, regardless of whether it is in a munitions plant or a confectionary shop.

This does not mean that if you are a male bookkeeper between 17 and 45 and physically fit, you must quit your work. It means if you are between 17 and 45 and physically fit you can't take such a job if one is open, unless you have a permit.

The detailed administration of the plan—and that includes considering applications for these permits—will be handled by selective service officers in each locality.

Temporarily, local managers of the Unemployment Insurance Commission are acting as selective service officers. They will apply the regulations in each locality, with discretion, so as not to work unnecessary hardship.

Permit Procedure

I would like to emphasize here that the regulations don't tell people where to work. They simply tell the able-bodied man of military age where he cannot work—unless he has obtained a permit.

If you are between 17 and 45, and physically fit, and want to enter a restricted occupation or industry, you must present your application for a permit in writing to one of the selective service officers. In such cases and as a general rule, you will not be given a permit unless you can show you are unable to obtain employment in an occupation not on the restricted list.

Great care will be taken in granting permits to single men in the age-groups subject to draft call—that is, from 21 to 30. More leniency will be shown married men with dependents.

It should also be understood that permits to work in restricted occupations are granted only on a temporary basis and can be revoked at any time.

The plan visualizes that many peace-time concerns may eventually be wholly or partially closed through shortages of materials. If and when this happens, employees of such concerns will be available for essential work. It is hoped our planning will anticipate such adjustments so that transfers can be made in an orderly way.

All these regulations I have been describing apply only to male persons. None of them apply to women. That should be clearly understood. However, we anticipate that as more workers are needed, women will be eager to respond to the call. Meanwhile, it would be helpful if women who are willing to work would so notify the employment offices in their own districts. In doing so they should let the officers know what type of work they believe they are suited for, because as need arises, employers will be anxious to have their help.

Position of Farm Labour

A vital part of this man-power program is the maintenance of an adequate supply of farm labour. It's just as necessary to continue food production for ourselves at home and for troops and allies overseas as it is to make tanks and guns.

As the Prime Minister told you, there is a growing shortage of farm labour. To meet this situation the government has ruled that no man who is chiefly engaged in agriculture can take any other job without written permission from a selective service officer.

When I say he can take no other job, I should qualify that. There are throughout the country many men who spend most of their time on the farm but still spend a part of the year in such seasonal occupations as logging, fishing, forestry and trapping. The regulations do not prevent these farmers carrying on this extra work.

As a further guarantee of continued food supply, the regulations provide that a man whose main occupation on the 23rd of March

last was farming, may be granted indefinite postponement of compulsory military service.

He must, however, be able to establish that on March 23 his chief occupation was farming, even though on that date he may have been temporarily engaged in logging, fishing, forestry and trapping.

I cannot stress this too much, because there have been many inquiries about it. Some men who were working in mines and war plants left their employment after March 23, apparently with the mistaken idea that they would be exempt from military service if they hurried back to the farm.

Calls for military service which go out to all young men of 21 to 30 will still go out to farmers, and must be answered; but a young farmer may write the district registrar who sent him the call and apply for an indefinite postponement of his military service, on the grounds that he is an essential farm worker and that farming was his chief occupation on March 23. Unless his claim is challenged, his application will be granted.

Of course, there is nothing to prevent a farmer volunteering for the armed forces any time he is so inclined.

Labour Not Frozen

Now I want to turn to another point. There seems to be an impression in some quarters that certain classes of labour are "frozen"—that is, that they may not leave their present jobs. This is not so.

Workers are free to move about from one essential occupation to another.

Farmers, as I have mentioned, are free to engage during the off seasons in the primary industries, without losing their right to special treatment from the draft authorities. It is important that people get this straight.

We had a situation in one section where a group of farmers refused to leave their farms to cut pulpwood because they feared they would lose the right of having their military service deferred. To these farmers I say this fear is without foundation. Pulpwood cutting is seasonal work and is regarded as part of a farmer's normal occupation. Both pulpwood and timber are essential to our war effort.

Another frequent inquiry is whether students will be allowed to work in non-essential occupations during the summer. Where youths of 17 to 21 are continuing their schooling, the answer generally will be yes, except in sections where they are needed in war industry. They must of course have permits to enter non-essential occupations.

Young men attending the universities and technical schools, who possess special training and skill, needed in war industries, will be expected to devote themselves to that type of work.

One trouble we anticipate in giving effect to our program is that people are likely to let themselves be alarmed by false rumors or misinterpretations. There is no reason for any one to get hysterical. This is Canada—not Germany.

We are mobilizing our man-power and our woman-power, but we are doing it in the Canadian way. The government will protect the rights of the individual as much as possible.

Now that we have selective service, people are asking what they should do. While we are putting this program on its feet they should stick at their present work. A tremendous amount of time and energy is lost by people hopping from one job to another, all too often just for the sake of a change.

The shift-over to complete war production can only be made gradually. As additional workers are needed in war plants, we'll let you know.

Training for Skilled Work

Among other things, the selective service plan will involve the training of thousands of people for skilled and semi-skilled jobs. This will be done partly in the plants and partly in technical classes sponsored by the Dominion-provincial training program. These classes will be expanded as we determine the future needs of each industry and various branches of the armed forces. In addition, our universities must be organized and aided as training centres for technical personnel.

As far as possible, we proposed to take the work to the people, rather than to take the people to the work. You cannot transfer any large number of workers from one place to another without creating secondary problems of housing, transportation and so forth. These secondary problems in turn mean that materials and man-power must be diverted to meet them, defeating the purpose of the program.

The rehabilitation phase of the man-power program should also be noted. This provides for the medical treatment of men who have been rejected by the armed forces because of minor disabilities. Where these disabilities can be remedied, the men will receive free treatment so they may qualify for active service when cured.

Employment Procedure

May I now give a word of direction. The regulations our government has laid down for national selective service should be observed not only in the letter but in the spirit. In its present stage the program is made up of a number of steps which may lead to rationing of labour if man-power, especially in certain skilled trades, becomes scarcer. If employers conform to the spirit of the regulations now, headaches and troubles will be avoided later.

Obviously employers should hire women and older men to minimize disruption in their organizations as younger men are withdrawn for the armed forces and essential industries.

Regulations covering engineers and technicians now require an employer to release such experts if they are needed in a war industry, and to take them back when their war job is over. These regulations also indicate future policy for other occupations.

We would urge both employers and workers to use the public employment offices from now on. These are the employment and claims offices of the Unemployment Insurance Commission. It is important that employers keep these offices informed of their man-power needs, so that available workers can be placed where they are required most. The public employment offices will become increasingly important as this program develops. Although there are almost 100 now, it looks as if more offices will have to be opened and the staff in existing offices probably increased.

Not long ago Australia's great leader, Prime Minister Curtin, made a speech. He said, and I quote—

"It is now work or fight for everyone in Australia. I say to you, as a comfort to our friends and a stiff warning to our enemies, that only the infirm remain outside the compass of our war plans."

Those were Prime Minister Curtin's words, and he meant business. So must we.

Address to Editors on Man-power Problem

Subsequently, the Director addressed the convention of the Canadian Daily Newspaper Association at Toronto on April 15. In another informative and pungent speech the Director, after first telling the editors of the invaluable service they could render in maintaining an informed public opinion, again outlined the purpose and scope of national man-power mobilization. He warned that:

"Many peace-time industries may feel the pinch—not only as to the materials they use, but their workers will have to be diverted into essential tasks. It is because of the urgency for this diversion that the government has restricted employment in certain industries. This restriction consists of telling physically fit men of military age, that is, from 17 to 45, *not* where they *must* work but where they may *not* take work without a permit from National Selective Service officers.

"I would emphasize that there are *restricted industries* in which no jobs may be taken by a physically fit man of military age without a permit, and there are restricted *jobs* which may not be taken by a physically fit man of military age regardless of what industry the job is in.

"The reason for this is obvious. The government considers that these jobs and/or industries may be adequately carried on by women and older men. This releases the younger men for the armed forces and heavier work in war industry.

"I should like to point out that restricted occupations and enterprises are *not* necessarily non-essential. The bakery business, for example, is rather essential; but you will find it on the list because women and older men can operate it. . . . .

"As time goes on all occupations must be governed by the acuteness of the man-power shortage. Our war effort will result in a general tightness in labour supply. Only when we have a real and general tightness will we have concrete evidence before us that every man and woman is doing his or her part.

"If that objective is desirable, and I am sure we agree that it is, we may have to have labour rationing. We may have to allot each employer only such men as can be spared to meet his essential needs."

Ascertaining Man-power Requirements

Dealing with the urgent factor of ascertaining immediate requirements, the Director stated:

"We are assembling the presently indicated man-power requirements of the army, navy and air force for the next year. The Department of Munitions and Supply is, at this moment, securing further information as to the man-power needs of war industries. As soon as this information is assembled, steps shall be taken to see that the needs are filled.

"We will then be in a position to devise a practical plan of mobilization To do that we will need the co-operation of everyone. We must be advised in sufficient time of future man-power requirements. We must also be advised of the expected future supply of man-power which will become available as non-essential production falls off. In other words, there must be some central clearing medium for all such information and its use. Our office is that medium.

"While we talk of drawing up a plan, we must all appreciate that with the changing fortunes of war, changes will be necessary in any plan we devise; but it is obviously better to have a plan which may have to be changed, than to have no plan at all.

"The Prime Minister said in his address, when enunciating the government policy, that

a total of approximately 300,000 were needed in the armed forces and war industries during the next 12 months.

"Where do we get these 300,000 people? As some industries close down because of lack of material or because they are not required, their workers will be transferred in as orderly a manner as we can, to war jobs. We will avail ourselves of the thousands of boys and girls coming of age each year. Women also will be called upon to take a larger part in industry as the demand for labour grows."

Women in Industry

On the question of women in industry, the Director emphasized that no compulsion is planned, and added:

"Selective service regulations are confined to men; none of the regulations apply to women. However, when women are needed, I am sure they will be anxious to help. The desire of our women to serve and sacrifice is at least equal to that of our men.

"Now, when I speak of putting women into industry, it might be a good time to explain that we don't intend to bring women in one door and have skilled men forced out the other door. There is still unemployment in some sections of Canada. We might as well recognize the fact. There are still workers of some skill walking the streets. Certainly, it would be folly to recruit women in these places, until the men have been absorbed. It is entirely contrary to the principles of the selective service regulations—that an employer utilize those regulations to replace men with women merely for the sake of having the same work done at lower cost.

"The important thing is to get the breadwinners working first; then the women who can work full time; then, when it becomes necessary, the women who will work part time."

The Farmer and Selective Service

Again the Director took occasion to clarify any confusion on the relation of man-power to agriculture, and observed:

"Since the war started, many thousands of men have left the farms to enlist or go into industry. The result is that there is at present a serious shortage of farm labour.

"Accordingly, the government has ruled that no farm worker may enter any other employment, with the exception of seasonal work like logging, lumbering, forestry, fishing and trapping, unless he has a permit. He may of course, enlist in the armed forces if he wishes.

"In keeping with this regulation, young farmers of draft age (21 to 30), will be given preferential treatment by the draft boards. They will still be called up, and must answer, but they may answer merely in writing. If farming was their chief occupation on March 23 last, and they are essential to the farm, they will be granted an indefinite postponement of military service. Of course, if a man has six sons on a small farm, they will not necessarily all be regarded as essential to the farm.

"There have been some misinterpretations of the position of the farmer under these selective service regulations. Some men who were working in mines and in factories left their jobs, perhaps in the mistaken idea that by getting to a farm they could escape being called up. The records will show where these men were working on March 23. I reiterate only those farmers who were chiefly engaged in farming March 23, and are essential to the farm, can expect postponement of military service."

Necessity of Better Industrial Relations

The Director strongly urged the development of better industrial relations as of first importance in increasing industrial efficiency. In this respect, he declared:

"Our problem is not simply to man industry —industry must also be made more efficient; each minute of time, like each pound of material, must be made to produce the maximum.

"From my own experience, I know that men do better work if they feel that they are working with you and not merely working for you. I know too that if men are encouraged to take an active interest in the operation of their plant it is amazing what practical suggestions for improving operations and increasing production come from a long way down the line.

"May I speak bluntly on this question. Better employer-employee relations have got to be brought about. Better personnel relations mean better personal relations between employer and employee. It does not mean paternalism. The employee does not want nor ask for paternalism. He simply asks to be recognized as a responsible citizen.

"Considering the urgency, it is high time that we, as factory managers and employers, recognize this—and having recognized it, do something about it. Improved relations are not merely a question of bettering the plant atmosphere. They will pay dividends in tanks, guns and planes.

"Unfortunately, not all people in the ranks of management or in the ranks of labour appreciate the effect of some of their actions. Some employees have apparently run from

industry to the farm in the belief that they could establish immunity from military service, and, on the other hand, some employers regard the selective service regulations as an excuse for dumping their employee problems in Ottawa's lap. Plant efficiency cannot be regulated from Ottawa. An employer's relations with his employees should be of prime concern to himself, the employer.

"It should also be obvious to all that the best possible relations which can be achieved now between management and its employees can be the foundation of industrial and social security in the post-war world."

National Selective Service Orders in Council

Prior to his address on man-power mobilization, the Prime Minister tabled in the House of Commons copies of thirteen Orders in Council designed to implement the National Selective Service program. They were passed under the provisions of the War Measures Act, Chapter 206, R.S.C. 1927; The National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of Canada, 1940; The Public Service Re-arrangement and Transfer of Duties Act, Chapter 165, R.S.C. 1927, and The Unemployment Insurance Act, Chapter 44 of the Statutes of Canada, 1940.

These Orders provided for the administration of the program, the establishment of a man-power inventory, a program of physical re-conditioning of men and women rejected for medical reasons for service with the armed forces, a program of personnel management training, raising the age limit for compulsory military service to 30, a list of occupations restricted to men of military age, the stabilization of employment in agriculture, and the more effective utilization of scientific and technical personnel.

Since all of these Orders deal with a particular phase of the program, they are reproduced herewith in full, prefaced by a brief summary:

Administration

Order in Council P.C. 2254 (March 21), relates to the administration of the program. This Order provides for the appointment of a Director and an Associate Director of National Selective Service and for the establishment of a National Selective Service Advisory Board.

The Director and the Associate Director are responsible (*a*) for the co-ordination of the policies and activities of all governmental agencies concerned with the demand for and supply of labour, and (*b*) for the recommendation of policies necessary in connection with the National Selective Service Program.

The National Selective Service Advisory Board is formed by combining the National War Labour Board and the Interdepartmental Committee on Labour Co-ordination. The Director must advise with and be advised by this Board on major matters of policy affecting employers and employees.

The Director must also advise with and be advised by the Interdepartmental Committee on Labour Co-ordination on matters connected with "the development and administration of the program." The following is the text of the Order:

P.C. 2254

Whereas the Minister of National War Services and the Acting Minister of Labour report that it is essential for the development and administration of a program of National Selective Service to appoint a Director of National Selective Service and to establish machinery for co-ordination between the departments of government concerned and consultation with representatives of employers and employees;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National War Services and the Acting Minister of Labour, and under the authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of Canada, 1940, is pleased to make, and doth hereby make the following Order:—

Order

1. There shall be an officer who shall be called the Director of National Selective Service and an officer who shall be called the Associate Director of National Selective Service, to be appointed by the Governor General in Council, and who shall hold office during pleasure.

2. It shall be the duty of the Director of National Selective Service, with the assistance of the Associate Director of National Selective Service, to co-ordinate the policies and activities of the departments and agencies of the Government of Canada which affect or relate to the demand for and the supply of labour requisite to the prosecution of the war in all its phases, to make such recommendations as he deems necessary in connection therewith, and generally to perform such other duties as the Governor in Council may direct.

3. The representatives of employers and employees on the Executive Committee of the National War Labour Board are hereby appointed as members of the Interdepartmental Committee on Labour Co-ordination and the said Committee shall of its own initiative or on request of the Director of National Selective Service, advise him about any matter relating to the development and administration of the program of National Selective Service.

4. (1) There is hereby established a National Selective Service Advisory Board which

shall consist of the members of the Interdepartmental Committee on Labour Co-ordination and the members of the National War Labour Board and such other members as the Minister of Labour may designate, and of which the Minister of Labour shall be chairman.

(2) It shall be the duty of the Director of National Selective Service to consult the National Selective Service Advisory Board, and of the said Board to advise the Director, on any matter of major policy affecting employers and employees before any recommendation in connection therewith is made.

5. (1) The Director of National Selective Service shall appoint or designate an officer, to be known as the National Selective Service Officer, for each area assigned by the Unemployment Insurance Commission to a local employment and claims office, who shall act as the representative of the Director in such area.

(2) The Governor in Council may appoint such other officers, clerks and other employees as may be necessary to carry out the duties assigned to the Director of National Selective Service.

6. The Director of National Selective Service, the Associate Director of National Selective Service, and such other officers, clerks and other employees as may be appointed hereunder shall receive such remuneration as the Governor in Council may fix.

Appointment of Director and Associate Director

Order in Council P.C. 2301 (March 23), appoints E. M. Little, Esq., as Director of National Selective Service and Paul Goulet, Esq., as Associate Director of National Selective Service. The following is the text of the Order:

P.C. 2301

Whereas by Order in Council P.C. 2254, of March 24, 1942, provision is made for the appointment of a Director of National Selective Service and an Associate Director of National Selective Service with the duties and powers, and for the purposes, set out in the said Order in Council;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to appoint and doth hereby appoint Elliott Menzies Little, Esquire, Director of National Selective Service and Paul Goulet, Esquire, Associate Director of National Selective Service.

Inventory of Employable Persons

Order in Council P.C. 1445 (March 2), authorizes the Minister of Labour, with the assistance of the Unemployment Insurance Commission and the Dominion Bureau of Statistics, to establish and maintain "an inventory of employable persons" in Canada. The following is the text of the Order:

P.C. 1445

Whereas the Minister of Labour reports that an essential prerequisite for the effective utilization of Canada's labour supply in the war effort, through improvement of industrial recruiting, training, transfer, and placements, is the establishment and maintenance of an inventory of employable persons; and,

That the Department of Labour, with the co-operation of the Unemployment Insurance Commission and the Dominion Bureau of Statistics, has experimented in establishing a partial inventory of over two million employees insured under the Unemployment Insurance Act, has classified them by location, occupation, employer, sex and age, and has determined that it is feasible to establish and maintain such an inventory on any necessary scale.

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under authority of the War Measures Act, Chapter 206 Revised Statutes of Canada 1927, and the National Resources Mobilization Act, Chapter 13 of the Statutes of Canada, 1940, is pleased to order and doth hereby order as follows,—

1. The Minister of Labour is hereby authorized and directed to establish and maintain an inventory of employable persons and for this purpose is hereby empowered:

(*a*) by public notice or otherwise to direct any person or class of persons to register in such manner and at such times and places as he may prescribe and to direct any employer or class of employers to maintain such records about their employees and to furnish such reports thereon as he may prescribe; and

(*b*) to direct the Unemployment Insurance Commission to obtain and furnish such information about employers subject to the Unemployment Insurance Act and such information about their employees, whether or not insurable, as he may prescribe.

2. Any person who refuses, fails or neglects to comply with any direction given by the Minister of Labour or his duly authorized representative pursuant to the provisions of this order shall be guilty of an offence and liable on summary conviction to a fine not exceeding two hundred dollars or to imprisonment for a term not exceeding three months or to both such fine and such imprisonment.

3. The Dominion Bureau of Statistics and all other departments and agencies of the Government of Canada are hereby authorized and directed to furnish such assistance to the Minister of Labour in the establishment and maintenance of the aforesaid inventory of employable persons and in estimating and forecasting the labour requirements of the armed services and industry, as he may require.

Registration of All Employees

Order in Council P.C. 1955 (March 13), implements Order in Council P.C. 1445 by requiring all employers in insurable employment to register through the Unemployment Insurance Commission all employees whether or not such employees are engaged in insurable employment. The following is the text of the Order:

P.C. 1955

Whereas the Minister of Labour reports that he has been advised by the Unemployment Insurance Commission—

That in order to carry out effectively the provisions of The Unemployment Insurance Act, 1940, and in order to provide the informa-

tion which may be required by the Minister of Labour in the establishment of an inventory of employable persons pursuant to the provisions of the Order in Council P.C. 1445 of 2nd March, 1942, it will be necessary to require all employers to register their employees as directed by the said Commission.

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour and under the authority of The Unemployment Insurance Act, Chapter 44 of the Statutes of Canada, 1940, the War Measures Act, Chapter 206, Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, Chapter 13 of the Statutes of Canada, 1940, is pleased to order and doth hereby order as follows:—

1. Every employer who employs one or more persons in insurable employment shall register all of his employees whether they are engaged in insurable employment or not, on forms provided by the Unemployment Insurance Commission at the times herein specified.
2. The forms provided shall be completed and returned to the Local Employment and Claims Office of the Unemployment Insurance Commission as soon as possible after March 15, 1942, and not later than April 1st, 1942, in respect of all employees whom the employer believes will be in his employment on April 1st, 1942, and in respect of employees engaged on or after April 1st, 1942, unless they are already registered, the forms shall be completed at the time of engagement and returned to the Local Employment and Claims Office forthwith.
3. Any person who refuses, fails or neglects to comply with any direction given by the Unemployment Insurance Commission, or its duly authorized officers pursuant to the provisions of this Order shall be guilty of an offence and liable on summary conviction to a fine not exceeding $200 or to imprisonment for a term not exceeding three months, or to both such fine and such imprisonment.

Transfer of National Registration to Department of Labour

Order in Council P.C. 2253 (March 21), transfers all National Registration functions and records from the Department of National War Services to the Department of Labour for the purpose of building up the manpower inventory authorized in Order in Council P.C. 1445. The following is the text of the Order:

P.C. 2253

Whereas Section 5 of The Department of National War Services Act, 1940, Chapter 22 of the Statutes of Canada 1940, provides, inter alia, that the Minister of National War Services may with the consent of the Governor in Council (*a*) conduct such national registration and make such survey as may be required for the effective carrying out of the provisions of the aforesaid Act and of The National Resources Mobilization Act 1940, and (*b*) place the results of such registration and of such survey at the disposal of His Majesty in the right of Canada;

And whereas pursuant to the said National War Services Act, 1940, a National Registration Division of the Department of National War Services was set up and in the month of August, 1940, a national registration of all persons resident in Canada over the age of 16 years was conducted and is still being carried on;

And whereas by Order in Council P.C. 1445 of 2nd March, 1942, the Minister of Labour is authorized and directed to establish and maintain an inventory of employable persons in Canada;

And whereas the Minister of National War Services and the Acting Minister of Labour report that a Central Registry is being set up in the Department of Labour for the purpose of establishing and maintaining an inventory of the manpower and womanpower of Canada over the age of 16 years available for the purposes of the armed forces, war industries, agriculture and essential civilian purposes;

That it is intended to correlate the inventory of employable persons provided for by Order in Council P.C. 1445 of 2nd March, 1942, with the information already secured as a result of the said National Registration and to bring and keep all such information up to date with such further information as may from time to time be secured;

That for the purpose of better establishing and maintaining the said Central Registry, it is expedient to transfer to the Minister of Labour the duties, powers and functions vested in the Minister of National War Services to conduct such national registrations and make such surveys as may be required for the effective carrying out of The National Resources Mobilization Act and to place the results of such registrations and surveys at the disposal of His Majesty in the right of Canada and to transfer to the Department of Labour the personnel and records of the aforesaid National Registration Division of the Department of National War Services;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National War Services and the Acting Minister of Labour and under and in virtue of the provisions of the Public Service Re-arrangement and Transfer of Duties Act, Chapter 165 of the Revised Statutes of Canada, 1927, the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of Canada, 1940, is pleased to order as follows:—

1. The duties, powers and functions vested in the Minister of National War Services under the National War Services Act, 1940, with respect to conducting national registrations and making such surveys as may be required for the effective carrying out of the provisions of The National Resources Mobilization Act, 1940, and the placing of the results of such registrations and surveys at the disposal of His Majesty in the right of Canada are hereby transferred to the Minister of Labour and the personnel and the records of the National Registration Division of the Department of National War Services are hereby transferred to the Department of Labour.
2. In respect of the aforesaid National Registration and the aforementioned inventory of employable persons and all information available in the Central Registry, such information or material as may be requir-

ed by the Minister of National War Services to enable him to carry out the National War Services Regulations 1940 (Recruits) shall be furnished and made available to the said Minister.

3. Where a Government Department or any person or body of persons has, by virtue of any Act or Order in Council, power to obtain, for any purpose, information as to matters with respect to which the Minister of Labour is empowered under Order in Council P.C. 1445 of 2nd March, 1942, or under this Order to require information to be given or returns to be made,—
   (a) such department, person or body shall, if so required by the Minister of Labour, exercise that power for the purpose of assisting said Minister in obtaining any such information, and
   (b) any information obtained by such department, person or body, whether upon a requisition of the Minister of Labour or otherwise, may, notwithstanding anything in any other enactment or order, be furnished to the Minister of Labour.
4. All expenditures incurred under Order in Council P.C. 1445 of 2nd March, 1942, and under this order shall be paid out of the moneys provided by The War Appropriation Act or otherwise by Parliament for the purposes of the said Order in Council P.C. 1445 and of this Order.

Physical Re-conditioning of Rejected Recruits

Order in Council P.C. 2229 (March 23), provides for the physical re-conditioning of recruits who have been called up for compulsory military service and have been rejected for physical disabilities.

A recruit so called up and rejected may be asked to report for treatment to the Department of Pensions and National Health if such treatment will make him medically acceptable for military service within a reasonable time. Upon completion of medical treatment, the recruit shall be available for military service.

While undergoing medical treatment, a man without dependents may be paid an allowance of $9.00 per week while a man with dependents may be paid $13.00 per week. Provisions is made for a pension should death or disability result from such remedial treatment. The following is the text of the Order:

P.C. 2229

Whereas the Minister of National Defence, the Minister of Pensions and National Health and the Minister of National War Services report that it has been represented that many men, who have been and in the future will be called out for training under the National War Services Regulations 1940 (Recruits), passed under the National Resources Mobilization Act, 1940, have been and will be rejected for service on account of physical disabilities of various kinds;

That it is stated by examining medical officers that among such physical disabilities are many which can be corrected by hospitalization, and by medical, surgical, dental, dietary, nutritional, and other remedial treatment, to a point where such men may be placed in a military service category;

That it is considered to be in the public interest to provide such remedial treatment; and

That it is considered that the hospital, medical, surgical and other facilities of the Department of Pensions and National Health can be used to advantage in connection with the reconditioning treatment of such men in the manner aforesaid.

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National Defence, the Minister of Pensions and National Health and the Minister of National War Services and under the authority of the National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of 1940, and the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and notwithstanding the provisions of any other Statutes, Regulations, or Orders, is pleased to make the following regulations and they are hereby made and established accordingly:

REGULATIONS

1. A man who has been called out under the National War Services Regulations 1940 (Recruits), and who has not been notified to report to a military training centre due to physical conditions which do not require active remedial treatment in hospital but only the provision of glasses, dental treatment or nutritional improvement, may, notwithstanding anything contained in the said Regulations or in Reserve Army (Special) Regulations 1941, be ordered, and shall be liable, to report to a Training Centre as referred to in said last mentioned Regulations.

2. A man who has been called out under the National War Services Regulations 1940 (Recruits), and who has not been notified to report to a military training centre due to his physical condition which requires active remedial treatment in hospital, and which condition is deemed by competent medical authority sufficiently mendable to permit, within a reasonable length of time of his being placed in a medical category in which he would be acceptable for military service may be notified to report to the Department of Pensions and National Health.

3. Upon so reporting, such man may be afforded the opportunity of accepting and undergoing treatment of any kind prescribed by the Department of Pensions and National Health for the purpose of improving his physical condition.

4. On completion of treatment under the Department of Pensions and National Health, the man shall be immediately available to and shall report to, the Divisional Registrar of the Administrative Division of the Department of National War Services in the Division in which the said man resides.

5. While undergoing the treatment herein provided for, a man, if he has no dependents, may be paid an allowance of $9.00 per week, and if he has a dependent or dependents, an allowance of $13.00 per week. For the purposes of this regulation "dependent" shall have the same meaning as is given to it under the

"Financial Regulations and Instructions for the Canadian Active Service Force (Canada)".

6. (*a*) A pension may be awarded in respect of disability or death arising out of or directly connected with the treatment herein provided as if the man had been a member of the forces;

(*b*) The rate of pension shall be the rate set forth in Schedules A and B of the Pension Act as payable to or in respect of a Lieutenant (military);

(*c*) All claims under this regulation shall be dealt with and adjudicated upon by the Canadian Pension Commission and all provisions of the Pension Act not inconsistent with this regulation shall apply to every such claim;

(*d*) The Canadian Pension Commission shall be and is hereby authorized to require departments of the Government concerned to maintain and furnish such records and information as in the discretion of the Commission shall be necessary to adjudicate upon any claim made under this regulation and such departments shall comply with and carry out such directions in this respect as the Commission may give.

7. The Minister of Pensions and National Health shall have power to issue, or cause to be issued, such orders and instructions as are necessary to give effect to these regulations and to the spirit and intent thereof in so far as they involve matters which pertain to the Department of Pensions and National Health.

8. All expenditures made under these regulations shall be paid out of moneys provided under The War Appropriation Act.

Provision of Remedial Treatment

Order in Council P.C. 2291 (March 23), provides that any man or woman who volunteers for active service in the Canadian Army and is rejected because of physical condition may receive remedial treatment from the Department of Pensions and National Health.

Those who receive such remedial treatment must (*a*) be considered such as will be fitted for active service, (*b*) agree to accept treatment, and (*c*) undertake to enlist in the active forces upon successful completion of the treatment.

While undergoing medical treatment, a volunteer without dependents may be paid $9.00 per week, with dependents $13.00 per week. Provision is made for a pension should death or disability result from the remedial treatment. The following is the text of the Order:

P.C. 2291

Whereas it has been represented that many men and women who have vounteered, or may in the future volunteer for service in active units and formations of the Canadian Army, have been and will be rejected for service on account of physical disabilities of various kinds;

And whereas it is stated by examining medical officers that among such physical disabilities are many which can be corrected by hospitalization, and by medical, surgical, dental, dietary, nutritional, or other remedial treatment to a point where such men and women may be placed in a military service category;

And whereas it is considered to be in the public interest to provide such remedial treatment;

And whereas it is considered that the hospital, medical, surgical, and other facilities of the Department of Pensions and National Health can be used to advantage in connection with the reconditioning treatment of such men and women in the manner aforesaid;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National Defence and the Minister of Pensions and National Health, and under the authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada 1927, and notwithstanding the provisions of any other statutes, regulations or orders, is pleased to make the following regulations and they are hereby made and established accordingly:

Regulations

1. (*a*) A man or woman who volunteers for active service in the Canadian Army (hereinafter called a volunteer), and has not been accepted due to his or her physical condition which requires more extensive remedial treatment than is now, or may be, provided by the Army, and which condition is deemed by competent medical authority sufficiently mendable to permit within a reasonable length of time of his or her being placed in a medical category in which he or she would be acceptable for active service, may be furnished with such remedial treatment by the Department of Pensions and National Health under the following conditions:

(*b*) That the volunteer has been certified by appropriate competent medical authority as being a suitable subject to receive remedial treatment of such a character as will fit him or her for active service within a reasonable period of time.

(*c*) That the volunteer agrees to accept such treatment.

(*d*) That the volunteer gives an undertaking in writing in satisfactory form to enlist for active service on the completion of such treatment and upon competent medical authority certifying that he or she is fit for such service.

(*e*) That the volunteer gives an undertaking in writing in suitable form that, if after a reasonable period of treatment, he or she is certified by competent medical authority as being unfit for enlistment for active service, he or she will release the Crown from all claims arising out of or attributable to the treatment granted under, or anything done in pursuance of these regulations, save and except as provided in Para. 2 thereof.

2. (*a*) While undergoing the treatment herein provided for, a man or woman, if he or she has no dependents, may be paid an allowance of $9.00 per week, and if he or she has a dependent or dependents, an allowance of $13.00 per week. For the purposes of this regulation, "dependent" shall have the same meaning as is given to it under the "Financial Regulations and Instructions for the Canadian Active Service Force (Canada)".

(*b*) A pension may be awarded in respect of disability or death arising out of or directly connected with the treatment herein provided as if the man or woman had been a member of the forces.

(*c*) The rate of pension shall be the rate set forth in Schedules A and B of the Pension Act as payable to or in respect of a Lieutenant (Military).

(*d*) All claims under this regulation shall be dealt with and adjudicated upon by the Canadian Pension Commission and all provisions of the Pension Act not inconsistent with this regulation shall apply to every such claim.

3. The Canadian Pension Commission shall be and is hereby authorized to require Departments of the Government concerned to maintain and furnish such records and information as in the discretion of the Commission shall be necessary to adjudicate upon any claim made under this regulation and such Departments shall comply with and carry out such directions in this respect as the Commission may give.

4. The Minister of Pensions and National Health shall have power to issue, or cause to be issued, such orders and instructions as are necessary to give effect to these regulations and to the spirit and intent thereof in so far as they involve matters which pertain to the Department of Pensions and National Health.

5. All expenditures made under these regulations shall be paid out of moneys provided under the War Appropriation Act.

Training of Personnel Managers for Industry

Order in Council P.C. 26/1840 (March 10), provides for the training of personnel managers for industry. Through more effective personnel programs in industry, the Government hopes for more co-operation between labour and management with a resulting increase in efficiency.

Personnel training is to be undertaken by universities under conditions satisfactory to the Minister of Labour. The training is to be of a practical nature. Reasonable costs will be defrayed by the Government. The following is the text of the Order:

P.C. 26/1840

The Board have had under consideration a submission from the Honourable the Minister of Labour reporting as follows:

(1) Evidence is accumulating that problems of personnel administration in the war industries are becoming increasingly important and require the attention of persons of specialized training;

(2) The adoption of clear-cut personnel policies and their administration by effective personnel departments make for the removal of misunderstanding and lead to fuller co-operation between employers and employees;

(3) It would be advisable for the Government to encourage the creation of personnel departments in all moderate and large sized industrial establishments; and

(4) In the present emergency it would lead to more efficient prosecution of the war effort if the Government would, as in the United Kingdom, facilitate the training of suitably qualified persons in the fundamental principles and practice of personnel management.

The Board concur in the above report and recommend that, under the War Measures Act, the following regulations be approved:

1. The Minister of Labour is hereby authorized to make provision for the extension and improvement of training in personnel management and for that purpose there may be appointed, in conformity with existing regulations, an official to be known as the Director of Personnel Training, together with such technical and clerical staff as may be found necessary.

2. The duties of the Director of Personnel Training shall be to develop plans, subject to the approval of the Minister, for the promotion of sound personnel management primarily, but not exclusively, in the war industries.

3. In the furtherance of such plans, the Minister may enter into agreements with universities which submit approved plans for practical courses in personnel management to defray the reasonable costs of any such course. Such agreements shall provide that the Department of Labour shall make an accountable advance to any such university to defray the necessary travelling expenses of selected applicants who successfully complete such course. Such expenses shall not exceed the actual out-of-pocket expenses of the applicant, viz., transportation, berth if required, and meals en route from his home or place of employment to the place where such course is given, and return, and shall not include living expenses while in attendance at such course.

4. The Minister may appoint without remuneration experienced personnel managers employed in industry to serve as consultants to less experienced personnel managers in other industries and establishments and may reimburse them for any actual travelling expenses incurred in connection with such duties.

Extension of Age for Compulsory Military Service

Order in Council P.C. 2192 (March 21), raises the age limit for compulsory military service from 24 to 30 years for unmarried men and widowers without children. The following is the text of the Order:

P.C. 2192

The Committee of the Privy Council have had before them a report, dated 19th March, 1942, from the Minister of National War Services, representing that the National War Services Regulations, 1940 (Recruits) (Consolidation 1941) as amended provide that men of any age classes, class or part of any age class, may be called out for military training by Proclamation of the Governor in Council and that it is now expedient that a Proclamation calling out men who were on the fifteenth day of July, 1940, unmarried or widowers without child or children and who were born in any of the years 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914, 1913 or 1912, but that persons born in the year 1921 shall not be called out until they reach the age of twenty-one years.

Schedule of Restricted Occupations

Order in Council P.C. 2250 (March 21), restricts the entrance of physically fit men of military age (17-45) into a considerable list of occupations. It is the purpose of this Order to provide a larger number of men for the armed forces and for the more essential tasks in civilian life.

To provide flexibility and to take unusual circumstances into account, the Director of National Selective Service may grant permission for a man to enter one of the restricted occupations. This permission may be revoked at any time by the Director. Decisions of the Director with respect to applications for permission to enter a restricted occupation may be appealed to a National War Services Board. The decision of this Board is final. The following is the text of the Order:

P.C. 2250

Whereas the Minister of National War Services and the Acting Minister of Labour report that there is a growing scarcity of men available for service in His Majesty's armed forces and for employment in the war industries and that it is necessary for the effective prosecution of the war to take steps to restrict the entry of men who are of military age and physically fit for service with the armed forces into certain occupations which are relatively unessential or can be satisfactorily filled by women or men who are beyond military age or are physically unfit for service with the armed forces;

Therefore His Excellency the Governor General in Council, on the recommendation of the Minister of National War Services and the Acting Minister of Labour and under the authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and The National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of Canada, 1940, is pleased to make and doth hereby make the following order:

Order

1. In this Order, unless the context otherwise requires:

(*a*) "Administrative Division" means an administrative territorial division established under the National War Services Regulations, 1940 (Recruits);

(*b*) "Applicant" means any person who has applied to a National Selective Service Officer for permission to enter into employment in a restricted occupation;

(*c*) "Director of National Selective Service" means the person appointed as such by the Governor in Council;

(*d*) "National Selective Service Officer" means, in respect of any applicant, the person appointed as such by the Director of National Selective Service for the area in which such applicant resides;

(*e*) "Appeal Board" means, in respect of any applicant, the National War Services Board established under the National War Services Regulations, 1940 (Recruits) for the Administrative Division or part thereof in which such applicant resides;

(*f*) "Divisional Registrar" means, for any Administrative Division, the Registrar appointed for such Division under the National War Services Regulations, 1940 (Recruits);

(*g*) "Restricted occupation" means any occupation described in the schedule to this Order.

2. (1) No male person shall enter into employment in any restricted occupation and no person shall take any male person into employment in any restricted occupation unless such male person has obtained written permission from the National Selective Service Officer to accept such employment or presents to the prospective employer

(*a*) a birth certificate or other evidence that he is not of the ages of seventeen years to forty-five years inclusive; or

(*b*) a certificate of honourable discharge from service in one of His Majesty's armed forces; or

(*c*) evidence that he has applied for active service in one of His Majesty's armed forces during the present war and of having been rejected because of physical unfitness.

(2) Any person may apply to the National Selective Service Officer for permission to enter into employment in a restricted occupation and such National Selective Service Officer may grant or refuse such permission.

(3) A National Selective Service Officer may at any time revoke any permission granted by him.

3. The Director of National Selective Service may issue instructions

(*a*) prescribing the matters to be considered by National Selective Service Officers in granting or refusing or revoking permission to enter into employment in a restricted occupation, and

(*b*) prescribing the conditions which may be imposed by National Selective Service Officers in granting such permission.

4. If any question arises as to whether an employment is in a restricted occupation, such question shall be decided by the Director of National Selective Service and his decision thereon shall be final and conclusive.

5. (1) In any case where a National Selective Service Officer has granted, refused to grant, or has revoked permission to enter into employment in a restricted occupation, the applicant, either of his parents, his guardian, his present or prospective employer, a representative of any department of the government of Canada, or a representative of any interested trade union, or other similar organization may, within ten days from such refusal, appeal therefrom by notice in writing to the Divisional Registrar of the Administrative Division in which the applicant resides; and the Appeal Board for the area in which the applicant resides shall forthwith hear and determine such appeal and such decision shall be final and conclusive.

(2) Such of the provisions of The National War Services Regulations, 1940 (Recruits) with reference to National War Services Boards as are not inconsistent with these regulations shall apply *mutatis mutandis* to appeals under this section.

(3) Any person who appears before an Appeal Board shall do so at his own expense.

(4) No proceeding authorized or pending before an Appeal Board and no decision of an Appeal Board shall, by means of an injunction,

prohibition, mandamus, certiorari, habeas corpus or other process, issuing out of court, be enjoined, restrained, stayed, removed or subjected to review or consideration on any ground whether arising out of alleged absence of jurisdiction in an Appeal Board, nullity, defect or irregularity of the proceedings or decision be questioned, reviewed or reconsidered.

6. No member of an Appeal Board shall be responsible at law for anything done by him in good faith in the performance of his duties under this order, and no action shall be taken against any member of an Appeal Board in respect of the performance or non-performance of his duties under this order.

7. (1) In any prosecution for entering into an employment or employing any person contrary to this order, the burden of proving compliance with this order shall be upon the person charged with the offence.

(2) In any prosecution under this order, the complaint shall be made or the information laid within one year from the time when the matter of the complaint or information arose.

(3) Sections sixty-nine and seventy of the Criminal Code shall apply *mutatis mutandis* to the provisions of this Order.

8. Any person who contravenes any of the provisions of this order shall be guilty of an offence and liable upon indictment or summary conviction to imprisonment for a term not exceeding twelve months with or without hard labour, or to a fine not exceeding $500, or to both such imprisonment and such fine.

9. This order shall be effective on the twenty-third day of March, 1942.

SCHEDULE

1. Bookkeepers, cashiers, stenographers, typists, clerks, office appliance operators, messengers, salesmen and sales clerks, taxicab drivers.

2. Any occupation in wholesale or retail trade, advertising and real estate.

3. Any occupation in or directly associated with entertainment, recreational or personal service, including but not restricted to theatres; film agencies; motion picture companies; clubs; bowling alleys; pool rooms; sports; barbering and hairdressing; domestic service; dyeing, cleaning and pressing; hotels and lodging houses; laundering; restaurants, cafes and taverns; funeral service, baths, guide service, shoe shining.

4. Any occupation in the manufacture or production of:—

(1) biscuits, confectionery, cocoa;
(2) bread and baking products;
(3) aerated and mineral waters and other beverages;
(4) liquors, wine, beer;
(5) rubber products;
(6) tobacco, cigars, cigarettes;
(7) leather and fur products;
(8) textile products;
(9) furniture and upholstering;
(10) photography;
(11) printing, publishing and engraving;
(12) radios, refrigerators, washing machines and vacuum cleaners;
(13) jewellery and watchmaking;
(14) pottery and china;
(15) soaps, and toilet preparations and articles;
(16) mattresses;
(17) musical instruments;
(18) barber and beauty shop equipment;
(19) cameras and films;
(20) sporting goods;
(21) games, toys and novelties.

5. Any occupation in the repair of clothing, boots and shoes, furniture and household equipment, jewellery or watches, musical instruments.

Stabilization of Employment in Agriculture

Order in Council P.C. 2251 (March 21), stabilizes employment in agriculture. No person employed in agriculture on March 23, 1942, may enter into any employment outside agriculture except to enlist in the armed forces, to take a seasonal position in a primary industry, or to undergo compulsory military training, unless he has permission from the Director of National Selective Service through a National Selective Service officer. However, no person employed in agriculture on March 23, 1942, may be called out for compulsory military training unless his services are not essential to agriculture or unless he has ceased to be employed in agriculture. Before granting permission for an agricultural worker to accept employment outside agriculture, the National Selective Service officer must consider "the conditions essential for the maintenance or necessary increase of agricultural production in Canada" and the importance of the applicant thereto. Such permission may be revoked at any time. Any decision of a National Selective Service officer with respect to an application for employment outside agriculture may be appealed to a National War Services Board. The decision of this Board is final. The following is the text of the Order:

P.C. 2251

Whereas the Minister of National War Services and the Acting Minister of Labour report, that there is a growing shortage of agricultural labour and that it is necessary for the effective prosecution of the war to take steps to stabilize employment in agriculture.

Now therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National War Services and the Acting Minister of Labour, and under authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and The National Resources Mobilization Act, 1940, Chapter 13 of the Statutes of Canada, 1940, is pleased to make the following regulations, and they are hereby made and established accordingly:—

1. These regulations may be cited as the Stabilization of Employment in Agriculture Regulations, 1942.

2. In these Regulations, unless the context otherwise requires—

(*a*) "Administrative Division" means an administrative territorial division established under the National War Services Regulations, 1940, (Recruits);
(*b*) "agriculture" means the production of field crops, fruits, vegetables, honey, poultry, eggs, livestock, milk, butter or cheese;
(*c*) "applicant" means any person who has applied to a National Selective Service Officer for permission to enter into employment outside agriculture;
(*d*) "Director of National Selective Service" means the person appointed as such by the Governor in Council;
(*e*) "National Selective Service Officer" means, in respect of any applicant, the person appointed as such by the Director of National Selective Service for the area in which such applicant resides;
(*f*) "Appeal Board" means, in respect of any applicant, the National War Services Board established under the National War Services Regulations, 1940 (Recruits) for the Administrative Division or part thereof in which such applicant resides;
(*g*) "Divisional Registrar" means, for any Administrative Division, the Registrar appointed for such Division under The National War Services Regulations, 1940 (Recruits);
(*h*) "primary industry" means and includes lumbering and logging, forestry, fishing and trapping;
(*i*) "lumbering and logging" includes all wood or forest operations but does not include any saw mill, planing mill, shingle mill or wood-processing plant which, in the opinion of the Minister of Labour, is reasonably continuous in its operations;
(*j*) "forestry" means the cultivation of forests, the management of growing timber, and the prevention of forest fires;
(*k*) "fishing," means the art or practice of catching fish, whether for purposes of gain or not;
(*l*) "person wholly or mainly employed in agriculture" means any person who, on the 23rd day of March, 1942, was wholly or mainly employed or engaged in agriculture, and includes any person, who, on the said 23rd day of March, 1942, was employed or engaged, but only seasonally, in a primary industry, but whose last employment or occupation immediately prior to such seasonal employment or engagement in a primary industry was wholly or mainly in agriculture.

3. (1) No male person wholly or mainly employed in agriculture shall enter into any employment outside agriculture except

(*a*) active service in any of His Majesty's armed forces by voluntary enlistment,
(*b*) seasonal employment in a primary industry, or
(*c*) compulsory military training, if under The National War Services Regulations, 1940 (Recruits) it is established to the satisfaction of the National War Services Board concerned, that such person is not an essential worker in agriculture,

unless he has obtained written permission from the National Selective Service Officer to enter such employment; and no person shall take into any such employment any male person wholly or mainly employed in agriculture unless such male person has obtained such permission.

(2) Any person wholly or mainly employed in agriculture may apply to the National Selective Service Officer for permission to enter into employment outside agriculture and such National Selective Service Officer may grant or refuse such permission after taking into consideration

(*a*) the conditions essential for the maintenance or necessary increase of agricultural production in Canada, and
(*b*) the importance of the applicant to the maintenance or increase of such production.

(3) A National Selective Service Officer may at any time revoke any permission granted by him.

4. The Director of National Selective Service may issue instructions, subject to the provisions of subsection two of section three of these regulations,

(*a*) prescribing the matters to be considered by the National Selective Service Officers in granting or refusing or revoking permission to enter employment outside agriculture, and
(*b*) prescribing the conditions which may be imposed by National Selective Service Officers in granting such permission.

5. (1) In any case where a National Selective Service Officer has granted, refused to grant, or has revoked permission to enter into employment outside agriculture, the applicant, either of his parents, his guardian, his present or prospective employer, a representative of any department of the government of Canada, or a representative of any interested trade union, agricultural association or other similar organization may, within ten days from such refusal, appeal therefrom by notice in writing to the Divisional Registrar of the Administrative Division in which the applicant resides; and the Appeal Board for the area in which the applicant resides shall forthwith hear and determine such appeal and such decision shall be final and conclusive.

(2) Such of the provisions of The National War Services Regulations, 1940 (Recruits) with reference to National War Services Boards as are not inconsistent with these regulations shall apply *mutatis mutandis* to appeals under this section.

(3) Any person who appears before an Appeal Board shall do so at his own expense.

(4) No proceeding authorized or pending before an Appeal Board and no decision of an Appeal Board shall, by means of an injunction, prohibition, mandamus, certiorari, habeas corpus or other process, issuing out of court, be enjoined, restrained, stayed, removed or subjected to review or consideration on any ground whether arising out of alleged absence of jurisdiction in an Appeal Board, nullity, defect or irregularity of the proceedings or any other cause whatsoever, nor shall any such proceedings or decision be questioned, reviewed or reconsidered.

6. No member of an Appeal Board shall be responsible at law for anything done by him in good faith in the performance of his duties under these regulations, and no action shall be taken against any member of an Appeal Board in respect of the performance or non-performance of his duties under these regulations.

7. (1) In any prosecution for entering into an employment or employing any person con-

trary to these regulations, the burden of proving compliance with these regulations shall be upon the person charged with the offence.

(2) In any prosecution under these regulations, the complaint shall be made or the information laid within one year from the time when the matter of the complaint or information arose.

(3) Sections sixty-nine and seventy of the Criminal Code shall apply *mutatis mutandis* to the provisions of these regulations.

8. Any person who contravenes any of the provisions of these regulations shall be guilty of an offence and liable upon indictment or summary conviction to imprisonment for a term not exceeding twelve months with or without hard labour, or to a fine not exceeding $500, or to both such imprisonment and such fine.

9. These regulations shall be effective on the twenty-third day of March, 1942.

Postponement of Military Service of Agricultural Workers

Order in Council P.C. 2252 (March 21), concerns the calling of agricultural workers for compulsory military service. Any agricultural worker who is ordered to report for compulsory military training may apply to a National War Services Board for a postponement and this Board *must* grant such postponement unless it can be shown that the applicant is not essential to agriculture or that he has ceased to be employed in agriculture. Postponements are subject to review from time to time. The following is the text of the Order:

P.C. 2252

His Excellency the Governor General in Council, on the recommendation of the Minister of National War Services and under the authority of the National Resources Mobilization Act and the War Measures Act, is pleased to amend the National War Services Regulations, 1940 (Recruits) (Consolidation 1941), established by Order in Council P.C. 1822, of March 18th, 1941, as amended, and they are hereby further amended as follows:

1. Subsection (1) of section 3 is amended by inserting the following after paragraph (*b*) thereof:

"(*bb*) 'Agriculture' means the production of field crops, fruit, vegetables, honey, poultry, eggs, live stock, milk, butter, or cheese."

2. Subsection (1) of section 3 is further amended by inserting the following after paragraph (*j*) thereof:

"(*jj*) 'person wholly or mainly employed in agriculture' means any person who, on the 23rd day of March, 1942, was wholly or mainly employed or engaged in agriculture, and includes any person who, on the said 23rd day of March, 1942, was employed or engaged, but only seasonally, in a primary industry, but whose last employment or occupation immediately prior to such seasonal employment or engagement in a primary industry was wholly or mainly in agriculture."

"(*jk*) 'primary industry' means and includes lumbering and logging, forestry, fishing and trapping."

"(*jl*) 'lumbering and logging' includes all wood or forest operations but does not include any saw mill, planing mill, shingle mill or wood-processing plant which, in the opinion of the Minister of Labour, is reasonably continuous in its operations."

"(*jm*) 'forestry' means the cultivation of forests, the management of growing timber and the prevention of forest fires."

"(*jn*) 'fishing' means the art or practice of catching fish, whether for purposes of gain or not."

3. Subsection (4) of section 8 is revoked and the following substituted therefor:

"(4) A Board, subject to the approval of the Minister, may make rules not inconsistent with these regulations for its guidance and to govern its procedure: Provided that at the hearing of all applications made to a Board, a representative of the Department of National Defence, a representative of the National War Labour Board, a representative of Agriculture and a representative of the Director of National Selective Service shall be entitled to be present and to make such representations as they may deem fit."

4. Subsection (1) of section 16 is revoked and the following substituted therefor:

"(1) All hearings of the Boards shall be in camera, and no person shall be entitled to be represented by counsel, advocate or solicitor: Provided that at hearings of the Board the representative of the Department of National Defence, the representative of the National War Labour Board, the representative of Agriculture and the representative of the Director of National Selective Service shall be entitled to make such representations as they may deem fit."

5. The following is inserted after subsection 2 of section 14 as subsection (3) thereof:

"(3) Notwithstanding the provisions of subsections (1) and (2) of this section, the Board shall, from time to time upon the application of a person wholly or mainly employed in agriculture, grant him a postponement order until further notice, unless it is established to the satisfaction of the Board that such person is not an essential worker in agriculture, or that such person has at any time subsequent to the 23rd day of March, 1942, ceased to be actually employed or engaged in agriculture or in a primary industry, and such postponement order shall be an allocation of such person to agriculture; Provided that such postponement and allocation shall be subject to review and cancellation by the Board if it is brought to the attention of the Board by any of the representatives referred to in sections 8 and 16 of these Regulations and the Board is satisfied, after hearing the person concerned, that such person has at any time subsequent to the 23rd day of March, 1942, ceased to be actually employed or engaged in agriculture or in a primary industry."

Distribution of Scientific and Technical Personnel

Order in Council P.C. 638 (March 4), provides for a more effective distribution of scientific and technical personnel for essential purposes such as engineers, chemists, physicists, and architects. The Order is based, in part, upon the idea that scientific and technically trained personnel hesitate to move from less to more essential work because of the temporary nature of the latter and the insecurity incidental thereto and that the services of these persons are so essential that they should be treated in the matter of reinstatement as are the members of the armed services.

Under the provisions of this Order, any scientifically or technically trained person may be requested to perform work of a more essential nature than that in which he is engaged and for another employer. The employer of such a person must release him without prejudice and must reinstate him in as favourable circumstances as he would enjoy had he not left.

Both employer and employee must notify the Director of any change, proposed or actual, in the employment status of a technically-trained person.

No employer may engage a technician unless he notifies the Director of the vacancy and no technician may accept employment without notifying the Director that his services are available.

All employment contracts must be approved by the Minister of Labour.

The following is the text of the Order.

P.C. 638

Whereas the Minister of Labour reports,—

That having regard to the needs of the armed forces and essential industries there may be a maldistribution of professional engineers, chemists, research scientists, physicists, architects and other technically trained persons in undertakings engaged on essential work;

That the Wartime Bureau of Technical Personnel, which is responsible to the Minster of Labour, was established by Order in Council to organize the placement of technical personnel in the war industries and to co-operate with the Civil Service Commission in arranging for the placement of technical personnel in the Government service; that the Bureau has considerable information concerning such persons, including their qualifications, occupations, the names of their employers and other particulars and that it is desirable that such information be extended and kept up to date;

That there are such persons employed in undertakings not engaged or only partially engaged on essential work and in some undertakings the number employed appears to be in excess of the number required, having regard to their qualifications, the work on which they are engaged and to the national interest at this time;

That after the war, undertakings now engaged on essential work are likely to suffer such a diminution in operations that the number of such persons required in these undertakings will be much smaller;

That there is reason to believe that where such persons are not employed on essential work they would willingly undertake to perform the more arduous duties on essential work if they were so requested by the Minister of Labour and if they were assured that they would be reinstated in their former employment; and

That it is desirable that there should be similarity of treatment in the matter of reinstatement in employment of those who volunteer for service in His Majesty's forces and those who consent to perform services in an undertaking engaged on essential work.

And whereas the War Measures (Civil Employment Reinstatement) Regulations, 1941 (P.C. 4758), require an employer by whom any person accepted for service in His Majesty's forces was employed when accepted for such service to reinstate him in employment at the termination of that service under conditions not less favourable to him than would have been applicable to him had he not enlisted.

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under the authority of the War Measures Act, Chapter 206, Revised Statutes of Canada, 1927, is pleased to make the following regulations and they are hereby made and established accordingly:

Regulations

1. These Regulations may be cited as the Essential Work (Scientific and Technical Personnel) Regulations, 1942.

2. In these Regulations,

(*a*) "Director" means the Director of the Wartime Bureau of Technical Personnel;

(*b*) "employer" includes the Crown in the right of the Dominion and in the right of any province;

(*c*) "essential work" means work appearing to the Minister of Labour to be essential for the defence of Canada or the efficient prosecution of the war or essential to the life of the community;

(*d*) "Minister" means the Minister of Labour; ;

(*e*) "undertaking" includes any branch or department of an undertaking.

3. These Regulations apply to the classes of persons described in the Schedule hereto.

4. Any request made by the Minister, any direction given by him or any notice required to be received or sent by him under these Regulations may be made, given, received or sent, as the case may be, on his behalf by the Director.

5. (*a*) Any person to whom these Regulations apply may be requested by the Minister to perform, in an undertaking engaged on essential work, such services as that person is, in the opinion of the Minister, capable of performing, being services in the performance of which he should, by reason of his qualifications, in the Minister's opinion, be able to contribute most effectively to the carrying on of essential work.

(*b*) Notwithstanding any provision in the contract of employment between an employer and any person who is requested by the Minister to perform such services as aforesaid and who consents so to do, it shall be the duty of the employer to release the employee from his contract of employment within thirty days

after written notice of the proposed change has been received from the Minister by the employer: provided that during the said period of thirty days the Minister shall consider any written objections made to the proposed change by the employer. The Minister's decision in the matter shall be final.

(*c*) Notice of the proposed change shall be sent by the Minister to the employer or his agent by post and it shall be deemed to have been received at the time when a letter containing the notice would be delivered in the ordinary course of post and in proving such sending it shall be sufficient to prove that it was properly addressed to the employer's place of business and mailed.

6. It shall be the duty of any employer, who employed a person to whom these Regulations apply immediately before that person at the request of the Minister entered into a contract with another employer to perform services in an undertaking engaged on essential work, to reinstate him at the termination of his contract for such services in a position and under conditions not less favourable than would have been applicable to him had he not consented to perform such services. The provisions of this section shall not apply to the Civil Service of Canada or to the Civil Service of any province of Canada.

7. (*a*) Where the contract of employment of any person to whom these Regulations apply is to be terminated, or is terminated, it shall be the duty of that person and of his employer each to notify the Director of the proposed or actual termination of the contract.

(*b*) The notices required by this section shall be given immediately after the party giving notice of his intention to terminate the contract of employment has notified the other of his intention.

8. (*a*) Any employer who desires to engage a person to whom these Regulations apply must notify the Director of the post to be filled.

(*b*) Any person to whom these Regulations apply who desires to enter into a contract of employment must notify the Director that his services are available.

9. The notices required by sections 7 and 8 shall give the names of the parties and particulars of the business of the employer, the work on which the employee was, or is, to be engaged, his salary, qualifications, and any other particulars considered by the parties likely to facilitate the proper carrying out of these Regulations. The Minister shall have power to require such further particulars as he may consider necessary for the proper carrying out of these Regulations.

10. After the date on which these Regulations become effective, no contract of employment or arrangement for the services of a person to whom these Regulations apply shall be made until it has been approved by the Minister. Any agreement or arrangement for such services which is made without such approval shall be null and void and where such an agreement or arrangement purports to be for services in an undertaking engaged on essential work, the provisions of section 6 of these Regulations shall not apply.

11. Where a person to whom these Regulations apply enters into a contract to perform services in an undertaking engaged on essential work and the contract is approved by the Minister, such person shall be deemed to have undertaken to perform such services at the request of the Minister and the provisions of section 6 shall apply to such person.

12. In any proceedings for the violation of section 6 of these Regulations, it shall be a defence for the employer who employed a person to whom these Regulations apply before that person agreed, at the request of the Minister, to perform services in an undertaking engaged on essential work, to prove,—

(1) that the person formerly employed by him did not, within two weeks after the termination of his contract for employment on essential work, apply to him for reinstatement; or

(2) that, subject to the provisions of subsection (*a*), he failed without reasonable excuse to present himself for employment at the time and place notified to him by the employer; or

(3) that, by reason of a change of circumstances, other than the engagement of some other person to replace him, it was not reasonably practicable to reinstate him or that his reinstatement, in a postion and under conditions not less favourable to him than those which would have been applicable to him had he not undertaken essential work, was impracticable and that the employer had offered to reinstate him in the most favourable position and under the most favourable conditions reasonably practicable; or

(4) that he was physically or mentally incapable of performing work available in the employer's service; or

(5) that he was employed to take the place of an employee who had been previously accepted for service in His Majesty's forces or of an employee, being a person to whom these Regulations apply, who, after the date on which they became effective, undertook, at the request of the Minister, to perform services in an undertaking engaged on essential work.

13. Where an employer has reinstated a former employee in accordance with section 6 of these Regulations, he shall not, without reasonable cause, terminate the employment of that employee and, in any proceedings for violation of this section in any case where the employment was terminated within six months of the reinstatement, the onus shall be on the employer to prove that he had reasonable cause for terminating the employment.

14. An employer shall not terminate the employment of any employee to whom these Regulations apply in the expectancy that the employee, at the request of the Minister, will agree to perform services under another employer. In any proceedings for violation of this section, if the court is of the opinion that there are reasonable grounds for believing that the employment was terminated in violation of this section, the employment shall be deemed to have been so terminated unless the employer proves that the termination was for a reason unconnected with such expectancy.

15. Nothing in these Regulations shall confer on any employer authority to make any contract or arrangement with reference to the period of employment, in any undertaking engaged on essential work, of any of his

employees to whom these Regulations apply, and who, at the request of the Minister, consent to perform services in such an undertaking, which he is not authorized to make under any power already possessed by him; but where any employer has entered into an agreement with his employees, being persons to whom these Regulations apply, to restore to their positions employees who undertake to perform services in undertakings engaged on essential work, such agreement shall continue in force to the extent that it is not less advantageous to an employee than the provisions of these Regulations, subject to such interpretation as may be mutually agreed to by the contracting parties.

16. The Minister may make all such orders as he may deem necessary or desirable to carry out the purpose of these Regulations and such orders shall have the force of law.

17. Any person to whom these Regulations apply who fails to comply with the provisions of section 7 or 8 of these Regulations, or of any order made under the authority of these Regulations, shall be guilty of an offence and liable on summary conviction to a fine not exceeding one hundred dollars.

18. Any employer or official who contravenes or fails to comply with the provisions of section 5, 6, 7, 8, 13 or 14 of these Regulations, or of any order made under the authority of these Regulations, shall be guilty of an offence and liable on summary conviction to a fine not exceeding five hundred dollars, and, where the offence is under section 6, 13 or 14, the court shall, in addition, order him to pay to the person whom he has failed to reinstate, or whose employment he has terminated, a sum not exceeding an amount equal to three months' remuneration at the rate at which he was being remunerated by that employer when he undertook, at the request of the Minister, to perform services in an undertaking engaged on essential work.

SCHEDULE

1. A person who is normally engaged in the engineering profession in a consulting, technical or supervisory capacity in design, construction, manufacture, operation or maintenance and who has had a regular professional training in practice and in theory as an engineer in any of the following branches of engineering: civil, mechanical, electrical, chemical, metallurgical and mining.

2. A production, industrial or other engineer or chemist who normally holds in any engineering works or manufacturing establishment a position of authority involving responsibility for any phase of executive management or control of any technical function.

3. A person who has obtained a degree at any Canadian or other recognized university and who is normally engaged as a teacher of engineering science or of any branch of science at a university or technical college.

4. A person who has been trained, or who is or has been normally engaged, in the practice of any branch of the science of chemistry but not including a registered pharmacist.

5. A research scientist, that is, a person who, by training or practice, is skilled in the independent search for new knowledge of the properties of matter or energy.

6. A person, other than a teacher, who has obtained a degree at any Canadian or other recognized university in Engineering, Chemistry, Physics, Geology, Mathematics, Architecture or in any natural science, or who is a technically qualified member of the Engineering Institute of Canada, the Canadian Institute of Chemistry, the Canadian Institute of Mining and Metallurgy, the Royal Architectural Institute of Canada or of any provincial association of professional Engineers, Chemists or Architects.

7. A person, not in the classes described above, who, in the opinion of the Minister, posseses technical qualifications and skill which are needed in undertakings engaged on essential work.

School Children to Help on Farms in New York and New Jersey

The New York State Legislature has enacted a measure to permit healthy children over 14 years of age to be absent from school for not more than one month in the school year to work on farms during the planting and harvesting seasons. A County Agricultural Defence Committee must certify that there is a shortage of farm labour. The absence of these children from school will not reduce state grants for education. Regulations governing working conditions of the children are to be made by the State authorities.

New Jersey has passed a similar law permitting children between 14 and 16 to absent themselves from school for not more than 15 days in any school year to engage in farm work. Juveniles over 16 may be employed in full-time agricultural work. Wages paid to the children must not be less than those currently received by adults and hours are limited to eight a day for a six-day week or ten for a five-day week. If the young people are sent away from home, adequate provision for their transportation, accommodation and supervision must be made.

To supervise the release of school children over 14 for farm work, an 11-man State Commission on Student Service was provided for in the Act. Its members are to be appointed by the heads of the State departments of labour, education, health and agriculture, the Director of the U.S. Employment Service for New Jersey and the presidents of several civic groups. The Commission will coordinate its activities with those of the U.S. Employment Service and the State Defence Council. For local administration it will set up County Commissions composed of representatives of government agencies and other organizations.

Conditions under which releases from school may be granted are set forth in the Act. All requests for student farm labour must be referred to the Commission which will permit release of students only if it is satisfied that all other sources of labour have been exhausted. Releases will be granted only after April 1 in the spring term and before November 1 in the fall term. Students must obtain the consent of school heads when seeking release, and are expected to make up the work lost during absence.

OPERATION OF PRICE CONTROL IN CANADA

Conservation and Restriction Orders to meet Civilian Shortages—Maximum Price Orders Issued—Subsidies—Prosecutions

DURING the past month the Waritme Prices and Trade Board has had to take action in an increasing number of cases of civilian shortages, and its administrators have issued a number of conservation and restriction orders. New orders issued under the simplification program have particularly stressed conservation of materials, and two subsidiary corporations have been set up under the board to deal with problems arising out of the shortages of woollen goods, and the need for vigorous salvage of all scarce materials. To check depletion of domestic supplies export controls have been extended.

Import subsidies have been restored on half a dozen commodities and special import problems dealt with by the establishment of a rice importers and distribution committee and by the Commodity Prices Stabilization Corporation buying up the whole Canadian supply of Australian currants and raisins for domestic distribution.

A number of price and cost problems have been met by maximum price orders, ceiling adjustments or subsidies and a redistribution of a burden of higher costs. Outstanding in importance among these is the adjustment of manufacturers' prices on a number of groceries, and of canners' prices on last season's pack.

There have been a number of further prosecutions for rentals violations and sugar hoarding, other hoarding problems have arisen and the first conviction has been registered for violation of the Maximum Prices Regulations.

A number of new regional sub-offices have been set up and the board's system of licensing came into effect at the end of the month.

Conservation and Restriction Orders

Metals.—Following up the earlier restriction order on farm equipment (Administrators' Order No. A-1), the Administrator has emphasized the fact that despite the wartime urgency of agriculture there is not enough metal available to allow the same priority to be given agricultural equipment as is given to war machines. Existing machinery on Canadian farms must be repaired and put into more efficient use.

To economize metal, restrictions on the sizes and shapes of containers have been extended by a series of Administrators' orders affecting tobacco containers, which are to be packed more tightly (Administrators' Order No. A-40); containers used in packing meat and meat products (Administrators' Order No. A-43); tinplate containers for frozen eggs (Administrators' Order No. A-74); and containers for paints and varnishes (Administrators' Order No. A-16).

Cast iron boilers and radiators have been simplified and standardized (Administrators' Order No. A-71).

Oils, Paints, Varnishes.—The use of tung, perilla and Oiticica oil has been restricted to such essential purposes as the manufacture of outside coatings and linings for cans to contain foods for human consumption (Administrators' Order No. A-75). The range of colours in paints and varnishes in general are limited. (Administrators' Order No. A-41).

Sugar.—Extra rations of sugar are to be allowed to workers in lumber camps (Administrators' Order No. A-35), isolated contractors camps (No. A-52), and salt water fishermen and seamen on merchant vessels No. A-53), makers of condensed milk are exempt from limitations on the industrial use of sugar, but industrial users of condensed milk must count its sugar content as part of their sugar quota, (No. 112). The industrial use of sugar for export to Britain and the British Empire, are exempt from the rationing order (No. 113), but the prohibition of icing and frosting imposed in February and later rescinded pending investigation has been reimposed. "Sugar preparations" covered by this prohibition do not include jams, jellies and chocolate, nor honey, glucose, maple or other products which do not contain cane or beet sugar.

Rubber.—Because of the rubber shortage "no rubber will be processed in future for retail purposes." The use of existing stocks and their distribution for sale at retail has therefore been limited to a narrow range of types and widths of elastic. No purchases may be made except for immediate use and a maximum limit of four yards is set on any purchase.

Woollen Cloth.—Shortage of woollen cloth and unevenness of the supply both of Canadian and imported material led the Wartime Prices and Trade Board to set up a special directorate in the Wool Administration to deal with the problems involved. In addition a separate corporation, the Canadian Wool Board Limited, has been created to take over the entire Canadian wool clip for the duration of the war and for one growing year thereafter, to encourage domestic wool

production by guaranteeing a stable market and fixed prices. Existing registered wool warehouses operated in 1941 will be used for grading and warehousing in co-operation with the Dominion Department of Agriculture under licence by Canadian Wool Board Limited. Wool growers' associations, local dealers, agents, collectors and field men will serve as primary receivers, also under licence. "The grower of wool will receive a proper price for his clip each season with fair and uniform charges for collecting, handling, grading and transportation. The new organization has been empowered to set prices for all grades and qualities of fleece and pulled wool and to determine the amount of charges or commission rates levied by any dealer or agent for services rendered.

Fleece wools will be graded according to recognized government wool grading standards and under supervision of the licensed and registered warehouses. Pulled wool, Canadian or imported, will be classified according to recognized standards and made available through established trade channels."

Clothing.—A very important group of Administrators' orders issued this month dealing with a wide range of clothing are also concerned with the conservation of wool and and other materials. They are designed not only to keep manufacturers' costs within the limits required to maintain the retail price ceiling (without, however, impairing serviceability to the consumer), but also to provide for the use of the limited supply of material, plant capacity and labour available in such a way that these will go as far as possible in meeting civilian needs.

They provide in minute detail for the elimination of a great number of conventional but wasteful, or, in some cases, useful but dispensible, features of clothing, and for limitations on the dimensions of garments and on the styles which are to be permitted. In general styles which require "cloth-on-cloth," which have no special function in relation to wearability, or which are needlessly extravagant in the use of material, are no longer allowed. Some uses of material have been prohibited even though this means some loss of wearability or warmth to consumers, because they require a disproportionate quantity of critical materials, particularly woollen goods. The restrictions and eliminations imposed very closely parallel those adopted in the United States and have many points in common with the basic characteristics of the British "Utility Clothing." Among these restrictions and eliminations are the following:

Men's suits are to be without sleeve buttons, double breasted sack coats and vests, trouser cuffs and pleats, and a second pair of trousers and pleated or by-swing backs. Pockets are limited in number and design. Limits are set to the length of coats, overcoats and trousers and to the width of trouser legs and waist bands. The maximum length and sweep of women's skirts and coats is specified and fashions needlessly extravagant in the use of material, such as three-piece suits, matching hats, voluminous sleeves and patch pockets, are prohibited. Ruffles are forbidden on lingerie and night dresses. Expenditure for American styling is limited, along with expenditures on advertising. Woollen interlinings for men's and women's top coats and children's snow suits may no longer be supplied, and strict limitations are placed on sport wear and woollen work clothing. Men's and boys' rubberized clothing is restricted as to length and style.

Commercial Motor Transport.—With a view to conserving rubber, oil and automotive equipment and ensuring the maintenance of essential supplies the Administrator of services has been given, in collaboration with the Wartime Industries Control Board, broad powers over all forms of commercial motor transportation. He has power to regulate, control, restrict or prohibit the use and operation of any commercial automotive vehicle and to prescribe rates, routes, or loads and control empty or "dead" running time. He may require any person owning or controlling commercial automotive equipment to pool his equipment and facilities with other persons, to accept and carry specified loads or otherwise operate his equipment as the Administrator may direct. (Board Order 105). Pursuant to this order two Administrators' Orders have been made. The first forbids retailers to make more than one regular delivery a day by motor vehicle over a given route or any special delivery, without prior written permission from the Administrator. Exceptions to this rule will include deliveries of daily newspapers, coal, coke, fuel oil, wood fuel, drugs or medicine delivered on prescription, and deliveries to hospitals, railways, steamships and for or to the Departments of National Defence and Munitions and Supply. (Administrator's Order No. A-57). The second forbids the use as taxi cabs or "drive yourself" cars of motor vehicles not so used in 1941 without written permission. (Administrators' Order No. A-58). Subsequently taxi cab operators have been warned against allowing their cabs to be used for non-essential purposes such as sightseeing which are prohibited to bus operators by order of the Transit Controller of the Department of Munitions and Supply.

Bread.—New restrictions on baking and delivering bread have been introduced. The number of varieties of bread and rolls which may be made each day has been limited, and

certain processes and practices are prohibited. Labels on loaves are to give the weight and retail price. Any delivery system which does not yield an average of $150 sales a week on each route ($125 in rural districts) must be discontinued. (Administrators' Order No. A-59).

In many other trades economies and methods of conservation are under active consideration and in some the problem of salvaging used goods and materials or waste as a means of eking out scanty supplies has become urgent. Another corporation, Wartime Salvage Limited, has therefore been created (P.C. 2530) to operate under the direction of the Wartime Prices and Trade Board and in co-operation with Governmental Departments and agencies thereof in "acquiring and disposing of waste or used matter of all kinds," especially waste paper.

Control of Exports

To make sure that adequate supplies are available for the home market additions have been made at the instance of the Wartime Prices and Trade Board to the list of those subject to export control, for example, maple products, animal wax, candles, and feathers and down.

Import Problems

War conditions will make necessary a certain amount of government purchasing of imports from abroad to safeguard civilian supplies and shipping conditions and dislocation of normal sources of supply may require special action to ensure continuity of imports, especially in cases involving large individual amounts and with attendant risks that private business might not be able to assume. Though it is not intended to develop an import monopoly the Commodity Prices Stabilization Corporation has the power to buy and sell imported commodities and this power has first been applied in purchasing from the Australian Government Canada's entire requirements of currants and raisins. In recent years Canada has normally imported these goods almost entirely from Australia at prices which other suppliers are not prepared to meet.

The Corporation will distribute its imports through normal channels of trade by way of allocation of supplies at prices which are appropriate in relation to retail ceiling prices. Private importers are still at liberty to make additional imports if they so desire, but in view of the special arrangements for an adequate supply, such additional imports will not be eligible for import subsidy. In such operations the Commodity Prices Stabilization Corporation will use established channels of trade and existing facilities where possible.

Importers are particularly requested to inform the Corporation of opportunities to purchase essential supplies which they, for any reason, cannot buy or which cannot be obtained through the regular channels of trade so that the Corporation may take action to assure the country of adequate supplies.

The range of imports on which subsidies are payable has been increased by the addition of earthenware tile, earthenware and other sanitary ware, various leather products, florists, and nursery stock, bicycles and carpets and rugs. Lima beans and certain fabrics have been declared ineligible for subsidy.

For the purposes of its operation, both with respect to import subsidies and import buying, the Corporation must exercise a general supervision over imports and import prices. The policy of import subsidies itself requires the maintenance of day-to-day contacts with foreign markets and supervisory action to ensure that importers buy in the cheapest markets so that subsidies may be kept at a minimum. The facilities and personnel of Harrisons & Crosfield (Canada) Limited, Canadian affiliate of the well-known British importing and exporting firm, with offices and connections throughout the world have therefore been made available to the Commodity Prices Stabilization Corporation for the purpose of supervising its import department. They will negotiate purchases abroad for the Corporation and administrators and will advise the Board and the Corporation in regard to import transactions generally and import prices.

A difficult situation in respect of imports of rice has been met by the appointment of a committee to control all imports of uncleaned or paddy rice into Canada, standardize packaging and supervise its distribution. In future only such uncleaned or paddy rice will be eligible for import subsidy and none will be paid on rice for malting purposes.

Domestic Subsidies

During the month action has been taken to meet a critical situation over the "squeeze" between higher costs and the retail ceiling in the case of a number of groceries and of last season's domestic pack of canned fruits and vegetables.

Groceries.—In order that supplies may be maintained it was essential to ensure that replacement costs of grocery wholesalers and retailers shall be held to a level which is, on the whole, reasonable in relation to their ceiling prices. Board Order 116 therefore sets for a designated list of groceries, manufacturers' maximum prices at the highest prices charged during June, 1941, instead of the standard basic period, September 15 to October 11, 1941. To compensate manufacturers for this enforced reduction in their lawful selling prices, a subsidy will be paid by the Commodity Prices Stabilization Corporation Limited. All subsidies are to be based essen-

tially on need. As it is not practical to investigate in advance the needs of each individual manufacturer the subsidy will represent the difference between the former maximum price and the new maximum price of each manufacturer for each product, but reduced by the amount by which the manufacturer's profits from his entire business, after taxes, are greater than his "standard profits" for the purposes of the Excess Profits Tax Act, after taxes paid in the standard period are deducted in accordance with a formula described in a special statement. Because of their profits position, therefore, many manufacturers will not require or be entitled to the subsidy. This arrangement does not cover export sales nor sales to Department of Munitions and Supply.

Canned Fruits and Vegetables.—Many retailers' ceiling prices for canned fruits and vegetables were based on the actual costs of stocks purchased in the summer of 1941 or earlier, while canners' selling prices advanced subsequent to these purchases and were established as ceiling prices. To establish replacement costs to retailers on a basis appropriate to their ceiling prices Administrator's Order No. A-44 requires that the maximum at which any canner may sell his stock of some 35 kinds of domestic canned fruits and vegetables is to be the "lowest f.o.b. cannery price actually charged by him prior to October 12, 1941 to any purchaser for the same kind, brand, grade and quality of product of the 1941 pack in the same size and kind of container." If wholesalers or retailers find their costs cut below the level on which they based their maximum selling prices they must reduce these proportionately. The owners of the remaining stocks of 1941 canned goods will be compensated by the Commodity Prices Stabilization Corporation. Wholesalers will receive the difference between their original cost and the new lower canners' prices; canners will receive 80 per cent of the difference between their highest price in the basic period and the lower price at which they must now sell. This action is not a precedent for the 1942 pack.

Meat Prices.—Serious difficulties have arisen in holding the retail price ceiling on yet another food product, meat. In addition to earlier provision for seasonal changes in quality it has now been arranged that each retail store shall be entitled to buy cattle and hog meat and meat products at a cost not greater than the highest price paid by that store to the same packer or wholesaler during the basic period. (Board Order No. 109). This is a departure from the general rule under the Maximum Prices Regulations, according to which the *sellers'* highest price to any customer during the basic period sets the highest price he may charge all his customers (subject to normal differentials). Further action in the future is likely as, even with this adjustment, retailers are faced with higher replacement costs and operating margins are narrow and the scope for economies limited. Retail price increases or removal of the ceiling have been rejected as a solution since both these steps would mean a serious breach of the retail price ceiling.

Onions and Potatoes.—The prices of fresh fruits and vegetables, exempt from the ceiling last December (Board Order No. 66), have been kept under careful scrutiny. Onions sold by growers, shippers, wholesalers and retailers had already been put back under the ceiling and no increase in price is to be allowed for storage onions. The ceiling on potatoes has now also been restored, though with a new basic period, February 2-7, 1942. A subsequent order set another basic period (March 1-10) for certain western potatoes (Administrator's Order No. A-63) and still later a 5-cent increase a month for three months in maximum prices has been allowed (Board Order No. 118) to cover normal seasonal losses for waste in storage by sprouting, rotting and shrinkage.

Other Ceilings

Price ceilings have been confirmed or clarified for a number of other products.

Women's and children's fur trimmed cloth coats remain under the ceiling subject only to a permitted increase in price equal to any increase in the cost of the fur, since fur and fur goods are exempt from the ceiling (Administrator's Order No. A-34). Every fur trimmed coat retailing at $25 or more is to have a ticket attached showing the value of the fur.

Newspapers, Magazines, etc.—Administrators' Order No. A-67 makes it clear that no one is permitted to sell or purchase in Canada any newspaper, magazine or periodical at a price higher than that charged or paid for the same publication during the basic period, subject to the exemptions of imported books and printed matter specified in an earlier order (Board Order No. 103). Price increases recently announced by certain publications printed in the United States will not apply to sales of these publications in Canada.

The Maximum Prices Regulations have applied since December 1, 1941, and will continue to apply to all purchases and sales in Canada of newspapers, magazines and periodicals. The ceiling cannot apply to subscriptions to foreign publications where the subscriber sends in his subscription direct to the publisher without the intervention, solicitation or aid of any intermediary in Canada.

Maple Products though exempt from the ceiling when sold by farmers to dealers and processors are subject to the ceiling when

sold at retail. As a seasonal product they cannot be sold at a price higher than the price charged a year ago.

Similarly *snacks and meals served at summer resorts* must be priced in accordance with seasonal rates effective last year if no sales were made in the basic period.

Lumber.—Two orders clarify the problems of lumber dealers' commissions and prompt payment discounts. (No. A-26 and A-45).

Exemptions.—Three new commodities have been exempted from the price ceiling: Hay and straw; stamps handled by collectors and dealers; and liquor, since it is sold by provincial liquor control boards.

Adjustments.—Besides adjustments to correct several individual ceiling anomalies special circumstances have required some more general ceiling adjustments. Manufacturers or bottlers of *soft drinks* who prior to the basic period had not increased their selling prices by the amount of the special excise tax imposed by the last budget are allowed to increase their selling prices by such part of the tax as they have not already passed on to the consumer, since this tax was intended to be a tax on consumers.

Canadian White Pine.—Increased costs of material and labour have made it necessary to adjust the prices for *Canadian White Pine* lumber (Administrators' Order No. A-72) to allow to manufacturers and wholesalers a maximum increase in price of $2 per thousand feet, above the prices they charged under the Canadian White Pine Bureau price list of February 3, 1941.

Moving Picture Houses.—No moving picture house may increase admission prices without special permission; nor reduce the number of low priced seats to increase the number of high priced seats; nor change its run category; nor inaugurate a service charge in connection with special services.

Maximum Prices Orders

A number of maximum price orders have been issued.

Used or second-hand bags and bagging.—A schedule of maximum prices has been issued for *used or second-hand bags and bagging.* On types not listed in the schedule they may not be sold or purchased until a maximum price has been set by the Administrator. (Administrators' Order No. A-51). In order to promote the manufacture of products which contain significant quantities of vitamins "D" and "G" (riboflavin) and are used in livestock and poultry feeds (Administrators' Order No. A-76) sets maximum wholesale carlot prices on segregated *fish tissues* which would otherwise be incorporated into fish meal. Maximum retail prices are to bear their normal relationship to these maximum wholesale prices. The maximum price of *beeswax* has been set at 48 cents per pound f.o.b. buyers' warehouse (Administrators' Order No. A-56), and maximum prices have been set on dressed and raw horse-hair. (Administrators' Orders Nos. A-79 and A-77), and a list of maximum prices on *edible molasses* issued (Administrators' Order No. A-55).

Leather gloves and clothing.—To implement the agreement described last month (p. 290) as to the distribution of higher costs in the manufacture of *leather gloves and clothing* two orders have been issued confirming the retail ceiling as specified in the Maximum Prices Regulations, limiting each manufacturer to a price not more than 4 per cent above his highest price between January 1 and March 31, 1941 (Administrators' Order No. A-25), and setting a schedule of maximum prices on a wide variety of types, grades and qualities of garment, glove and cap leathers, subject to the maintenance of normal differentials in respect of quantity sales and terms and conditions of sale. (Administrators' Order No. A-62). In one county, Megantic, an official price list for firewood has been issued based on sales of a standard cord of 128 cubic feet.

Enforcement of Orders

Among enforcement problems the great majority still concern rentals and violations of the sugar rationing order. There have been a number of prosecutions and convictions for infractions. A new hoarding problem developed when the order respecting economies, simplification and conservation of material in the production of men's clothing was announced. A "run" on accustomed conventional models developed and the effective date of the order was therefore put forward to March 25 from May 1 for ready made clothing and August 1 for made-to-measure garments. A campaign to discourage hoarding in every form is under way, as witness the chairman's attack on excessive public spending. (Speech by Donald Gordon before the Toronto Canadian Club, March 30, 1942). Infractions of the regulations governing sales of tires and gasoline has presented a serious problem to the Wartime Prices and Trade Board Enforcement Administration which is responsible for compliance with them. The first conviction under the Maximum Prices Regulations led to the imposition of a $100 fine on a Vancouver restaurant.

Sub-regional and Regional Offices of Board

Local organization of Wartime Prices and Trade Board activities is being pushed forward rapidly. In all there are now 55 sub-

regional offices besides the thirteen original regional offices. Women's Regional Advisory Committees, sub-committees and corresponding and liaison officers are being appointed throughout the Dominion.

March 31 was the last day on which companies and individuals who are required to be licensed under the Wartime Prices and Trade Board Order No. 78 could lawfully carry on their business without a licence.

LABOUR LEGISLATION IN BRITISH COLUMBIA IN 1942

THE British Columbia Legislature, which met on December 4, 1941, and closed on February 12, 1942, passed an Act to enable measures to be taken to facilitate the return to employment of persons who have served in the armed forces and amended laws relating to apprenticeship, trade schools, the closing of shops, payment of wages in cash or by cheque, and old age pensions.

Post-War Rehabilitation

The Post-War Rehabilitation Act provides for the establishment of a Post-War Rehabilitation Council of not more than 12 members which is to make an estimate of the number of persons who, at the end of the war, will be released from the forces and thrown out of employment in war industries, classifying according to occupation those who already have training that fits them for civilian employment and formulating plans for training those who may require it. To create opportunities for the employment of such persons in gainful occupations, the Council is to make a survey of the resources and industries of the province to ascertain what war industries may be converted to peace time use or new industries established and what lands are suitable for settlement. The Council is also to co-operate with the Dominion Government, municipal councils, agriculturalists and organizations of employers and employees in formulating projects for the purposes of the Act and to make such other inquiries as the Lieutenant-Governor in Council may direct.

Apprenticeship and Trade Schools

An amendment in the Apprenticeship Act lowers the minimum age for entry into apprenticeship and employment in a designated trade from 16 to 15 years, thus bringing it into line with the school-leaving age. The Act applies to the building trades, automobile maintenance, sign and pictorial painting, ship and boat building (including alterations and repairs), servicing and repair of current-consuming electrical appliances, jewellery manufacture and repair, machinist, lithographing, metal trades, aviation mechanic (including construction, maintenance and repair of aircraft), moulder, druggist.

By an amendment in the Trade Schools Regulation Act the definition of "trade" was altered to mean the skill and knowledge requisite for or intended for use in "any business, trade, occupation, calling or vocation" instead of in "an industrial or commercial occupation, calling or vocation." The following are added to the trades and occupations specifically included in the definition: Accountancy, commercial and industrial art, advertising, business management, general and specialized manufacturing, mechanical dentistry, laboratory attendants and technicians, pharmacy, photography, personal service, chiropody, manufacture, repair and operation of radio and electrical equipment, general and specialized therapeutics, salesmanship, journalism, story-writing, home and nursery service. Any business or trade and, as formerly, any occupation, calling or vocation, may be designated as a trade by the Lieutenant-Governor in Council.

The definition of "trade-school" is amended to exclude schools or courses conducted by any department of the Government of Canada or of British Columbia, or by the Law Society of British Columbia, or any school or course which is maintained under any other Act of the Legislature or which is exempted by the Lieutenant-Governor in Council.

Regulations issued under the Act may now fix minimum as well as maximum fees for courses of instruction and the conditions upon which enrolment and tuition fees may be collected, may prescribe the means of instruction, the number and qualifications of the teachers, the accommodation, equipment, books and materials necessary for any trade school, and whether any price may be charged the student, in addition to the tuition fee, for the purchase or use of such articles and the maximum or minimum prices to be charged. The regulations may also govern the selling and advertising of any course of instruction and may prohibit such as is not in conformity with the regulations, may prescribe the form of contract to be used and the conditions upon which representatives, agents and salesmen may be employed and registered.

Early Closing of Shops

A clause added to the Shops Regulation Act provides that municipal early closing by-laws may limit, for any class or classes of shops, the time that a customer who was in the shop before closing time may remain there after the closing hour.

Payment of Wages in Cash or by Cheque

The sections of the Truck Act which require wages to be paid in cash or by cheque to workmen employed in undertakings in a city or within three miles of a city were amended to extend them also to undertakings in villages and municipalities.

Old Age Pensions

An amendment in the Old-Age Pension Act, which will come into force on proclamation, transfers its administration from the Workmen's Compensation Board to the Department of the Provincial Secretary.

War Veterans Exempt from Poll Tax

Exemption from the Poll Tax Act has been granted to persons disabled by service overseas in His Majesty's forces in the present war as well as to veterans of the war of 1914-19.

Housing

An amendment in the Municipal Act, which is retroactive to January 1, 1941, enables the Lieutenant-Governor in Council to confer on the council of any municipality, power to enter into contracts with Wartime Housing, Ltd., a Dominion corporation, for any of the purposes for which that company is incorporated.

Bills Not Passed

Bills presented to the Legislature but not passed included amendments in the Acts relating to collective bargaining, hours of work, shops and mechanics' liens, and a Bill to regulate company towns.

A Bill to amend the Industrial Conciliation and Arbitration Act would have provided that in any case where employees had not selected their bargaining organization by a majority vote, the Minister of Labour should, on receipt of an application from two officers of a trade union accompanied by a statutory declaration that they had been requested by employees to make the application, conduct a secret ballot of the employees affected within seven days in order to determine the bargaining agency. Any change of bargaining organization would have had to be made by secret ballot of which at least 24 hours' written notice had been given all available employees affected. The Bill also provided that organizations might be represented by any person or persons duly appointed by the organization for the purpose.

Other bills would have required that female employees under the Hours of Work Act should be given a rest period of at least 15 minutes in any continuous work-period of three hours or more, that employers covered by the Shops Regulation Act should provide reasonable heating to the satisfaction of the inspector during such parts of the year as the inspector deemed necessary, and that a claim for wages under the Mechanics' Lien Act, unless filed, should cease to exist 60 days after completion of the last work for which the lien is claimed instead of 31 days as at present.

A Bill concerning industrial settlements would have provided that where, by reason of the presence or operations of an industrial undertaking there was a concentration outside a municipality of 50 or more persons in an area of a square mile or less, such area should be termed a public settlement, its roads and streets public thoroughfares and the employees of the undertaking living on the property tenants of the employer with the usual rights and privileges of tenants.

Resolutions

On January 22, 1942, a resolution was passed to instruct the Standing Committee on Labour to examine into the jurisdictional position of Provincial Statutes affecting labour in relation to Dominion Orders in Council, with a view to recommending means of removing any conflict and clarifying the situation as to interpretation and jurisdiction. On January 30 the Legislature adopted a motion to instruct the committee to meet representatives of labour organizations who desire to present a brief on labour legislation and to report these representations to the House.

The report of the Standing Committee, presented on February 11, stated that the Minister of Labour had pointed out that the resolution implied that there is conflict in jurisdiction as between the Dominion and the Province. This, he had stated, is not correct since in time of war the Dominion has power to occupy any legislative field deemed necessary in the national interest and the Dominion Orders in Council on labour matters were passed under the authority of the War Measures Act. The Minister explained what had been done to ascertain and set out the respective fields of responsibility with a view to avoiding confusion.

The committee reported that representatives of organized labour who appeared before it urged the repeal of section 5 of the Industrial Conciliation and Arbitration Act, chiefly because they considered that this section gives an opportunity to delay the commencement of negotiations. Section 5 declares it lawful for employees to bargain collectively with their employers and to conduct such bargaining through representatives elected by a majority vote of the employees affected or, where a majority of the employees of any employer were organized in a trade union on December 7, 1938, when the Act was passed, through the officers of the union. The committee agreed to refer this section to the Minister of Labour and to recommend it to the favourable consideration of the Legislature.

Two other resolutions of the committee were: That the committee recommend that the provincial Department of Labour arrange to receive representations from organized labour and others interested, so that matters of interest to labour may be referred to the committee early in the session; and that any information on proposed changes affecting the status of labour between sessions of the Legislature be forwarded by the Department of Labour to all members of the committee.

WAR EMERGENCY TRAINING PROGRAM

AT March 31, 1942, the total number reported in training by the 110 schools in which War Emergency Training was in progress was 15,076. Of this total 5,148 were in the industrial pre-employment classes, 2,049 were receiving instruction in the part-time classes provided by the program for employees selected by industry. There were 5,145 trainees in the R.C.A.F. pre-enlistment classes at the end of March and the number of Navy and Army tradesmen and mechanics in training was 2,734.

At March 1st the numbers in the classes were as follows: industrial pre-employment 5,286, part-time classes for employed persons 1,449, R.C.A.F. pre-enlistment classes 5,175 and Navy and Army classes 3,068.

New trainees entering the pre-employment classes during March numbered 3,203, in the part-time classes 1,071 new trainees were enrolled, 1,380 young men entered the R.C.A.F. pre-enlistment classes during the month and 979 enlisted men were referred to the classes by the Navy and Army in March.

From the pre-employment classes 2,338 graduates were placed in employment in war industries in March and 1,167 men from the R.C.A.F. classes completed their training and were enlisted in the Air Force. Enlistments in various units of the Armed Forces from industrial classes numbered 31.

Explanation of Tables

Table 1 is a summary by provinces which shows the numbers in the various types of classes from April 1, 1941 to March 31, 1942, the numbers in the classes at March 1, 1942, the numbers enrolled during March and the numbers in the classes at the end of March. Placements and enlistments both for March and for the year, April 1, 1941, to March 31, 1942, are enumerated by provinces as are the withdrawals from the classes.

In table 2 the numbers in training at the end of March are shown by provinces and by individual schools under the main trade categories in which training was being given in the pre-employment classes. The numbers who were placed, enlisted or who withdrew from the pre-employment and R.C.A.F. classes are also shown for each school.

An age classification of new trainees enrolled in pre-employment classes since April 1, 1941, and in the month of March 1942 is provided in Table 3. Veterans of the 1914-18 war and discharged soldiers of the present war, who are given preference in the selection of trainees, are included in Table 3, but a separate age classification for these men is also provided in Table 4.

Summary of Training from April 1, 1941, to March 31, 1942

From April 1, 1941, to March 31, 1942 (fiscal year 1941-42), the total number provided training through the War Emergency Training Program was 73,726. Of these 36,530 were in pre-employment industrial classes, 3,924 were in the part-time classes for employed persons, 14,874 were in the pre-enlistment R.C.A.F. classes and 18,398 were in the Navy and Army classes. Graduates from the industrial classes who were placed in war industry numbered 22, 931 and 116 from the R.C.A.F. classes found employment in the aircraft industry. From the R.C.A.F. classes 7,843 were enlisted in the Air Force and 579 from the industrial classes joined various units of the Armed Forces. The numbers in training, graduates placed and enlisted by provinces during the fiscal year 1941-42 were as follows:—

WARTIME FARM LABOUR PROGRAM IN ONTARIO

Review of Measures Taken in 1941 to Meet Shortage of Farm Labour in Ontario—Plans for 1942

IN the Spring of 1940 the Farm Training Branch of the Dominion-Provincial Youth Training Program, foreseeing the coming shortage in farm labour due to enlistment, construction, war industries, need for increased food production and general stimulation of business, began to work on a method of meeting the critical farm situation.

The Ontario Department of Education was approached to arrange for special regulations which would release Secondary School students early for farm work. It was, however, too late in the season to make these arrangements effective and students were not released until examinations were over. Even at that, between 2,000 and 3,000 young men were placed on farms in the two months of July and August.

Benefiting from the experience gained in the Spring of 1940 plans were formulated in October and November 1940 to meet the 1941 situation. Conferences were held with groups of farmers in various parts of the province. A rounded out plan was first presented to a representative group of Waterloo farmers at Kitchener in October 1940 and later to other farm groups. The plan was thoroughly discussed, criticized, modified and suggestions made for its improvement. It was finally approved and prepared for submission to the Ontario Government in November 1940.

Features of Plan

The method of meeting the situation was based on the recognition of food production as a necessary war industry. In public addresses from time to time, this was recognized by the Premier of Ontario and members of the Ontario Cabinet. By this recognition, it was possible to make a wide appeal for registration of farm workers on the basis of patriotism and a desire to help in the prosecution of the war.

The importance of the problem was recognized by the Ontario Government and an Inter-departmental Committee on Farm Labour Service was appointed consisting of the Minister of Labour, Hon. N. O. Hipel as Chairman, The Minister of Education, Hon. Dr. Duncan McArthur, the Minister of Agriculture, Hon. P. M. Dewan, and the three Deputy Ministers, J. F. Marsh, Dr. G. F. Rogers and W. R. Reek. A. Maclaren was appointed as Director of the plan.

The Dominion Department of Labour was then approached for their co-operation in financing and promoting the plan. This co-operation was accorded and the work for 1941-42 was carried out under a Dominion-Provincial Inter-departmental Committee agreement.

The co-operation of all the Churches, the Y.M.C.A., Y.W.C.A., other branches and departments of the Provincial Government, Boards of Education, Teachers and others was then secured. All these groups co-operated and helped to make the plan a success in 1941-42.

Farm Labour Service Force

The Inter-departmental Committee early in 1941, after considering fifteen or twenty names, organized its Farm Labour Service under the name of the Ontario Farm Service Force. This name parallels the name of Canada's Overseas Military Forces viz. Canadian Active Service Force. By the adoption of this name the movement capitalized on the patriotic war sentiment which was manifest throughout the Province.

The Farm Service Force has now organized those who registered with it into six or seven Brigades according to the class of registrant. Anyone over 12 years of age who works on the farm or in the production of food is eligible for registration. The Force registers farmers, farmers' wives, sons, daughters and hired men as well as village, town and city people who volunteer to help the farmer. All boys under 15 and girls under 16 must work on their own home farm or on some other farm selected by their parents and under their close supervision. Others over these ages may work at home, find their own job or be placed by the Ontario Farm Service Force. All registrants are known as Farm Service Volunteers. The Brigades are as follows:—

(1) *The Farm Cadet Brigade* enrolls all young men, 15 years old and up to military age, and all those over that age who have been rejected for any of the Services and who are prepared to work on the farm in the production of food. Their chief work is seasonal work on mixed and dairy farms.

(2) *The Farmerette Brigade* enrolls all young women 16 years old and up, in school, normal school, college, university, or other educational institutions and women teachers in these institutions. Their specialty is fruit, vegetable and truck farming.

(3) *The Women's Land Brigade* enrolls all women who are not in educational institutions

and volunteer for Farm Service and emphasizes year round work on general, live stock, poultry and dairy farms.

(4) *The Boys of the Old Brigade* enrolls middle aged and older men, many of them retired farmers or farm hands for year round or seasonal work on general and dairy farms.

(5) *The Holiday Service Brigade* enrolls three classes of Farm Service Volunteers: (*a*) Those who give their summer holidays—say one to three or four weeks to help relatives, friends or other farmers particularly in haying, harvest, threshing, silo filling, potato or other harvesting operations; (*b*) those who, while working at some other occupation, give one day a week to nearby farmers in harvesting operations or (*c*) those who in small country towns close their stores and organize holidays (one, two or three days a week) and go out and help in harvest operations.

(6) *The Children's Brigade* enrolls all under 16 years of age who on their own farms or on nearby farms participate in farm work including picking berries, hoeing, weeding, caring for gardens, etc.

(7) *The Farm Girls' Brigade* enrolls all farm young women up to 26 years of age not in school who undertake to help in various ways with the farm operations. Another will enroll during 1942-43 anyone not resident on the farm who undertakes to plan, plant, care for and harvest a vegetable garden at their own home or on an allotment. This Brigade will be called the Home Garden Brigade.

The Land Army

With this type of organization it can be seen that Ontario has organized a Land Army. According to the 1931 census the number of men, women, and children that was needed to care for the crops in Ontario was constituted as follows: Family workers—281,364; Permanent workers—25,276; Temporary workers —123,144 or a total Army of 429,784.

This army of 429,784, having been depleted by enlistment in Army, Navy, Air Force, and Home Defence Forces, by engagement in construction and war industry, etc, the task of the Ontario Farm Service Force is to recruit reinforcements and replacements. For 1941-42 the Force set for itself an objective of 10,000 placements for farm service and in the twelve months it has recorded placements of 23,000.

The work was organized with a Field Force of Placement Officers, one in every three counties of the Province. The work of these Officers was: (1) to secure applications from farmers for help; (2) to investigate the home and the character of the farmers applying for help; (3) to visit Secondary Schools, Employment Offices, County Departments of Agriculture, and address public meetings to enroll as many volunteers for farm work as they could get; (4) Place these volunteers in selected farm homes where they would have the best chance to make good; (5) to keep in touch with these placements in order to see that no young person was exploited; (6) to adjust any difficulties that might arise with regard to hours, conditions, wages, etc.

Each year in the late winter before placement began a survey has been made of the need for farm help. In 1940, the survey consisted of obtaining reports re: the situation from every Employment Office and County Department of Agriculture Representative in the Province. In 1941, 5,000 Survey forms were sent out, one to each Rural School Section in the Province. About 1,500 forms were returned, which indicated that the situation was very serious. In 1942 a thorough organization of every County is being undertaken with volunteer canvassers in every polling subdivision to make a farm-to-farm canvass to find out all the labour resources, machines, men, co-operative community organization, and the actual shortage of help.

The help secured for Ontario Farmers in 1941-42 when analysed shows the following distribution:

Secondary School Students placed through Schools, Departments of Agriculture and O.F.S.F. Placement Officers:

Young men.....	6,454		
Young women.....	5,407		
Young men placed by field staff.....	1,900		
Day-by-day work....	350	14,111	
Placed through Employment Service of Canada Officers and in co-operation with O.F.S.F. Placement Officers:			
Experienced men.....	4,037		
Partly experienced men.....	1,667	5,704	
Placed by O.F.S.F. Officers Women's Land Brigade:			
Monthly placements	95		
Day-by-day Work.	1,440	1,535	
Farm Service Force Camps:			
10 Girls' Camps....	998		
1 Boys' Camp.....	120		
Private Camps....	123	1,241	
Army (men released part time from Active Service Force).....	450	450	23,041

The Holiday Service Brigade encouraged men and women to spend their holidays doing farm work. It has not been possible to keep a record of the number enrolled, but the number is in the hundreds.

The Army authorities were approached to grant leave to men in the Army to help in harvest operations. Certain concessions were made but since all men asking for agricultural leave had to give up Army pay, family allowances, hospitalization, insurance, etc., the number secured was very limited.

The day-by-day work was done by individuals who for one reason or another had to live at home but gathered at certain rendezvous on the outskirts of town or city where each morning they were picked up by the farmer and returned there in the evening.

There was considerable evidence that many recruits for farm work were secured without their being registered in any of the agencies co-operating, but due to the publicity campaign conducted by the Ontario Farm Service Force.

The experienced and partly experienced men were largely recruited through the Employment Service of Canada Offices and County Department of Agriculture Offices with which the Ontario Farm Service Force co-operated.

Plans for 1942

The Ontario Farm Service Force is starting its 1942 program with an objective of 40,000 placements between April 1, 1942, and March 31, 1943. It plans to carry on along the same lines as last year increasing the number of Secondary School Students, enlarging its Women's Land Brigade and experimenting in mobile units for harvesting, threshing and silo filling.

Entrance and Secondary School Students.—Regulations governing the granting of Departmental Certificates from Entrance to Honour Matriculation have been drawn up and sent out to Secondary School Principals and High School Entrance Boards.

These regulations will permit students to leave school (without losing their year's standing) after April 17 and in a few cases even as early as April 1 for two purposes viz. to enlist in Canadian Active Service Forces or to engage in farm work or its closely allied industries such as creamery, cheese factory, cannery and packing house. The conditions under which students may do either of these two things and still secure their year's standing and promotion are as follows: (*a*) They must be in regular attendance at school until the date released; (*b*) They shall score fifty per cent standing in all subjects required in term work and exams; (*c*) They shall enlist or engage in farming for a term of at least thirteen weeks and until voluntarily released by the farmer employer.

High School Entrance Boards may grant Entrance standing to students in Grade 8 on the recommendations of their principal when they fulfil similar conditions to the Secondary School Students as outlined above.

Course of Preliminary Training for Inexperienced Students.—An outline course including lectures on the theory of farming, practical work in school, shop, garden, visits to farms, stables, dairies, etc., practical demonstrations in use of implements, exercises for making students physically fit, etc., has been prepared and issued by the Department of Education and in many schools is meeting with considerable success. A special handbook for students has also been prepared for those who have never had any experience in farm work.

Some teachers have questioned the advisability of allowing students to leave school so early in the year because of the loss in education. On the other hand this plan may be a gain for education if there is taken into consideration the value of training in Democracy involved in the self-discipline of farm work, the understanding of urban-rural relationships secured, the responsibility of the individual to the community which is developed in rendering a fair day's work for a fair day's pay, the co-ordination of body, mind and spirit in serving the social purpose of food production, and the realization of the value of time, work and money.

The Organization of Camps in Fruit and Vegetable Areas.—In sections where farming is carried on intensively such as fruit, vegetable and truck gardening areas, the method of setting up Government financed camps to house young women has been found to be the best method of meeting the fruit and vegetable growers' labour problem.

Eleven of these camps were established in 1941. As many more will be established in 1942. These camps are set up to accommodate up to 60 young men or women. The discipline, recreation, feeding and housing arrangements are directed by the Young Men's Christian Association or the Young Women's Christian Association. The labour distribution is handled by O.F.S.F. Placement Officers and a Labour Secretary in each camp.

Workers are paid by the farmer at going wages in the district but not less than a minimum hourly wage agreed on at a growers' meeting before the opening of the camp.

At a preliminary meeting of growers in a district where it is believed that such a camp is needed the particular needs of the district are discussed, e.g., minimum wages, piece rates, conditions of work, etc. Every grower is then required to fill out a labour requirements survey. These surveys are charted and graphed. The placement officer and the local committee in charge then review the situation, decide on the opening date and the number of helpers required at the opening of the camp.

An unemployment insurance fund is established in each camp district to which each grower contributes 10 cents per worker per day used. This fund is drawn on to supplement the board of any worker who is unemployed because of scarcity of work and is operated as follows: Any worker who has four days' work or more in a week pays full board money ($4.50 a week for girls and $5 a week for boys) for every day less than four that he works, one-quarter of the board amount is drawn from the fund and paid to the Y.M.C.A. or Y.W.C.A. for board. In this way workers may be held in camp through the slack period, room and board free.

The camp of 60 workers is staffed with a director, cook and three assistants. A labour secretary is also placed in every camp, whose duty it is to distribute the labour as equitably as possible, see that every worker is steadily employed, adjust difficulties as they arise between worker and farmer, see that both worker and farmer are fairly treated.

A program of recreation and entertainment is planned by the director and the elected camp council of workers.

The grower telephones his requirements each evening and calls for his workers by car or truck each morning and returns them in the evening. Morning and evening meals are served in camp and workers make their own lunch in the morning to be taken with them and eaten on the farm where they are employed.

The camps run from April 1 to October 15 varying within these outside dates according to local needs.

These camps have been set up some under canvas, others in rented houses, remodelled barns, public schools, high schools, parish halls, fruit packing houses, fall fair grounds and buildings, etc.

A plentiful supply of good sanitary drinking water is necessary. A water system is installed, washing room facilities arranged for, jacket stoves and hot water tanks are part of the equipment. Wherever possible electric light and electricity for cooking purposes are installed.

Method of Placement

Farm workers are supplied to farmers in one or other of the following ways:

(1) By individual placement on farms where room and board is furnished in addition to cash wages.

(2) By placement in small groups from 2 to 20 where suitable living conditions are provided.

(3) By government organized camps of workers up to 60 in number as outlined above.

(4) Through day-by-day work.

(5) Through mobile units of men for haying, harvest, canning, etc.

All types of farming have been served through one or other of these methods including general farming, dairying, livestock, hog farming, poultry, flax, fruit, vegetable and truck farming. Many cannery workers have also been secured.

Uniforms, Badges, Awards

A system of recognition has been worked out and includes the following:

(1) A crest with the name "Farm Service Force" and motto "We Lend a Hand" a Union Jack and the Ontario Coat of Arms superimposed is presented to every registrant.

(2) The crest is accompanied with a card containing the code of the Ontario Farm Service Force.

(3) Uniforms for farm cadets, farmerettes, and women's land brigade are prescribed with shoulder, sleeve and hat badges. The wearing of these is not compulsory except in camp.

(4) The work uniform is blue overalls, white blouse and red bandanna for girls and blue shirts and straw hats for boys.

(5) Chevrons for six months or one season's work are presented to be worn on the sleeve of the dress uniform.

(6) Certificates of achievement will be presented at public gatherings in schools, etc., in the fall to those who have participated in the work.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Weekly Half-Holiday for Motor Vehicle Business in British Columbia—Lumbermen's Wages in New Brunswick—Quebec Minimum Wages—Teachers' Pensions in Alberta and British Columbia—Licensing of Hairdressers in Manitoba

BRITISH Columbia has exempted the businesses of motor vehicle dealers from the Weekly Half-holiday Act but has required them to observe Saturday as a half-holiday. Four Quebec minimum wage orders have been renewed and one amended to provide a 10 per cent increase in minimum wage rates for stationary enginemen. Several by-laws passed under the Alberta Teachers' Retirement Fund Act have been amended and a regulation governing voluntary increases of contributions to the Teachers' Pension Fund in British Columbia has been made. Manitoba has passed regulations for the licensing of hairdressers. A revised wage scale for three classes of forest workers has been issued by the New Brunswick Forest Operations Commission. The Regional War Labour Board for that province has approved the revised scale and set an upper limit on the wages of these workers.

Alberta Teachers' Retirement Fund Act

Amendments in certain by-laws passed under this Act (Labour Gazette, 1939, p. 1230; 1940, pp. 243, 446; 1941; pp. 138, 958) were gazetted March 14. By-law 4 is amended to place a pensioner who accepts a teaching appointment in an institution in the same position as a retired teacher who accepts re-employment in the schools. For such persons the pension will cease during the period of re-employment if it exceeds ten days in any one month, and the pension will be re-computed when the employment ends to allow for additional service and any additional contributions.

By amendments to by-laws 12 and 13 claims for a refund of contributions in the case of contributors who die before retiring or who reach retirement age before serving long enough to qualify for a pension must now be submitted within a time limit of one year. By-law 5 is amended to provide that claims for the amount of the monthly payment unpaid for the month in which the pensioner died must be made within six months of the date of death. In the case of deceased pensioners or contributors such claims could formerly be made only by the estate or the next-of-kin. They may now also be submitted by the widow or widower of the pensioner or contributor.

British Columbia Teachers' Pensions Act

The Commissioner of Teachers' Pensions has issued a regulation gazetted March 26 specifying the amount by which teachers may voluntarily increase their monthly contribution to the Teachers' Pension Fund in order to provide themselves with a larger retirement annuity. One or more dollars may be added to the monthly statutory contribution of 4 per cent of the teacher's salary, or the contributor may add an amount which together with the statutory contribution will yield a retirement annuity of $10 per month or any multiple of $10.

British Columbia Weekly Half-Holiday Act

Three types of motor vehicle dealers in the city of Victoria and the municipalities of Esquimalt, Oak Bay and Saanich have been declared exempt from the weekly half-holiday provisions of this Act but are required to observe a half-holiday on Saturday. The order gazetted March 26 covers shops engaged in repairing motor vehicles, those which sell motor car parts at wholesale and those which sell new motor vehicles. These shops must be closed to customers on Saturdays between 1 p.m. and 12 midnight and no employer may require or permit his employees to remain in such shops after 1.30 p.m. on that day. Repair shops and those engaged in selling new motor vehicles may retain one or more persons on the premises after 1.30 p.m. to perform services and repairs which are immediately necessary for the operation of a motor vehicle and which can ordinarily be performed within a half-hour. Cars may be accepted for storage or released from storage and used motor vehicles may be sold or demonstrated on Saturday afternoon.

Manitoba Hairdressers Act

Regulations relating to the licensing of hairdressers issued under this Act were gazetted March 21 and are to be in effect from April 1, 1942. They are applicable to Winnipeg, St. Boniface, St. Vital, Fort Garry, St. James, East and West Kildonan, Tuxedo, Transcona, and Brooklands.

Licences may be granted by the Department of Labour to master hairdressers, operators and improvers. The proprietor of every hairdressing establishment or one of the partners if it is run on a partnership basis must hold a master hairdresser's licence. All the employees must be licensed as operators or improvers. A master hairdresser who employs an unlicensed person as a hairdresser may have his licence revoked or suspended.

The Board of Examiners provided for in the Act may withold a licence unless it is

satisfied that the applicant is qualified as a hairdresser and, in the case of a master hairdresser, that the premises in which the business is to be carried on are suitable for the purpose. Each application must be accompanied by a medical certificate dated not more than two weeks prior to filing declaring the applicant to be free from any communicable or contagious disease. The licence fee for a master hairdresser is $5, for an operator, $2 and for an improver $1. All licences expire on April 30 of each year.

These regulations must be posted in a conspicuous place in each establishment. A licence may be revoked or suspended for failure to comply with them.

New Brunswick Forest Operations Commission Act

The Forest Operations Commission has raised the minimum wage rates for stream-drivers, boomers and sorters above those set a year ago (Labour Gazette, 1941, p. 435). The new order gazetted and effective April 1, 1942, increases the average piece-work rate for stream-drivers from $3.25 to $3.50 a day with board. Wages paid to cooks, foremen, bookkeepers and clerks are not to be included in computation of the average rate, nor are these groups covered by the order.

Hourly minimum rates for boomers and sorters are raised from 32½ cents to 35 cents without board; but the employer is still permitted to deduct from each worker's wages a maximum of 50 cents a day if he supplies board.

Payment of these rates is subject to the condition that no cost-of-living bonus shall be payable to such workmen for the balance of 1942. Requirements as to the keeping of records, the audit of payrolls and investigations by the Fair Wage Officer remain unchanged.

The Regional War Labour Board for New Brunswick has approved the revised scale of minimum wages and set an upper limit on wages for forest operators. Employers may not pay more than $3.75 a day with board to stream-drivers, nor more than 37½ cents an hour without board to boomers and sorters unless their highest rates for similar work in 1941 exceeded these amounts. In that event they may pay the 1941 rates.

Quebec Minimum Wage Act

A correction gazetted March 21 in the English version of article 2 of Order 5 (revised) concerning the silk tetxile industry (Labour Gazette, 1938, p. 985) makes the English and French versions agree in declaring the order not applicable to establishments which manufacture only tissues or fabrics of not more than twelve inches in width.

An amendment in Order 6 (Labour Gazette, 1938, p. 624) gazetted March 28 has increased by 10 per cent the minimum rates for stationary enginemen in the city and district of Montreal and in the municipalities within a five-mile radius of the Island of Montreal.

By notices gazetted March 28, Orders 5 and 6 have both been renewed for one year dating from April 1 and April 15 respectively and Order 15 concerning the packing and grading of wastepaper (Labour Gazette, 1938, p. 1236) has been extended to April 8, 1943. An order gazetted April 4 renews until April 1, 1943 Order 4 covering industries to which special orders do not apply. (Labour Gazette, 1938, p. 512).

Labour Laws Relaxed in U.S.A. to meet Emergency

In the United States labour laws applying to women's hours of work in manufacturing industries have been relaxed in many states. There are 21 states having laws or orders that provide a maximum of 48 hours a week (or less) for manufacturing industries; 12 states that prohibit night work for women during certain hours; and 20 states that provide 1 day rest in 7 (in addition all but 4 other states have no-Sunday-work laws).

General acts passed in Maine give the Governor broad emergency powers to utilize all the manpower and material resources of the state. In Massachusetts the Governor may suspend any law, rule, or regulation affecting the employment of persons.

New action by legislatures to meet the war emergency includes: Passage in New York of a law enabling the Department of Labour to issue permits waiving legal provisions as to work hours of women 18 years of age or over (effective only during the war); in New Jersey of an amendment to the night work law permitting the Governor to suspend it "in time of war or other serious emergency"; in Virginia permitting employers on war work to employ women 18 and over for 10-56 hours instead of the 9-48 limit in the law, limited to the duration of a war contract and conditions of work must safeguard health.

In Pennsylvania the Industrial Board ruled that employers "actively participating in the defence program" may secure permits to employ women over 21 "beyond the 8-44 hour maximum on 5½ days. The basic law provides for time and a half pay beyond the 44 hours, with a limit to 48 hours a week. The California law requires time and a half for night work, but new orders have been pending. In Indiana the Commissioner of Labour announced he would relax enforcement of the night work law, but would investigate individual cases.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Appointment of New Chief Commissioner—Second Meeting of National Employment Committee—Insurance Registration—Report of Employment and Claims Offices—Employment conditions at the end of March

THE appointment of a Chief Commissioner to succeed the late Dr. Joseph Sirois was announced by the Honourable Humphrey Mitchell, Minister of Labour, on March 17. The new Chief Commissioner is Louis J. Trottier, formerly Treasurer of the General Trust Company of Canada, Montreal. With the two other Commissioners, R. J. Tallon and Allan M. Mitchell, Mr. Trottier will be responsible for administering the Unemployment Insurance Plan throughout Canada.

Since the death of Dr. Sirois, Mr. Arthur MacNamara, Associate Deputy Minister of Labour, has been carrying on as Acting Chief Commissioner. Through the period of organization, Mr. MacNamara with his associates and staff efficiently performed a very difficult task, and will in future carry on his duties as Associate Deputy Minister of Labour.

The new Chief Commissioner is prominent in business and professional circles. In addition to performing the duties of Treasurer of the General Trust Company of Canada, he has been for a number of years Professor of Fiscal and Fiduciary Accounting at the University of Montreal. As such he has taken an active interest in the establishment and development of the administrative and accounting branch of the High School of Commerce, Montreal. Mr. Trottier is Secretary of Le Cercle Universitaire of Montreal.

The opening of the fiscal year was marked by a re-registration of all insurable employees by the Unemployment Insurance Commission, as well as the registration of those not in insurable classes employed in industry. New books for the fiscal year 1942-43 are also being issued.

National Employment Committee

The second meeting of the National Employment Committee, established under the Unemployment Insurance Act as an advisory body on employment matters to the Unemployment Insurance Commission, was held in Ottawa on Wednesday, March 18, 1942. Mr. Tom Moore, Chairman of the Committee, presided and introduced a new member, Mrs. C. H. Thorburn, O.B.E., of Ottawa, appointed by the Commission to represent the Canadian Welfare Council. The appointment of Mrs. Thorburn brings the membership of the Committee to nine, two of whom are women.

Dr. Allon Peebles, Executive Director of the Unemployment Insurance Commission, and V. C. Phelan, Chief Employment Officer, outlined the Employment Service, its establishment, personnel and methods of functioning.

The committee considered the establishment of Regional Committees. The Unemployment Insurance Act provides that Regional Committees shall be established to act in an advisory capacity and assist in the Commission's Employment Service work in each of the five Regional Committees. The five Regional Committees of Canada, for purposes of administration of the Unemployment Insurance Act are: Maritime Provinces; Quebec; Ontario, west to a line drawn approximately through Lake Nipigon to Hudson Bay; the remainder of Ontario and the three Prairie Provinces; British Columbia.

The discussion resulted in recommendations to the Commission respecting the numbers and personnel of each of these Regional Committees, it being suggested that the Executive Committee of the National Employment Committee could assist the Commission in respect to the appointment of the Regional Committees.

In accordance with a previous decision that the National Employment Committee would convene at intervals of three months, it was decided to hold the next meeting about the middle of June.

Insurance Registration

Reports from the district offices of the Unemployment Insurance Commission show that 159,441 employers and 2,674,404 employees have registered throughout Canada. Heretofore, the Unemployment Insurance Commission has issued figures of the numbers of books requisitioned by employers for their employees. Commencing this month it is the intention of the Commission to publish figures regarding the number of employees registered.

A progress report of registration of employers and employees on March 31, 1942 contained the following figures:

Region	Employers Registered	Employees Registered
British Columbia ..	13,316	219,391
Prairie	28,665	364,448
Ontario	60,804	1,060,657
Quebec	44,904	823,242
Maritime	11,752	206,666
	159,441	2,674,404

Report of Employment and Claims Offices for February, 1942

The volume of business transacted by Employment and Claims Offices of the Unemployment Insurance Commission for the month of February, as indicated by the average daily placements effected, showed a gain of more than 11 per cent over that of the previous month, but a loss of nearly 29 per cent from February, 1940. Under the former comparison, increased placements were reported in manufacturing, construction, transportation, trade and mining, that in the last named group being minor only, while a substantial decline took place in logging and nominal decreases in agriculture, finance and services. When compared with February a year ago, large reductions in placements were recorded in construction, services and logging, as well as a moderate decline in agriculture; however these losses were partly offset by improvement shown in manufacturing, transportation, trade, finance and mining, the most noteworthy of which was in manufacturing.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered, each month, at employment offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications rose sharply during February, 1942, standing at 61·1 and 49·7 respectively, in comparison with ratios of 53·4 and 43·4 in January and with 49·5 and 46·0 in February a year ago.

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during February, 1942, was 1,148, as compared with 1,033 during the preceding month and with 1,413 in February last year.

The average number of applications for employment received daily by the offices during the month under review was 1,879, in comparison with 1,933 in January, 1942, and with 2,851 during February, 1941.

The average number of placements made daily by the offices of the Commission during February, 1942, was 934, of which 615 were in regular employment and 319 in work of one week's duration or less, as compared with a total daily average of 839 during the preceding month. Placements in February last year averaged 1,313 daily, consisting of 840 placements in regular and 473 in casual employment.

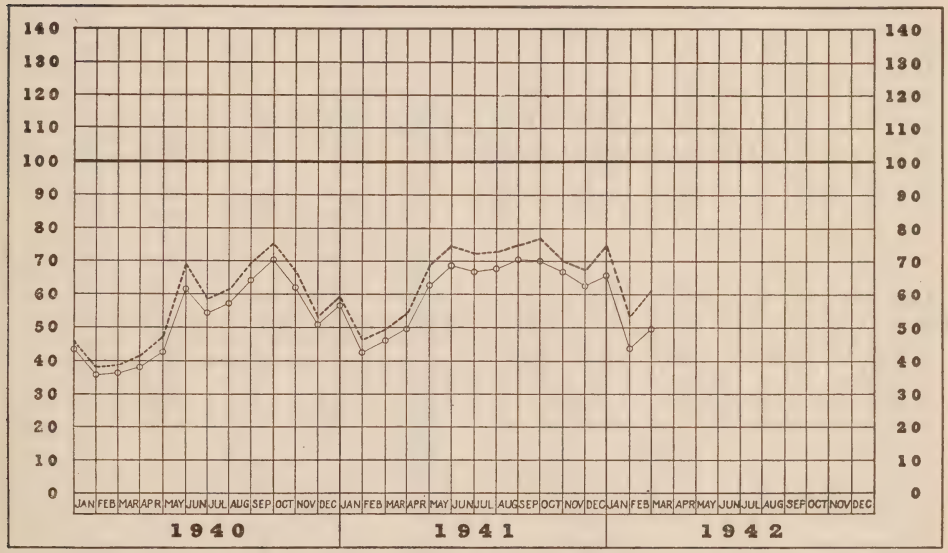
During the month of February, 1942, the offices of the Commission referred 24,725 persons to vacancies and effected a total of 22,410 placements. Of these, the placements in regular employment were 14,747, of which 11,436 were male and 3,311 female, while placements in casual work totalled 7,663. The number of vacancies reported by employers was 17,296 for men and 10,250 for women, a total of 27,546, while applications for work numbered 45,075, of which 31,897 were from men and 13,178 from women. Reports for January, 1942, showed 26,823 positions available, 50,250 applications made and 21,801 placements effected, while in February, 1941, there were recorded 33,889 vacancies, 68,417 applications for work and 31,489 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (2 months)	28,988	15,223	44,211

Nova Scotia and Prince Edward Island

There were increases of nearly 16 per cent and 52 per cent, respectively, in the number of vacancies offered through employment and claims offices in Nova Scotia and Prince Edward Island during February, 1942, when compared with the previous month and with February a year ago. Placements, likewise, were over 14 per cent higher than in January and almost 50 per cent in excess of those recorded during the corresponding month of 1941. When comparing placements by industrial divisions during the period under review with those of February last year, the most important increases were recorded in manufacturing, construction and services, a slight gain in transportation being more than offset by a decline in logging. Changes in other groups were small. Industrial groups in which most of the placements were effected were: services 1,290; construction 1,020 and manufacturing 564. During the month 1,600 men and 162 women were placed in regular employment.



New Brunswick

During the month of February, positions offered in New Brunswick were nearly 3 per cent more numerous than in January, but 30 per cent below those recorded during the cor-

responding month a year ago. Placements were almost 17 per cent above those of the preceding month, but nearly 40 per cent fewer than in February, 1941. Comparatively heavy reductions in placements under the second comparison were reported in services and construction, minor gains only being shown in all other groups. The majority of placements recorded during the month were in the following industries: services 366; trade 83; manufacturing 49; logging 45 and construction 43. Placements in regular employment numbered 152 of men and 52 of women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

Quebec

The demand for workers, as shown by orders listed at employment and claims offices in Quebec during February, was almost 36 per cent above that of the preceding month, but 67 per cent less than in February, 1941. Placements were 103 per cent above those of January, but over 80 per cent fewer than in the corresponding month a year ago. All industrial divisions, except transportation, showed declines in placements from February last year, the greatest reductions being reported in services, construction and logging, followed by a smaller loss in manufacturing. Groups in which most of the placements were effected were: services 718; manufacturing 497; construction 483 and transportation 171. There were 979 men and 468 women placed in regular employment.

Ontario

Orders listed at employment and claims offices in Ontario in February were only fractionally higher than during the preceding month and one per cent below those of February, 1941. Placements, too, were slightly above the number reported in January, but over 9 per cent fewer than in the corresponding period a year ago. A large decline in placements from February last year took place in construction and together with smaller losses in logging and agriculture accounted for the decrease in the province as a whole, although these losses were partly offset by a moderate gain in manufacturing and small advances in services, transportation and trade. Placements by industrial divisions included: services 3,705; manufacturing 2,666; construction 1,385; logging 892; trade 551; transportation 309 and agriculture 192. Regular placements numbered 4,738 of men and 1,616 of women.

Manitoba

During February, vacancies offered through employment and claims offices in Manitoba were over 26 per cent fewer than in January, but nearly 32 per cent in excess of Feb-

* 814 Placements effected by offices now closed.

ruary, 1941. Placements declined almost 22 per cent from January, but increased nearly 3 per cent over the corresponding month a year ago. When a comparison of placements by industries was made with February last year, gains were reported in logging and manufacturing, but these were more than offset by declines in construction and agriculture. Small changes only were reported in all other groups. Industries in which employment was found for more than 100 workers included: services 672; logging 612 and manufacturing 341. During the month 1,178 men and 239 women were placed in regular employment.

Saskatchewan

Employment opportunities, as indicated by orders received in Saskatchewan during February, were nearly 29 per cent less numerous than in the preceding month and almost 11 per cent below those of the corresponding period a year ago. There was a decline in placements of nearly 38 per cent when compared with January and of 18 per cent in comparison with those of February, 1941. Moderate decreases in placements from the corresponding month last year were reported in services and agriculture and a small gain in logging. Changes in other groups were negligible. The majority of placements during the month were recorded in services and numbered 465. Placements in regular employment numbered 258 of men and 192 of women.

Alberta

Employment and claims offices in Alberta were notified in February of nearly 16 per cent fewer vacancies than in January and almost 9 per cent fewer than in February, 1941. Placements also recorded a loss of 14 per cent from the preceding month and of 15 per cent from the corresponding period last year. Reduced placements in logging, agriculture, services and manufacturing accounted for the decline from February, 1941, although a fair gain was shown in construction, as well as small increases in mining and trade. Placements by industrial groups included: services 461; logging 393; construction 257 and agriculture 152. There were 1,002 men and 205 women placed in regular employment.

British Columbia

Opportunities for employment, as shown by calls received at Employment and Claims Offices in British Columbia during February, were over 24 per cent above those of January, 1942, and nearly 26 per cent more numerous than the number reported in February, 1941. Placements showed an increase of 11 per cent over the previous month, but a decrease of nearly 2 per cent when compared with those of February a year ago. The reduction in placements from the corresponding month of 1941 was greatest in construction and services, with a minor loss

also being shown in agriculture. Improvement, however, was noted in manufacturing, logging and trade, although none of these gains was outstanding. Industrial groups in which the majority of placements were made were:—services 974; manufacturing 601; construction 553 and logging 277. During the month 1,529 men and 377 women were placed in regular employment.

Movement of Labour

During the month of February, 1942, the offices of the Unemployment Insurance Commission effected 14,747 placements in regular employment, 1,476 of which were of persons to whom was granted the reduced transportation rate, 616 proceeding to centres within the same province as the despatching office and 860 to other provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4, is granted by the railway companies to bona fide applicants at the employment offices who may desire to travel to distant employment for which no workers are available locally.

In Quebec province during February, Rouyn despatched one bushman and one handyman to Val d'Or. In Ontario, transfers at the reduced rate were 417 in number, all provincial, the majority of these workers being transferred by the Port Arthur office to points within its own territory and consisting of 196 bushmen, 47 teamsters, 23 carpenters, 12 cooks, 10 cookees, 5 sawmill labourers, 4 drillers, 2 bakers, 2 blacksmiths, 2 handymen, 2 machine men, 2 mechanics, one camp clerk, one foreman, one mucker, one pipe fitter, one powder man, one steam fitter and 36 labourers for the Hydro Electric. Fort William and Sudbury, together, also directed 59 persons to localities within their own zones, the former sending 34 bushmen, 6 teamsters, one blacksmith, and one cookee and the latter 11 bushmen, 3 cookees, 2 sawmill hands and one truck driver. In addition, North Bay sent to Sudbury 2 mill hands; to Sault Ste. Marie, 2 bricklayers and to Timmins, one cook, while Sudbury forwarded to Hamilton 3 trainees and Windsor sent to Barrie one steamfitter. The labour movement in Manitoba consisted of the despatch of 10 men provincially and 684 interprovincially. Of the first named, two labourers and one bushman journeyed from Dauphin to points within its own territory and 4 miners, 2 farm hands and one bushman from Winnipeg to centres covered by the Winnipeg office. The entire interprovincial transferral of men also emanated from Winnipeg and was as follows:—To Fort William, one bushman; to Kenora, one cook; to Port Arthur, 488 bushmen, 29 cookees, 28 carpenters, 17 miners, 17 teamsters, 13 cooks, 11 truck drivers, 4 mechanics, 3 pipe fitters, 2 foremen, 2 engineers, 2 dragline operators, one powder man, one oiler, one fireman, one machine helper, one mucker, one shovel operator and 47 labourers for the Hydro Electric; to Prince Albert, one cookee and to Yorkton, 10 bushmen and 2 cookees. In Saskatchewan, 136 transfers were issued, all for bushmen travelling to centres outside the province, 7 going from Saskatoon to Dauphin, 6 from Saskatoon to Sault Ste. Marie and 123 from Regina to Port Arthur. Alberta certificates numbered 226, of which 186 were provincial and 40 interprovincial. For the former the despatching office was Edmonton, the destination, areas within its own territory, the occupations of those thus benefiting by the reduced rate, 122 bushmen, 19 miners, 8 mill hands, 5 cookees, 4 teamsters, 4 muckers, 3 cooks, 2 swampers, 2 welders, 2 flunkeys, 2 labourers (oil refinery) one watchman, one chokerman, one machinist, one diesel engineer, one waitress, one stock keeper, one skinner (oil refinery) and 5 mine labourers. Edmonton also forwarded to Prince Rupert 22 bushmen, 3 chokermen, 3 lumber handlers, 3 swampers, one cook, one teamster and one mill hand and Calgary directed to Victoria 4 riveters, one holder-on (ship industry) and one sheet metal improver. Taking advantage of the reduced rate in British Columbia was one man bound for Kamloops from Vancouver for employment in the logging industry.

Of the 1,476 workers who profited by the reduced transportation rate during February, 1,223 were conveyed by the Canadian National Railways, 252 by the Canadian Pacific Railway and one by the Temiskaming and Northern Ontario Railway.

Employment Conditions at the End of March

Placement activities as reported by Employment and Claims Offices during the month of February, 1942, together with statistical summaries for that period, are covered by an earlier section of this report. Later reports received from Offices indicate that conditions at the end of March were as follows:—

In the Maritime Provinces, farmers were preparing for spring ploughing and seeding but weather and road conditions restricted activity. At lobster fishing centres, fishermen were preparing for seasonal operations. In most areas, logging operations were practically completed and men were reported as leaving the woods to secure work on farms, although the spring river drive had not opened. Coal mining continued steady, and in manufacturing plants a high level of activity was maintained,

while sawmills reported a heavy cut of lumber. Construction projects progressed favourably but little new work was begun, some slackening in activity being caused by weather conditions and shortage of materials. Passenger and freight traffic by rail continued to be heavy, while freight by motor truck increased, where road conditions were favourable. Water transportation was active, coastal transportation being normal, but lack of bottoms interfered considerably with export trade. There was a definite shortage of household workers. Casual workers were being accepted in lieu of permanent workers.

There was a light demand for farm hands in Quebec, while the making of maple sugar and syrup had reached the seasonal peak. Logging activities showed a decrease, with men leaving the woods to go to farming districts, and river driving operations had not yet begun. Asbestos mines were operating twenty-four hours per day, with a shortage of labour becoming apparent. Almost all manufacturing plants were working at full capacity, and more women were being employed. Tool makers, first class machinists, mechanics, mill wrights and electricians were in demand. One rubber factory was operating at not more than 50 per cent capacity, and in the aluminum industry a shortage of workers was reported as many former employees had left for farm areas. Apart from several large projects, activity in construction was rather restricted and employment conditions somewhat dull. There was a definite shortage of experienced household workers.

There was an increased demand for experienced farm hands in Ontario, with a decided shortage of workers. Wages offered were from $35.00 to $50.00 a month and board for experienced men. There was a general deduction in logging operations, many camps being closed and crews disbanded although several companies in the northwestern area were continuing operations as long as possible and cutting of pulpwood was continuing. River driving had not commenced. In northern Ontario, many gold miners were registered for employment. Manufacturing firms were, in general, very active, many plants operating twenty-four hours per day. Some rubber companies, however, had ceased or had cut production in many lines. The demand for tool makers, first class machinists, centre floor moulders and core makers exceeded the supply but unskilled workers were being absorbed for training purposes, as the shortage of semi-skilled labour became more apparent. Some lay-offs occurred, occasioned by adjustment from non-essential to essential production, although more women were being employed. There was regional variation in conditions in construction, a number of areas reporting more activity and some seasonal expansion but, in general, conditions were rather dull and many building tradesmen, especially carpenters and bricklayers, were registered for employment. The scarcity of domestic workers became more accentuated. In many cases, casual workers were accepted in lieu of permanent workers.

In the Prairie Provinces, there was an increased demand for farm workers and many orders were unfilled. There was difficulty in measuring accurately the demand and supply, as many farmers were not placing orders until actual spring operations commenced, and also due to the fact that the migration of workers from the woods to farming areas was in process. A number of logging camps had been broken up but some companies were still continuing operations and were experiencing some difficulty in obtaining a sufficient number of experienced workers. Coal mining was less active, a number of men working part-time only and a heavy lay-off was expected daily. Manufacturing continued steady, with a sufficient number of workers to meet the demand. There was little activity in the construction industry. No new projects were begun and weather conditions retarded the initiation of work on repair and maintenance jobs. A slight improvement in retail trade was indicated. Clothing merchants were busy but implement firms reported that, owing to the impossibility of obtaining tractors and tillers, spring sales would be considerably below average. There was a decided shortage of domestics and housekeepers, for homes in rural areas, and many orders for domestics in city homes remained unfilled.

Applicants for farm work in British Columbia were scarce and a marked shortage of experienced workers was becoming increasingly apparent. A few small outfits had closed down logging operations and, in some areas, road conditions made hauling difficult. In general, however, the industry continued to be active and some demand was registered for experienced loggers. Some bushmen were reported as having left the woods, seeking employment in the shipyards. There was a slight decrease in coal mining but it is expected the demand for coal miners will increase when firms now burning oil for heating purposes change over to coal burning. Gold mining was fairly active, there being some need for hard rock miners. There was also a number of unfilled orders for miners and muckers at copper mines. Manufacturing plants, in general, were busy. Sawmills were fairly active, a shortage of logs or a shortage of workers restricting operations, in a few cases. Japanese were being replaced by white

workers. Shipyards reported re-arrangement of working forces and that they expected to be working twenty-four hours a day, seven days a week early in April; skilled, semi-skilled and unskilled shipyard workers were needed. There was a considerable demand for building tradesmen and construction labourers, although some temporary lay-offs of carpenters were reported, owing to delay in delivering materials. Longshoring was more active. There was a marked shortage of experienced household workers.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

IN view of the transference of the functions of the Employment Service of Canada to the Unemployment Insurance Commission, information formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will now be found in the preceding article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for February, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of March."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting February 1, was 12,891, the employees on their payrolls numbering 1,653,942, compared with 1,658,681 (revised) in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 2,114, having an aggregate membership of 324,748 persons, 4·0 per cent of whom were without employment on March 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of February, 1942, as Reported by Employers

There was a further slight decline in industrial employment at February 1, when the 12,891 establishments furnishing information to the Dominion Bureau of Statistics reported a staff of 1,653,942, compared with 1,658,681 at the beginning of January. This reduction of 4,739 persons, or 0·3 per cent, lowered the crude index from 165·8 at January 1, to 165·4 at February 1; it was then higher by 22 per cent than the February 1, 1941, index of 135·2, previously the highest for that date in the period since 1920.

Although the trend at February 1 has been downward in three of the last five years, employment has, on the average, shown a small advance at midwinter in the last twenty-one years. There was accordingly a slight falling-off in the seasonally adjusted index for February 1, 1942, which stood at 171·8, compared with 172·3 at January 1; these two are the highest in the record. The fractional decline at the latest date is the first to be recorded since March, 1940, and the second since the outbreak of war.

The reduction at the beginning of February took place wholly in the non-manufacturing industries, factory employment showing important expansion. In the former class, only logging and railway construction and maintenance reported increased activity. There were moderate losses in mining, building, communications and services, together with large con-

tractions in transportation, highway work and trade. In many cases, the curtailment was seasonal in character.

Following the slowing down over the holidays, the upward trend was resumed in manufacturing, in which the reported increase in the number of employees was approximately three times as great as the number laid off in the curtailment indicated at January 1. Ordinarily, the recovery at the beginning of February results in the reinstatement of little more than half the number released in the preceding month. In spite of this situation, there was paradoxically a fractional decline in the seasonally-corrected index at February 1, the first indicated since April 1, 1940. The latest adjusted figure in manufacturing was 198·4, compared with 199·6 at January 1, 1942. These two, with that of 190·6 at December 1, 1941, are the highest in the record. The crude index, at 191·2 at February 1, was the maximum to date; it was nearly 30 per cent above the February 1, 1941, figure of 147·4.

There was further important expansion in iron and steel plants, the co-operating establishments reporting an increase of some 13,600

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

in their personnel. Textile, chemical, tobacco, electrical apparatus, non-ferrous metal and many other lines also showed decided gains. On the other hand, there were losses in rubber, food and beverage factories, those in the last two classes being seasonal in character.

For February 1, 1941, 12,467 establishments had furnished employment returns showing an aggregate working force of 1,326,092 persons. Based upon the 1926 average as 100, the unadjusted index numbers of employment in the eight leading industries at the beginning of February in recent years are as follows: 1942, 165·4; 1941, 135·2; 1940, 114·4; 1939, 106·5; 1938, 110·4; 1937, 104·1 and 1936, 98·4

The Course of Wartime Employment

As stated in the last report on employment and earnings, the value of the recently-given discussions of the changes in employment since the outbreak of war has largely been vitiated by the seasonal movements in industry from the early autumn to the winter; while activity customarily reaches its maximum about September 1 or October 1, the contractions in succeeding weeks ordinarily reduce employment in the first quarter of the year to its lowest point. In view of these facts, the present comparison of the situation existing at February 1, 1942, with that at September 1, 1939, is greatly abbreviated.

In the first twenty-nine months of the war, employment generally in the Dominion has shown impressive expansion; the interruptions in the generally upward movement have been wholly due to seasonal contractions in the industries particularly subject to such influences. Despite recent seasonal losses in a number of industries, the general index at February 1, 1941, was higher by 38·3 per cent than at

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at Feb. 1 and at Jan. 1, 1942, by Establishments furnishing Statistics, and Weekly Earnings of these Employees as Paid on or about Feb. 1 and Jan. 1.

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

* Revised.

September 1, 1939. The importance of this gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the index rose only by approximately 28 per cent.

Employment in manufacturing during the war period has, for obvious reasons, shown a considerably greater advance than most other industries. From September 1, 1939, to February 1, 1942, the index number of employment in factories rose by 65·8 per cent, while the gain in the non-manufacturing classes was 10½ per cent despite seasonal curtailment in some branches, notably in construction.

Within the manufacturing division, the growth in the durable goods industries has been outstandingly large; the index number in this class has advanced from 100·4 at September 1, 1939, to 219·9 at February 1, or by 119 per cent. The number of persons employed in this category constituted over 52 per cent of all those reported in manufacturing at February 1, 1942, a proportion greatly in excess of that of 40 per cent engaged in the durable goods industries at the outbreak of hostilities.

The production of non-durable goods has also afforded substantially more employment during the war, the index rising from 126·6 at September 1, 1939, to 169·3 at February 1, 1942. This was a gain of 33·7 per cent. Activity in these industries is usually relatively quiet during the winter, owing to seasonal slackening in some classes, notably the food group. In spite of this factor (which also operates in the case of many lines in the durable goods division), employment in the large majority of manufacturing industries was considerably more active at the latest date than it was at September 1, 1939.

The non-manufacturing industries have also shown important advances in the first twenty-nine months of war, although these are on a smaller scale than those in manufacturing. In these divisions, the comparison between the situation at the outbreak of war and that at the beginning of February is also greatly complicated by seasonal movements in industry. This factor partly accounts for the particularly large gains shown in logging, as well as for the substantial decline in construction at February 1, 1942, as compared with September 1, 1939. In logging, employment in the twenty-nine months has increased by some 343 per cent; in mining, by 5·2 per cent, in communications, by 14·8 per cent, in transportation, by 9·1 per cent, in services, by 10·1 per cent and in trade, by 16·2 per cent, while the reduction in construction amounted to 22·4 per cent.

Statistics of Earnings

The results of the eleventh tabulation of statistics of weekly earnings as reported by establishments ordinarily employing 15 persons and over, are contained in the present report. The figures are preliminary.

At the first of February, the sum of $45,746,190 was distributed to the 1,653,942 persons on

* Revised.

the staffs of the 12,891 establishments furnishing data; at January 1, these employers had reported 1,658,681 employees, whose earnings in the week preceding aggregated $43,341,195. A decline of 0·3 per cent in the personnel was thus accompanied by an increase of $2,404,995, or 5½ per cent, in the weekly payroll. The per capita weekly average, at $27.66, was higher by $1.53 than that indicated in the preceding report, when the observance of the Christmas and New Year holidays had lowered the earnings of a great many individuals. The latest average was the largest in the relatively short period of observation; the previous high figure was that of $27.32 reported at December 1.

In the last bulletin on employment and payrolls, the earnings of the 1,657,990 employees of the 12,833 establishments whose returns were

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

* Revised.

then tabulated were given as $43,314,727, paid on or about January 1 for services rendered in the last week in December. The per capita average based on these totals was $26.12. The present report shows slight alterations in some of the figures previously issued, mainly as a result of the inclusion of late returns. The industrial reclassification of certain establishments resulted in some changes in the various industries, without affecting the Dominion, provincial or city totals.

Table I contains a summary of the statistics for the provinces, the eight leading cities, and the main industrial groups, while in Table III appear data for a comprehensive list of industries in the Dominion.

Pending the establishment of a more satisfactory basic period for an index number of payrolls, the statistics of earnings reported at June 1 as having been paid for services rendered in the last week in May have been revised to serve as a starting point from which may be measured the current changes in the purchasing power distributed in payrolls by the establishments co-operating in the current surveys of employment and earnings. The employees of such firms constitute a large proportion of the total working force engaged in industries other than agriculture in the Dominion. The presentation of the figures of earnings in the form of an index number gives a clearer picture of the situation than can be obtained from the use of the current aggregate or average per capita figures. The latter especially are very considerably affected by the dilution of labour which has been a marked feature of the situation in recent months.

The recent movements of employment and earnings in the eight leading industries as a whole and in manufacturing are shown for the Dominion in Table I; the index numbers of employment have been converted from their original base 1926=100 to June 1 1941, for comparison with the index numbers of payrolls.

The much greater growth in payrolls than in employees in recent months is clearly shown in this table; the disparity is particularly striking in view of the fact that during this period large numbers of inexperienced workers have been added to the working forces, presumably in most cases at beginners' rates. Among the reasons contributing to the generally pronounced gains in the payrolls may be mentioned the growing concentration of workers in the highly-paid heavy industries, the payment of cost-of-living allowances, in some cases at rising rates, and the extensive use of overtime work.

The almost uninterrupted increases in the average earnings result from the above factors; while the dilution of labour tends to lower the per capita figure, the fact that the recently reported seasonal losses in employment have affected chiefly casual workers and others whose rates of earnings are usually below average, has had an opposite effect, tending to raise the average. It is thus probable that seasonal movements are partly responsible for the recent changes in the statistics of earnings, although the fluctuations are also undoubtedly influenced by war-time conditions.

The preliminary index numbers of payrolls in manufacturing have generally shown greater advances than have been indicated in the non-manufacturing classes, despite the continued dilution of labour, which is particularly prevalent in the former industries. The slackening of operations over the holidays, however, affected the wages paid factory employees on or about January 1 to a rather greater extent than those of other classes; recovery from such losses, together with renewed expansion in employment in manufacturing, resulted in an increase at February 1 that exceeded the general gain in the non-manufacturing classes.

Earnings by Industries

Manufacturing.—The 994,932 persons employed at February 1 by the co-operating manufacturers throughout the Dominion were

Index Numbers of Employment and Weekly Earnings (June 1, 1941=100)

[1]Revised.

paid $28,237,597 for their services in the preceding week. The same firms had employed 973,600 (revised) persons at the beginning of January, when they had distributed the sum of $25,629,995 (revised) in weekly earnings to their staffs. The increase of 2·2 per cent in the number of employees was accompanied by that of 10·2 per cent in the aggregate payrolls. The per capita weekly average accordingly also showed a large gain, rising from $26.32 received on or about January 1, to $28.38 at February 1. The latter is the highest per capita figure yet recorded in manufacturing as a whole.

A further important increase was indicated in the production of durable goods, in which the reported payrolls showed a proportionately larger gain, with the speeding up of operations following the holiday season. Employment in this class advanced by 3·2 per cent, while the weekly payrolls rose by 12·1 per cent since January 1. Where the index in the former has risen by 19·4 per cent since June 1, 1941, that of earnings has advanced by 35·5 per cent; this growth is partly due to overtime payments. In the non-durable products group, there was a gain of 1·3 per cent, while the earnings rose by 7·9 per cent. The index of employment in this class has risen by 9·2 per cent from June 1, 1941; the increase in the payrolls has amounted to 17·0 per cent.

The highest earnings in the manufacturing classes were again those reported in the miscellaneous non-metallic mineral products division, largely petroleum products; those in the iron and steel, pulp and paper, non-ferrous metal and beverage industries were also unusually high. These classes employ a large proportion of males, and require many highly skilled and experienced workers.

In general, the lowest per capita averages were reported in the tobacco, leather and textile groups, in which considerable numbers of women are employed; not only are the earnings in these categories affected by the sex distribution, but also by the age distribution of workers therein, since the female employees tend, in the main, to belong to the younger age groups. In considering the relative earnings, it must be noted that the existence or the absence of overtime work is also a factor, while the employment of any considerable number of casual workers greatly affects the per capita earnings in any industry.

Logging.—Employment in logging showed a further increase, amounting to 3·4 per cent, while the aggregate payrolls rose by 2 per cent. The disparity in these rates is partly due to the fact that those added to the working forces are taken on at the lower rates of pay. The per capita weekly average showed a decline, falling from $17.76 (revised) paid at January 1 for services in the last week in December, to $17.54 paid at February 1. It must again be mentioned that the figures of payrolls given in this report make no allowance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

Mining.—There was a reduction of 0·6 per cent in employment in mining, in which the reported earnings increased by 11·7 per cent, work having been resumed in a number of mines in which activity had slackened over the holidays. The statistics show that 82,632 persons were paid $2,985,645 at February 1; this was a per capita figure of $36.13. The pay envelope of the average employee at January 1 had contained $32.16 (revised). The increase in aggregate earnings at February 1 took place mainly in coal-mining.

Communications.—In communications, there was a decline of 0·6 per cent in the number employed, and of 2·5 per cent in the weekly payroll. The average earnings paid at February 1 were $27.55, compared with $28.08 at January 1.

Transportation.—The transportation industries reported an aggregate working force of 123,782 men and women at February 1, when the weekly earnings distributed amounted to $4,285,439. The former figure was lower by 2·8 per cent than that at January 1, while the earnings were lower by 5·3 per cent. There was accordingly a considerable decrease in the average earnings, which fell from $35.52 (revised) at January 1, to $34.62 at February 1.

Construction.—Further seasonal losses were indicated in construction, in which the personnel declined by 5·3 per cent, and the aggregate payrolls by 0·7 per cent. There were reductions in employment in building and highway construction and maintenance. The payrolls reported in the former were higher, with the resumption of work after the holidays, while those in highway work were lower. On the other hand, railway maintenance afforded more employment, and the wage payments were also higher. As a result of these varying movements in the different divisions of construction, the per capita earnings in the industry as a whole showed a considerable gain, rising from $23.67 at January 1 to $24.82 at Februrary 1; the resumption of full-time work in many undertakings following the holiday season also contributed to the increase in the average.

Services.—The service establishments furnishing returns employed slightly smaller staffs, but the reported payrolls were rather higher. The average earnings were therefore somewhat higher, being $16.87 at February 1, as compared with $16.73 at January 1. These averages are lower than in any other industrial group, partly

because of considerable proportions of female and part-time workers, and partly because the earnings quoted exclude the value of board and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some 61 per cent of those in the service industry.

Trade.—There was a seasonal decline of 9 per cent in the employees reported in trade, in which the aggregate payrolls distributed were lower by 6½ per cent. The lay-off of considerable number of part-time workers employed during the holiday season largely accounted for the disparity in these percentages. The per capita earnings were decidedly higher, rising from $22.96 at January 1, to $23.61 at February 1.

Finance.—In the financial group, 62,727 men and women were reported to have been paid $1,868,460 at February 1, a per capita weekly average of $29.79. In the last return, their employees had aggregated 62,632, whose earnings were given as $1,870,457, an average of $29.86 per employee. The inclusion of the data for financial organizations raised the general per capita figure of earnings in the Dominion to $26.27 at January 1, and to $27.79 at February 1. Without the statistics for the financial group, the weekly average at the former date was $26.13 and at the latter, $27.66.

Earnings by Provinces

All provinces except Quebec and Ontario reported lessened employment at February 1; the aggregate weekly payrolls disbursed by the co-operating firms at that date were also lower in Prince Edward Island and the three prairie provinces, but elsewhere exceeded those paid at January 1. The gain in the amounts distributed in earnings in the Maritime Provinces was 5·8 per cent; in Quebec, 6·4 per cent; in Ontario, 7·5 per cent and in British Columbia, 3·9 per cent. In the prairie area, there was a decline of 2·9 per cent in the payrolls paid at February 1 as compared with January 1.

The average weekly earnings in all five economic areas were higher than in any preceding period for which data are available. This partly results from intensified activity in manufacturing, with extensive overtime work and the growing concentration of employment in the heavy industries; the fact that many of those laid off at February 1 were seasonal or casual employees, with earnings generally below the average, also contributed to the gain in the average.

Preliminary data on employment and earnings for a number of industries in each of the economic areas are given in Table 1. Manufacturing generally reported a higher level of employment and earnings at February 1 than at January 1, the increases in the latter being proportionately greater, with the result that the per capita averages were also higher. The trends of earnings in the non-manufacturing classes were mixed, but the number of employees and the aggregate payrolls distributed at February 1 in the majority of such industries were smaller. However, the per capita earnings in most cases were higher than in the preceding period of observation, the percentage losses in employment usually exceeding those in the reported payrolls. These movements are no doubt seasonal in character.

Earnings by Cities

The aggregate and average weekly earnings in each of the eight cities for which data are segregated were higher at February 1 than at January 1. The per capita figures in Montreal, Toronto, Hamilton, Winnipeg and Vancouver were the highest in the period for which information is available. The increases in the aggregate payrolls at February 1 ranged from 0·2 per cent in Winnipeg (where the number of employees was smaller than in the last report), to 13·1 per cent in Vancouver, and 15·3 per cent in Windsor; the gain in employment in the former was 1·7 per cent and in the latter, 1 per cent.

Employment by Economic Areas

Contractions in employment were recorded in the maritimes and the western provinces, while firms in Quebec and Ontario showed improvement. Except in British Columbia, the changes indicated were in accordance with the usual seasonal pattern, there ordinarily being declines in the maritime and prairie provinces, and increases in Quebec and Ontario at the beginning of February. On the average, there has also been a slight gain in British Columbia at that date in the period since 1920. Employment in all parts of the country was more active than at midwinter in any other year of the record.

Maritime Provinces.—The trend in the maritime provinces as a whole has usually been downward at the beginning of February in the years since 1920, the average loss in employment being nearly 1½ per cent. At February 1 of the present winter, activity showed a substantial decrease, 3,833 persons having been laid off since their last report by the 929 reporting employers, whose staffs aggregated 133,762. There were losses in each of the provinces in this area, those in New Brunswick being largest.

Building and highway construction, trade and mining in the maritime provinces as a whole reported curtailment. Logging, manufacturing, transportation and railway construction and maintenance, on the other hand, were brisker;

the greatest improvement was in manufacturing, particularly in the iron and steel division.

A contra-seasonal advance had been indicated in the maritime provinces at February 1 of last year, when 886 firms had reported 100,665 employees, or 3,854 more than at January 1, 1941. The index (135·2), was then many points lower than that of 178·8 at the date under review; this figure, which is the highest ever recorded for February, was exceeded in the years since 1920 only by those for the three months immediately preceding.

Quebec.—The upward trend was resumed in Quebec at the beginning of February, the working forces of the 3,228 co-operating establishments aggregating 515,561, as against 510,618 at January 1, 1942. This advance of 1 per cent slightly exceeded the average gain at February 1 in previous years for which data are available; a decline had been indicated at that date in 1941, when the index, at 139·4, was substantially lower than the latest figure of 176·7. These two are the highest ever recorded at midwinter.

There was considerable improvement in manufacturing at the beginning of February, 1942, notably in textile and iron and steel plants, but leather, tobacco, non-ferrous metal and chemical factories also showed important gains. On the other hand, food, rubber and beverage works were slacker. Among the non-manufacturing classes, transportation and trade reported reduced activity, mainly seasonal in character, while there were substantial increases in logging and railway construction and maintenance, that in the latter being due to track clearance work.

For February 1, 1941, the 3,114 firms making returns had employed 399,645 men and women, or 588 fewer than in the preceding month.

Ontario.—There was an expansion in industrial activity in Ontario at the beginning of February. This was reported almost entirely in manufacturing, most of the non-manufacturing classes being slacker. Within the former division, the greatest increases were in iron and steel, which absorbed over 6,000 additional workers, and in textile, tobacco, chemical, electrical apparatus, non-ferrous metal and miscellaneous manufactured products. On the other hand, food, rubber, clay, glass and stone and beverage factories showed curtailment. Among the non-manufacturing groups, logging, mining, building and railway construction reported heightened activity, while there were losses in transportation, highway work and trade, those in the last-named being especially large following the unusually great activity prevailing at the holiday season.

Data were received from 5,572 establishments in Ontario, employing 703,213 persons at the date under review, as compared with 700,934 at beginning of January. This advance of 2,279 workers, or 0·3 per cent, was seasonal in character, although it was not equal to the average gain from January to February in the experience of the years since 1920. A larger advance had been indicated at the beginning of February last year, when the 5,375 employers furnishing information had reported an aggregate working force of 573,711; the index then stood at 143·4, as compared with 173·3 at the latest date. The latter figure is the highest on record for February, having been exceeded only by the index for December 1, 1941, in the period for which data are available.

Prairie Provinces.—Employment in this area has almost invariably declined at February 1 in the twenty-two winters for which data are available. The tendency in Manitoba, Saskatchewan and Alberta was unfavourable at the date under review, when the 1,815 firms co-operating in the prairie provinces reduced their forces by 6,254 persons, to 171,507. Manufacturing, on the whole, showed an advance, there being improvement in iron and steel, textile and petroleum refining plants; logging was also more active. On the other hand, communications, transportation, construction and trade released employees, the losses in the last-named being most marked.

The general contraction in industrial activity at February 1, 1942, rather exceeded the average indicated at that date in the years since 1920, being also larger than that noted at the midwinter of 1941. Standing at 126·8 at the date under review, the index was higher than at the same date in any other year since 1920; the figure for February of last winter was 112·2, while the previous maximum was 113·1 in 1929. At February 1, 1941, statistics had been tabulated from 1,780 establishments, with a personnel of 147,292.

British Columbia.—There was a further decrease in employment in British Columbia at the date under review. Retail trade, transportation, construction and maintenance and logging reported reduced activity, but manufacturing afforded decidedly more employment; the gains took place very largely in iron and steel plants, although lumber mills, chemical factories and a few other classes were also busier. The working forces of the 1,347 reporting employers aggregated 129,899, a decline of 1,874 employees, or 1·4 per cent, as compared with the preceding month. The general loss is contra-seasonal, according to the experience of the period since 1920. However, the latest index, at 140·5, was higher than in any other February for which statistics are on record.

For February 1, 1941, 1,302 firms had furnished information showing that they employed 104,779 men and women, compared with 103,042

at January 1; the index was then 22½ points lower than at the latest date, standing at 118·0.

Index numbers of employment by economic areas are given in Table II.

Employment by Cities

The trend was downward in Montreal and Winnipeg; in Quebec, no general change was indicated, while firms in Toronto, Ottawa, Hamilton, Windsor and Vancouver reported substantially greater employment. Industrial activity in each of these eight centres was at a decidedly higher level than at the same date last winter, or of any other year of the record.

Montreal.—There were important gains in manufacturing, notably in the textile and iron and steel groups, while leather, chemical, non-ferrous metal and other factories were also busier. Most of the non-manufacturing classes, however, were slacker; the largest declines were in construction and trade, and were seasonal in character. The general trend was downward, according to data from 1,861 employers with 235,441 workers, or 1,808 fewer than at January 1. Industrial activity in Montreal has usually advanced between January 1 and February 1 in the experience of the twenty years in which statistics for the larger cities have been segregated; the reduction at the date under review is therefore contra-seasonal. The index stood at 155·2, compared with 126·0 at the beginning of February in 1941, when improvement had been indicated; the 1,816 co-operating establishments had then employed 196,285 men and women.

Quebec.—The 221 firms furnishing information in Quebec City showed no general change in the situation; their working forces aggregated 27,243 at February 1, one more than in the preceding month. The index, at 195·4, was unaltered. There was considerable improvement in manufacturing, mainly in leather, chemical and iron and steel plants. Transportation, construction and trade, however, were seasonally slack. The general index was many points higher than at the corresponding date of last year, when a decrease had been indicated in the 218 returns received; these had shown a combined staff of 20,081.

Toronto.—There were pronounced seasonal losses in retail trade in Toronto, and construction services and transportation were also quieter. On the other hand, large increases were reported in manufacturing. These took place mainly in iron and steel, chemical and textile plants; non-ferrous metal, electrical apparatus and miscellaneous manufacturing works also showed important advances, although these were smaller than those in the first-named industries. On the whole, there was a gain of 2,863 in the employees of the 1,932 co-operating firms, who had 219,648 workers. General improvement at mid-winter is contra-seasonal in the experience of the last twenty years. A moderate loss had been indicated at the beginning of February, 1941, when the index of employment was many points below the figure of 171·0 at the date under review. The 1,846 employers from whom statistics were received at February 1 of a year ago had a working force of 177,587.

Ottawa.—There was a seasonal contraction in retail trade in Ottawa, and manufacturing and transportation were quieter; the construction and maintenance group, on the other hand, was decidedly more active. Two hundred and forty-seven establishments reported 22,500 workers, or 113 more than at January 1. The index of employment, at 170·8, was considerably higher than at the beginning of February, 1941, when a rather larger gain had been indicated by the 241 co-operating firms, who then had 18,132 employees.

Hamilton.—The situation in Hamilton showed improvement, bringing employment to the highest level yet reached in these surveys. The gain took place almost entirely in manufacturing and, more particularly, in iron and steel, electrical apparatus and textile plants, while trading establishments released employees, following the active season over the holidays. Construction was also dull. Statistics were tabulated from 353 employers with a staff of 59,167 men and women, compared with 58,267 in the preceding month. The index reached a new maximum, standing at 181·2 at February 1, 1942; it was then many points above that of 140·6 at the same date a year ago, when an increase had also been reported by the firms furnishing information, whose payrolls had included 45,880 persons.

Windsor.—Automobile and other iron and steel factories in Windsor were decidedly busier; trade and construction were rather quieter, while other industries showed little general change. The 200 reporting establishments employed 34,195 workers, as against 33,849 at January 1. The volume of employment was greater than in any other month for which information is available. A force of 27,896 had been indicated by the 197 employers making returns for February 1, 1941, when the index stood at 201·2, compared with 251·6 at the latest date.

Winnipeg.—In accordance with the movement almost invariably indicated at February 1 in the period for which information is on record, there was a decline in Winnipeg at the date under review. This took place mainly in trade. Manufacturing, on the other hand, was more active, iron and steel, textile, printing

and publishing and other factories reporting greater employment; the increases in iron and steel were most pronounced. Returns were compiled from 559 concerns with a personnel of 52,765, compared with 54,357 in the preceding month. Larger losses, on the whole, had been indicated at February 1 of last year, when a staff of 48,217 had been recorded by the 546 co-operating establishments. The index then was 16½ points below the latest figure of 126·6, to date the highest for February.

Vancouver.—The situation in Vancouver showed considerable improvement. Manufacturing was decidedly brisker, the gains in employment in iron and steel being particularly large. The non-manufacturing classes were not so active, but except in trade, the losses were relatively slight. The 590 firms furnishing statistics had a staff of 59,761, as against 58,737 at January 1. The index, at 169·5, established a new high, being many points above that of 128·8 at February 1, 1941, when 577 employers had 43,873 men and women on their payrolls.

Employment by Industries

Manufacturing.—The upward trend of employment in manufacturing was resumed at February 1, according to data from 7,116 plants with an aggregate of 994,932 employees, as compared with 973,600 in the preceding month. This increase of 21,332 persons, or 2·2 per cent, greatly exceeded the decline indicated at January 1, when some 7,300 workers had been laid off by the co-operating establishments, in the smallest contraction ever indicated at the opening of the year in the period since 1920. In preceding years, the recovery in manufacturing indicated at February 1 has, on the average, resulted in the reinstatement of approximately 52 per cent of the number of workers released at January 1; the gain at the beginning of February of 1941 had, however, been about twice as large as the reduction indicated in the preceding month.

The expansion at February 1, 1942, brought employment in manufacturing to a new high level, the index rising from 187·1 (revised) at January 1, to 191·2 at the date under review. The previous maximum was 188·4 at December 1, 1941. The latest index was 29·7 per cent higher than that of 147·4 at February 1, 1941, previously the peak figure for midwinter in the period of observation.

As already stated, the number of persons added to the working forces at February 1 was greatly in excess of the number laid off at January 1; this situation is similar to that indicated between January 1 and February 1 of last winter. In all other years of the record, however, the recovery at February 1 has provided work for decidedly fewer employees than were released at the beginning of January. In spite of this more favourable development at the date under review, the percentage increase was rather smaller than the average indicated in earlier years of the record. Accordingly, the seasonally-adjusted index in manufacturing for February 1 showed a fractional decline from the extremely high figure reached in the preceding month. The latest corrected index stood at 198·4, compared with 199·6 at January 1. These two are the highest yet reported; both are decidedly higher than the previous maximum of 190·6 at December 1, 1941.

There were especially marked increases at the date under review in iron and steel, which provided work for an additional 13,639 men and women. The co-operating plants employed almost 355,600 men and women; the index, at 262·1, was nearly 54 per cent higher than at February 1, 1941. Other substantial advances recorded at February 1 were in textile and chemical works, while considerable, but rather smaller gains were made in leather, pulp and paper, tobacco, electrical apparatus, non-ferrous metal, miscellaneous non-metallic mineral and miscellaneous manufactured product factories. On the other hand, food, rubber, beverage, fur and clay, glass and stone plants were slacker; in some cases, the declines were seasonal in character.

The crude index numbers of employment in manufacturing at the beginning of February in recent years are as follows: 1942, 191·2; 1941, 147·4; 1940, 120·5; 1939, 106·0; 1938, 110·3; 1937, 105·3 and 1936, 98·5. The base used in calculating these index numbers is the 1926 average as 100.

The 6,830 manufacturers whose statistics were tabulated for February 1 of last year had reported 759,030 employees, as compared with 733,826 at the opening of 1941.

Logging.—Further improvement was recorded at February 1 in logging, the gain compared favourably with the decline noted at the same date in 1941. Over a period of years, little change, on the whole, has been shown between January and February. The 476 co-operating firms employed a staff of 79,272 men at February 1, 1942, as compared with 76,699 at the beginning of January. The movement was favourable in all provinces except British Columbia, the largest additions to the working forces being reported in Quebec and Ontario. Bush work was brisker than in the same period of 1941, or of any other year of the record except 1938.

Mining.—There was a decrease in these industries at the beginning of February, due almost entirely to curtailment in the extraction of non-metallic minerals other than coal; little general change was reported in the coal and ore divisions. The number employed in min-

ing at February 1 rather exceeded that at the same date in any other year of the record, the index standing at 176·8, as compared with 169·1 at February 1, 1941, the previous maximum. Statements for February 1, 1942, were receive from 424 operators with 82,632 employees, or 460 fewer than at the beginning of January of the present year. This decline was seasonal, according to the experience of the period since 1920. The trend had, however, been upward at February 1 of last winter.

Communications.—The working forces of the reporting companies included 26,763 persons, compared with 26,928 in the preceding month. The number employed in communications was larger than at the same date in 1941 or any earlier year since 1931. A moderate loss from January had also been indicated at the beginning of February in 1941.

Transportation.—Reduced activity was reported in all three branches of transportation—steam railway operation, street and electric railway, cartage and storage, and shipping and longshore work. The 557 co-operating employers in the transportation group as a whole had 123,782 workers, as compared with 127,359 in the preceding month. The shrinkage was seasonal. The index stood at 98·2 at February 1, 1942, the highest for midwinter in the years since 1930; the figure for the beginning of February of last winter, was 89·4.

Construction and Maintenance.—Building highway construction afforded less employment, while activity in railway construction and maintenance increased, chiefly as a result of track-clearing operations. On the whole, there was a decline of 8,230 in the number employed by the 1,452 contractors whose data were tabulated, and who had 148,439 persons on their February 1 payrolls. This seasonal reduction exceeded the average for the beginning of February in the period since 1920. A much smaller falling-off had been indicated at the same date in 1941, but employment in the construction group was then quieter, the index standing at 82·5, as compared with 118·1 at the latest date. This is the highest February 1 figure in the record.

Services.—Employment in hotels and restaurants seasonally declined, and there was a small loss in laundering and dry-cleaning establishments; 612 employers in the service division reported 37,217 employees, or 212 fewer than at January 1. The index, at 167·0, was much higher than at February 1 of last year, when losses on a similar scale had been shown in these industries.

Trade.—Following the unusually great activity in trade over the holiday season, there was a marked contraction in the number employed by retailers at February 1, while wholesale houses showed a moderate falling-off. On the whole, 16,000 persons were let out from the forces of the 2,193 co-operating trading establishments, bringing them to 160,905 at the date under review. This decrease of 9 per cent was greater than that reported at the beginning of February in 1941; like the gain from which it was reaction, it also exceeded the average loss at midwinter in the last twenty-one years. The index, at 156·8 at the latest date, was at its maximum for February in the years since 1920.

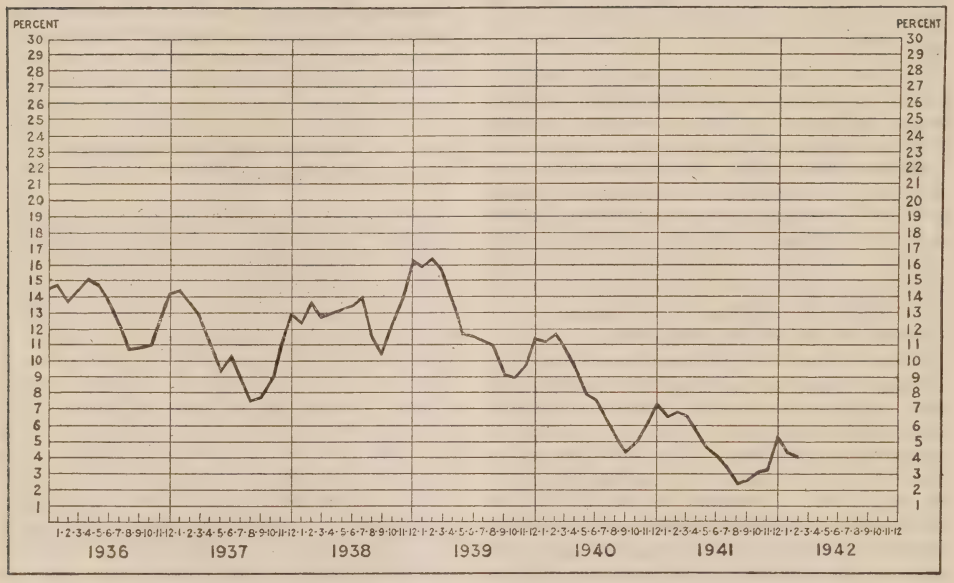
Finance.—At the beginning of February, 761 financial institutions and branches reported a staff of 62,727 employees, compared with 62,632 in the preceding month. The index stood at 121·5; in the preceding month it was 121·3, while at February 1, 1941, the figure was 112·8. The addition of the returns for this group to those furnished for the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of persons included in the February 1 survey of employment to 1,716,669 in 13,652 establishments, and lowers the index of 165·4 in the industries above enumerated, to 163·2; when the employees of the co-operating financial institutions were added to the general figures for January 1, 1942, the index was lowered from 165·8 to 163·6. At February 1, 1941, the general index had been 135·2, while that including finance was 134·0.

Index numbers of employment for the Dominion, in industries other than finance, are given in Table III.

Unemployment in Trade Unions at the Close of February, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There were 2,114 reports tabulated at the close of February. These organizations had a total membership of 324,748 persons, of whom 12,946 or a percentage of 4·0 were unemployed, contrasted with percentages of 4·3 at the end of the previous month and 6·9 at the close of February, a year ago.



The slight increase in employment reflected in February over the preceding month was due mainly to moderate expansion for fishermen and lumber workers and loggers, a slightly higher employment level for members in the

manufacturing industry and a fractional increase in the transportation industry; these advances were more than sufficient to offset the slight contraction which was in evidence among unions in the building and construction trades. In comparison with January, a moderate improvement was apparent in Manitoba and a gain of somewhat lesser degree was observed in reports received from unions in Quebec; in British Columbia there was a fractional advance, only. On the contrary, very slight recessions occurred in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta. Compared with reports tabulated at the end of February, 1941, employment was up substantially in Quebec, and in Alberta and British Columbia, also, there were appreciable advances. Minor increases occurred in Nova Scotia, New Brunswick, Ontario and Manitoba; in Saskatchewan there was a fractional advance.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province, with the exception of Prince Edward Island. In contrast with the previous month, conditions in Winnipeg manifested appreciable improvement and in Halifax, Montreal, Toronto, Edmonton and Vancouver these were fractional increases. On the other hand, in Saint John there was a fractional recession while in Regina, employment subsided slightly. In comparison with the situation at the end of February, 1941, noteworthy improvement was in evidence in Montreal, Edmonton and Vancouver; in Toronto, Winnipeg, Halifax and Saint John there was more moderate expansion. Regina was the only city in this comparison to reflect a contraction and this was fractional only.

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1936, to date. The curve of unemployment in February, 1942, rested at a nominally lower level than in the preceding month, thus reflecting a fractional improvement in conditions. The point of the curve was at a considerably lower level than at the close of February, a year ago, which indicated a noteworthy expansion during the period under review.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

There were 662 reports tabulated from unions in the manufacturing industries. These organizations had an aggregate membership of 148,974 persons, of whom, 3,460, or a percentage of 2·3 were unemployed, in comparison with percentages of 3·1 at the close of January and 4·2 at the end of February, a year ago. In contrast with the previous month, important increases in employment were indicated in reports received from unions of leather and fur workers. Among garment workers, and hat, cap and glove workers, likewise, the situation was more favourable. A moderate gain was observed for rubber workers and fractional advances, only, were apparent for soft drink workers, papermakers and general labourers. Cigar and tobacco workers, electric current employees, textile and carpet workers, butchers,

meat and fish packers, jewellery workers, mine mill and smeltermen and gas workers were reported as being fully employed. Bakers and confectioners, printing tradesmen and woodworkers recorded fractional recessions only. Among iron and steel tradesmen, conditions remained very good although there was a slight reduction in work afforded, owing to the change over in some automobile plants to a war basis. A tendency toward reduced employment was observed for tailors and among metal polishers and clay, glass and stone workers there were moderate recessions. As compared with February, 1941, higher employment levels appeared for nearly all of the trades. Much better conditions were observed for woodworkers, hat cap and glove and leather workers. From the percentage viewpoint, although involving comparatively few members, electric current employees and gas workers manifested marked increases. On the other hand, some contractions were apparent for metal polishers and clay, glass and stone workers, while the percentage of unemployment among fur workers increased substantially.

Reports were tabulated from 53 unions of coal miners, whose aggregate membership was 22,384, of whom 363 or a percentage of 1·6 were unemployed, in contrast with percentages of 1·0 in the previous month and 3·5 in February, 1941. Compared with the preceding month, there was a moderate expansion in employment for British Columbia miners. In New Brunswick as in January, there was adequate employment while a nominal decrease was reflected in Nova Scotia reports; Alberta unions reported a slight reduction in work. In comparison with the situation at the end of February, 1941, noteworthy increases were apparent in reports received from Alberta and British Columbia unions; a fractional advance only was in evidence in Nova Scotia; New Brunswick members, as in February of last year were reported as fully employed.

Returns were received from 248 unions in the building and construction trades. These organizations had a combined membership of 35,978 persons. Of these 5,591 or a percentage of 15·5 were without work, in contrast with 14·2 per cent at the close of the preceding month and 19·5 per cent at the end of February, a year ago. In comparison with January, noteworthy improvement was in evidence among painters, decorators and paperhangers; steam shovel and dredgemen. Granite and stonecutters manifested minor advances. On the other hand, there were nominal decreases for electrical workers and hod carriers and building labourers. Moderate recessions were observed among bricklayers, masons and plasterers, carpenters and joiners and plumbers and steamfitters. Viewed from the percentage standpoint, although involving but few members, bridge and structural iron-workers and tile layers, lathers and roofers reflected noteworthy contractions. In contrast with the situation at the end of February, 1941, pronounced expansion was observed among carpenters and joiners. From the percentage viewpoint, steam shovel and dredgemen were much better employed, but as their membership is small this change did not involve many workers. On the other hand, viewed from the percentage standpoint, likewise, and involving comparatively few members, bridge and structural iron workers and tile layers, lathers and roofers indicated marked recessions.

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1931	8·5	9·2	19·3	17·2	15·7	15·6	19·4	17·6	**16·8**
Average 1932	9·6	14·4	26·4	23·7	20·0	15·8	22·6	21·6	**22·0**
Average 1933	16·0	13·0	25·2	24·4	20·3	17·2	21·7	20·8	**22·3**
Average 1934	8·7	7·9	22·8	18·1	17·7	13·2	17·8	20·2	**18·2**
Average 1935	6·9	8·6	20·9	14·3	12·6	9·8	15·4	16·4	**15·4**
Average 1936	6·8	7·4	18·9	12·0	10·1	9·6	12·0	11·9	**13·2**
Average 1937	5·5	5·2	15·6	8·3	9·0	9·0	12·0	10·6	**10·7**
Average 1938	4·9	10·0	17·4	12·1	11·9	9·1	12·3	14·0	**13·1**
Average 1939	7·1	9·0	16·0	11·1	9·6	8·9	12·3	12·0	**12·2**
Average 1940	3·1	3·7	11·0	6·0	7·3	6·9	9·7	7·6	**7·8**
Average 1941	2·2	2·3	6·1	3·4	4·4	3·4	6·7	4·5	**4·5**
Feb. 1931	6·7	8·5	15·7	17·1	15·6	19·0	18·2	16·3	**15·6**
Feb. 1932	8·3	14·9	23·1	23·0	19·6	19·5	20·2	21·1	**20·6**
Feb. 1933	9·2	17·1	27·5	28·8	22·0	21·8	19·8	21·9	**24·3**
Feb. 1934	10·8	9·8	21·9	22·5	21·6	18·3	17·1	21·2	**20·0**
Feb. 1935	6·4	8·2	22·3	20·0	15·1	11·8	13·8	21·1	**18·2**
Feb. 1936	7·2	6·8	16·3	14·1	12·4	13·1	11·0	17·7	**13·8**
Feb. 1937	7·9	5·0	21·3	11·4	9·4	11·5	9·5	14·1	**13·7**
Feb. 1938	4·6	5·9	19·0	12·8	10·6	9·4	8·8	17·3	**13·7**
Feb. 1939	10·7	11·0	20·3	15·9	11·9	13·3	15·6	16·7	**16·4**
Feb. 1940	6·4	4·5	15·9	10·3	11·9	13·0	7·7	10·7	**11·7**
Feb. 1941	2·8	3·5	9·7	6·2	5·7	5·5	8·0	6·1	**6·9**
Mar. 1941	3·1	3·3	7·9	6·1	5·1	5·8	11·2	7·3	**6·6**

Reports were tabulated from 847 organizations in the transportation industries. The total membership was 75,154 persons, of whom, 2,195, or a percentage of 2·9 were unemployed, in contrast with percentages of 3·2 in January and 6·2 at the end of February, 1941. A moderate improvement was observed for navigation workers during February over the preceding month. Steam railway employees, whose returns constituted over 77 per cent of the entire group membership, reflected a nominally higher level; as did street and electric railway employees also. As in January, adequate work was available for teamsters and chauffeurs. In contrast with conditions at the end of February, a year ago, a substantial advance was noted for steam railway employees. A much higher level prevailed, likewise, for navigation workers and teamsters and chauffeurs indicated nominal increases in work afforded. The situation among street and electric railway employees remained unchanged with practically no unemployment.

Returns were received from 9 unions of retail clerks whose total membership was 3,188 persons. These were adequatedy employed, in contrast with a percentage of 0·1 who were without work at the end of January and a fully employed membership at the close of February, a year ago.

Reports were tabulated from 95 unions of civic employees, whose combined membership was 9,728 persons, of whom, 194, or a percentage of 2·0 were unemployed, in comparison with percentages of 1·9 in January and 2·6 at the end of February, a year ago.

In the miscellaneous group of workers, there were 150 reports tabulated. The total membership reported was 12,051 persons, of whom, 183, or a percentage of 1·5 were without work, in contrast with 1·7 per cent in January and 3·8 in February, a year ago. In comparison with the preceding month, unclassified workers manifested a slight increase and among theatre and stage employees there was a nominal gain, while among hotel and restaurant employees, barbers and stationary engineers and firemen there were fractional recessions. In contrast with the situation at the end of February, 1941, a substantial increase was manifested by stationary engineers and firemen. Hotel and restaurant employees were moderately better employed and fractional increases, only, were apparent among theatre and stage employees, barbers and unclassified workers.

Reports were tabulated from 4 unions of fishermen having a total membership of 2,075 persons. Of these, 175, or a percentage of 8·4 were unemployed in comparison with percentages of 13·6 at the end of January and 21·5 at the close of February, 1941.

Returns were received from 4 unions of lumber workers and loggers whose total membership was given as 3,025. Of these, 170, or a percentage of 5·6 were without work, in contrast with percentages of 11·1 in January and 9·6 at the end of February, a year ago.

Table I shows by provinces the average percentage of union members, unemployed each year from 1931 to 1941, inclusive, and, also, the percentage of unemployment for February of each year from 1931 to 1940 inclusive and for each month from February, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Building Permits Issued in Canada During February, 1942

The February report of building permits compiled by the Dominion Bureau of Statistics, includes returns from 179 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 130 reported detailed operations. The remaining 49 advised that no permits had been issued during the month of February while 25 municipalities had failed to report at the close of March 12.

The total value of permits reported as issued in the month of February is $4,354,695. Revised values for the month of January include returns from 201 municipalities and aggregate $6,432,687. Reports were received from 57 of the 58 original municipalities and show a value of $4,246,246 for February. The corresponding revised value for January includes 58 returns and is $3,712,030, while the February, 1941, value was $4,754,675.

The total value of permits issued by all municipalities during the two elapsed months of the current year is $10,787,382. The value of the 58 municipalities for the same period is $7,958,276, while their corresponding value in 1940 was $8,351,296.

During the month of February new construction of all types amounted to 66·8 per cent of the total value, while the percentage of new residential construction was 35·3.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

DECEMBER-JANUARY RECORD

The British *Ministry of Labour Gazette*, February, 1942, summarizes the December-January employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at January 12 was 100,215 an increase of 7,872 as compared with December 8. Of this total, 27,162 had been classified as unsuitable for ordinary industrial employment.

Those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 7,288, an increase of 2,862 as compared with December 8. Those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 8,951, a decrease of 572 as compared with December 8.

The increases in the numbers of men and boys registered as wholly unemployed or temporarily stopped were mainly due to severe weather conditions, which restricted outdoor employment on the day when the count of the unemployed took place.

The corresponding figures for women and girls on the registers at January 12 were 70,647 wholly unemployed, 7,448 temporarily stopped, and 299 unemployed casual workers. Of those wholly unemployed 2,474 had been classified by interviewing panels as unsuitable for normal full-time employment, and 2,325 had been classified as unable for good cause to transfer to another area. As compared with December 8, the numbers wholly unemployed showed a decrease of 2,234, those temporarily stopped a decrease of 1,387 and unemployed casual workers a decrease of 47.

There were temporary increases in the numbers of boys and girls recorded as unemployed, largely due to the registration of school leavers at the end of December.

The number of applicants for unemployment benefit or allowances on the registers at January 12 was 137,611, as compared with 129,791 at December 8, and 582,573 at January 13, 1941.

United States

According to a report issued by the United States Secretary of Labor, total civil non-agricultural employment showed a slight decline from mid-January to mid-February, with the February total of 39,842,000 being 29,000 less than in the preceding month but 2,394,000 greater than in February a year ago.

Seasonal decreases in employment from January to February were reported in trade, contract construction, transportation and public utilities, and mining. These declines were largely offset by increases in manufacturing and federal, state, and local government employment. The major factor in the rise of 2,394,000 workers over the year interval was the expansion in the manufacturing labour force of nearly 1,400,000 workers. Gains also occurred in all other groups except contract construction, which showed a decrease of 46,000 workers over the year because of the drop in non-federal construction.

The increase in factory employment (0·4 per cent) from January to February was substantially less than the usual seasonal gain (1·7 per cent). Employment in the durable goods industries rose by 7,000 in contrast with with the increase of 36,000 workers in the non-durable goods industries. Seasonal gains occurred in such industries as women's clothing, men's clothing, fertilizers, leather boots and shoes, cotton goods, cigars and cigarettes, and dyeing and finishing. Several non-durable goods industries experienced employment decreases because of restrictions on the use of raw materials, notably, woollen and worsted goods, carpets and rugs, hosiery (where employment reached the lowest level since January 1934), and rubber tires and tubes. The slaughtering and meat packing industry reported a marked decrease in employment, which was largely seasonal in character. Employment in cane sugar refining fell to the lowest point since January, 1938. The radio and phonograph industry which is converting its facilities to war production showed a less than seasonal decline over the month.

The increase in factory employment from January to February carried the index for all manufacturing 132·9 per cent of the 1923-25 average, representing a rise of 12·8 per cent over the year. Factory payrolls advanced 2·0 per cent over the month to 176·9 per cent of the 1923-25 average, and the increase over the year amounted to 39·5 per cent. The increase in working hours in many war industries to well above 48 hours per week, as well as the expansion of hours in other industries, overtime payments and wage rate increases, account for the greatest proportionate gains in payrolls than in employment over the past year.

Wage rate increases averaging 7·5 per cent and affecting 71,122 factory wage earners, were reported by 317 co-operating establishments between mid-January and mid-February. This number is less than the number affected by wage increases in any month since March, 1941.

Among the mining industries slightly larger than seasonal decreases in employment occurred in crude petroleum producing (1·4 per cent), and quarrying and non-metallic mining (1·1 per cent). Anthracite mines showed a small loss in employment coupled with a pay-roll increase of 26·3 per cent, reflecting increased production in this industry in February. Bituminous coal mines reported a small employment decline and metal mines showed a slight gain in contrast to the usual small recession expected in February.

Wholesale and retail trade employment declined approximately by the usual seasonal amount, retail dealers in the automotive field, however, reporting a substantial employment decrease. Employment in telephone and telegraph, and electric light and power industries was lower in February than in the preceding month, while street railway and bus companies reported a slight employment gain, instead of the usual small employment decline.

During February, 54,300 employees were added to the staff of the federal executive service. Of these 9,900 were working within the District of Columbia and 44,400 outside the District of Columbia.

Federal work-relief programs in February continued the decline started a year ago by dropping 55,400 persons from the rolls. The saving in monthly pay rolls amounted to $5,011,000.

Construction programs financed wholly or partially from federal funds in February required the services of 1,172,000 persons and pay rolls of $199,147,000. This represented an addition over January of 97,500 workers and of $21,646,000 pay rolls. Of the total, defense construction projects accounted for 90 per cent of the employees and 91 per cent of the pay rolls.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (Labour Gazette, August, 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts". It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941, with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the Labour Gazette for October.)

The four major changes made by the new Order are: (1) the application of the minimum rates to *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders, and not only as previously to those employees actually engaged on Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation, (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide of except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act.

49333—7

It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During March

During the month of March the National War Labour Board prepared, on request, 107 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various government departments (other than the Department of Munitions and Supply) appear hereunder:—

Group "A" Contracts

(1) *Works of Construction, Remodelling, Repair or Demolition*

Note: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that: "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work, and also specify that the rates of wages set out therein are *"minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of Public Works

Construction of an annex to the Daly Building, Ottawa, Ont. Name of contractors, Alex. I. Garvock, Ottawa, Ont. Date of contract, March 11, 1942. Amount of contract $70,900 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 90
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gas. or elec.	0 55
Compressor operators (gas. or elec.)	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians (inside wiremen):	
Up to Dec. 31, 1941	0 85
On and after January 1, 1942	0 90
Labourers	0 45
Lathers—metal	0 70
Linoleum layers	0 60
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters and glaziers	0 75
Plasterers	1 00
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	1 05
Roofers, felt and gravel: patent: comp.	0 50
Sheet metal workers	0 95
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 55
Shovel operators (gas.)	1 00
Tile setters—asphalt	0 70
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Watchmen	0 40
Waxers and polishers	0 50

Wharf improvements and repairs, Sidney (Nanaimo District), B.C. Name of contractors, The Vancouver Pile Driving & Contracting Co. Ltd., Vancouver, B.C. Date of contract, February 27, 1942. Amount of contract, unit prices (approx. expend. $12,433). A fair wages schedule was included in the contract as follows:—

	Per hour
Piledriver foremen	$1 32½
Piledriver engineers	1 20
Piledriver men	1 07½
Piledriver boommen	1 07½
Piledriver bridgemen	1 07½
Piledriver firemen	0 76½
Labourers	0 45
Piledriver derrick engineers	1 20
Piledriver derrick men	1 07½
Piledriver derrick firemen	0 76½

Construction of Veterans' Pavilion, University Hospital Grounds, Edmonton, Alta. Name of contractors, Bennett & White, Edmonton,

Alta. Date of contract, March 16, 1942. Amount of contract, $87,036 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 65
Carpenters and joiners	0 95
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gas. or elec.	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 75
Electricians (inside wiremen)	0 85
Elevator constructors	1 00
Elevator constructors' helpers	0 77
Engineers on steel erection	0 95
Labourers—common	0 45
Labourers—building	0 50
Lathers—metal	0 80
Lathers—wood	0 80
Linoleum layers	0 60
Marble setters	1 10
Marble setters' helpers (all men assigned to help tradesmen)	0 65
Motor truck drivers	0 50
Motor truck driver and truck	1 50
Ornamental iron workers	0 95
Painters (spray)	0 85
Painters and glaziers	0 80
Plasterers	1 05
Plasterers' helpers (mixing and tempering material)	0 55
Plumbers and steamfitters	1 10
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50
Roofers, felt and gravel: patent: comp.	0 50
Roofers, sheet metal	1 00
Shinglers (wood, asbestos)	0 95
Sheet metal workers	1 00
Stonecutters	1 00
Stonemasons	1 10
Stonemasons' helpers (mixing and tempering mortar)	0 50
Structural steel workers	0 95
Terrazzo layers	1 10
Terrazzo finishers and helpers	0 65
Tile setters	1 10
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Watchmen	0 40
Waxers and polishers (floor)	0 50

Alterations to Public Building to accommodate the Unemployment Insurance Commission, Sorel, P.Q. Name of contractor, Alphonse Gratton, Montreal, P.Q. Date of contract, January 17, 1942. Amount of contract, $6,995. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenter and joiners	0 55
Cement finishers	0 50
Cement and concrete mixer operators:	
Steam	0 60
Gas. or elec.	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 60
Electricians (inside wiremen)	0 60
Labourers	0 35
Lathers—metal	0 55
Linoleum layers	0 50
Motor truck drivers	0 40
Motor truck driver and truck	1 35
Ornamental iron workers	0 55
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Plumbers and steamfitters	0 60
Roofers, sheet metal	0 60
Stonemasons	0 75
Stonemasons' helpers (mixing and tempering mortar)	0 40
Structural steel workers	0 87
Watchmen	0 30
Waxers and polishers (floor)	0 40

Alterations to shed for New Film Vaults, etc., for the Motion Picture Bureau, at National Research Annex, Ottawa, Ont. Name of contractor, Wm. D'Aoust, Eastview, Ont. Date of contract, February 11, 1942. Amount of contract, $4,356 and unit prices. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 90
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gas. or elec.	0 55
Drivers	0 45
Driver, horse and cart	0 60
Driver, team and wagon	0 80
Electricians (inside wiremen):	
Up to December 31, 1941	0 85
On and after January 1, 1942	0 90
Motor truck drivers	0 50
Motor truck driver and truck	1 45
Ornamental iron workers	0 60
Painters (spray)	0 90
Painters and glaziers	0 75
Plasterers	1 00
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	1 05
Roofers, felt and gravel: patent: comp.	0 50
Sheet metal workers	0 95
Structural steel workers	0 90
Watchmen	0 40
Labourers	0 45

Department of Transport

Aerodrome development at Outram, Sask. Name of contractor, Carter-Halls-Aldinger Co. Ltd., Winnipeg, Man. Date of contract, March 9, 1942. Amount of contract, $342,627 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Asphalt rakers	$0 52½
Asphalt tampers, smoothers and spreaders	0 40

	Per hour
Blacksmiths	0 65
Blacksmiths' helpers	0 40
Carpenter and joiners	0 75
Cement finishers	0 55
Cement and concrete mixer operators:	
Steam	0 65
Gas. or elec.	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Enginemen, stationary	0 45
Labourers	0 35
Pipefitters (surface—temp. work)	0 50
Pipelayers, caulkers and solderers	0 45
Plumbers and steamfitters	0 85
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 42½
Powdermen	0 45
Road grader operators:	
Horsedrawn	0 40
Including team	0 70
Gas	0 50
Road roller operators (steam or gas.)	0 70
Rodmen, reinforced steel	0 45
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Shovel operator (gas.)	1 00
Tractor operator (small)	0 50
Tractor operators (LeTourneau, etc.)	0 60
Watchmen	0 30

Construction of a watermain at the airport, Estevan, Sask. Name of contractor, Dominion Construction Co., Winnipeg, Man. Date of contract, March 9, 1942. Amount of contract, $32,554 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Blacksmiths' helpers	0 40
Carpenters and joiners	0 70
Dragline operators (steam or gas)	1 00
Dragline firemen	0 60
Dragline oilers	0 50
Drivers	0 35
Driver, team and wagon	0 50
Drill runners	0 65
Engineers, crane (steam, gas. and elec.)	0 70
Enginemen, stationary	0 45
Hoist operators—tower (gas. or elec.)	0 45
Labourers	0 35
Machinists	0 65
Machinists' helpers	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Pipe fitters (surface temp. work)	0 50
Pipelayers, caulkers and solderers	0 45
Plumbers and steamfitters	0 80
Plumbers' and steamfitters' helpers (all men assigned to help tradesmen)	0 42½
Powdermen	0 45
Pumpmen	0 45
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Shovel operators (gas.)	1 00
Tractor operators (small)	0 50
Tractor operators (LeTourneau, etc.)	0 60
Watchmen	0 30
Welders and burners—acetylene or elec	0 60

Construction of a water supply main at aerodrome, Arnprior, Ont. Name of contractor, H. J. McFarland Construction Co., Picton, Ont. Date of contract, March 9, 1942. Amount of contract, $8,410 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 55
Blacksmiths' helpers	0 40
Carpenters and joiners	0 60
Dragline operators (steam or gas.)	1 00
Dragline firemen	0 60
Dragline oilers	0 50
Compressor operators (gas. or elec.)	0 45
Drivers	0 35
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Drill runners	0 45
Engineers, crane (steam, gas. or elec.)	0 70
Enginemen, stationary	0 45
Labourers	0 35
Machinists	0 60
Machinists' helpers	0 40
Motor truck drivers	0 40
Motor truck driver and truck	1 40
Pipefitters (surface, temp. work)	0 50
Pipelayers, caulkers and solderers	0 45
Plumbers and steamfitters	0 65
Powdermen	0 45
Pumpmen	0 45
Steam shovel engineers	1 00
Steam shovel cranemen	0 75
Steam shovel firemen	0 60
Steam shovel oilers	0 50
Shovel operators (gas.)	1 00
Tractor operators (small)	0 45
Tractor operators (LeTourneau, etc.)	0 55
Watchmen	0 30
Welders and burners—acetylene or elec	0 60

Erection of a sewage disposal plant at airport, Dorval, P.Q. Name of contractor, J. A. A. Leclair, Dupuis, Ltee., Montreal, P.Q. Date of contract, March 23, 1942. Amount of contract, $24,022.30 (estimated). A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 92
Hod carriers	0 53
Carpenters and joiners	0 81
Cement finishers	0 64
Cement and concrete mixer operators:	
Steam	0 64
Gas. or elec.	0 58

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec and the Industrial Standards Act are summarized in a separate article following this.

Construction: Shipbuilding

Vancouver, B.C.—Two Shipbuilding Companies and the Boilermakers and Iron Shipbuilders' Union of Canada, Local No. 1.

Supplementary agreements made January 28, 1942, replace the provisions for the cost-of-living bonus in the original agreements (Labour Gazette, March, 1940, page 278 and June, 1941, page 700), by the following clause:

"A cost-of-living bonus, effective for first payroll period beginning on or after February 15, 1942, shall be paid in accordance with the provisions of Order in Council P.C. 8253 dated October, 24, 1941, and any subsequent amendments thereto. The calculated basis of cost of living index as it stood at October 1, 1941, was $3.65 per week and any subsequent adjustments will be made quarterly in conformity with the rise or fall of Dominion Bureau of Statistics cost of living index number as indicated from August, 1939. Bonus for cost of living to be paid on straight time only."

Vancouver, B.C.—Two Shipbuilding Companies and the Amalgamated Building Workers of Canada, Electrical Workers' Shipyard Unit.

Supplementary agreements made January 27, 1942, replace the provisions for the cost-of-living bonus in the original agreements (Labour Gazette, December, 1941, page 1570 and February, 1941, page 179), by the same clause as quoted above for the boilermakers' agreement. A separate supplementary agreement between one of the companies and the union similarly revises the agreement made for another shipyard of the same company, the original of which was noted in the Labour Gazette, December, 1941, page 1570.

Vancouver, B.C.—Two Shipbuilding Companies and the Shipyard Labourers' Union of Vancouver and District, now Known as the Dock and Shipyard Workers' Union of Vancouver and District, Local No. 2.

Supplementary agreements made January 27, 1942, replace the provisions of the original agreements (Labour Gazette, June, 1940, page 607) with reference to cost-of-living bonus, by the same clause as quoted above for the boilermakers' union.

Vancouver, B.C.—Two Shipbuilding Companies and the International Association of Machisists, Lodge 692.

Supplementary agreements made January 28, 1942, replace the provisions for the cost-of-living bonus in the original agreements (Labour Gazette, July, 1940, page 728, and February, 1941, page 180), by the same clause as quoted above for boilermakers' union.

Vancouver, B.C.—Two Shipbuilding Companies and the Brotherhood of Painters, Decorators and Paperhangers of America, Local No. 138.

Supplementary agreements made January 28, 1942, replace the provisions for the cost-of-living bonus in the original agreements (Labour Gazette, May, 1940, page 493) by the same clause as quoted above for the boilermakers' union.

Vancouver, B.C.—A Certain Shipbuilding Company and the National Union of Operating Engineers, Local No. 3.

Supplementary agreement made January 28, 1942, replaces the provisions for the cost-of-living bonus in the original agreement (Labour Gazette, June, 1940, page 606) with reference to cost-of-living bonus. by the same clause as quoted above for the boilermakers' union.

Vancouver, B.C.—A Shipbuilding Company and the Amalgamated Building Workers of Canada, Patternmakers' Unit.

Supplementary agreement made January 27, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, December, 1941, page 1570) by the same clause as quoted above for the boilermakers' agreement.

Vancouver, B.C.—Two Shipbuilding Companies and the International Association of Plumbers and Steamfitters, Local 170.

Supplementary agreements made January 28, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, July, 1940, page 728, and February, 1941, page 180) by the same clause as quoted above for the boilermakers' agreement.

Vancouver, B.C.—A Shipbuilding Company and the Sheet Metal Workers International Association, No. 280.

Supplementary agreement made January 28, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, July, 1940, page 729) by the same clause as quoted above for the boilermakers' agreement.

Victoria, B.C.—Two Shipbuilding Companies and the Boilermakers and Iron Shipbuilders of Canada (Local No. 2).

Supplementary agreement made in February, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, May, 1940, page 493) by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—Two Shipbuilding Companies and the International Brotherhood of Electrical Workers, Local 230.

For one company the agreement is in effect from October 1, 1941, for the duration of the war and wartime contracts. This agreement is

similar to the one previously in effect and summarized in the Labour Gazette, February, 1941, page 181, with these exceptions:

Only union members to be employed. Wages: to the basic minimum wages of $1 per hour for electricians and 50 and 62½ cents for helpers, a flat cost-of-living bonus of 7 cents per hour is added. These rates are subject to adjustment in accordance with changes in the cost of living, based on Order in Council P.C. 7440 and amendments.

Supplementary agreements were made in February, 1942, to the above agreement and to the agreement with the other company, replacing the provisions for cost-of-living bonus in their agreements by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—A Shipbuilding Company and the Amalgamated Building Workers of Canada, Carpenters and Joiners' Section.

Supplementary agreement made in February, 1942, replaces the provisions for cost-of-living bonus in the original agreements (Labour Gazette, December, 1941, page 1571) by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—A Certain Shipbuilding Company and the United Brotherhood of Carpenters and Joiners, Local 1358.

Supplementary agreement made February 16, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, December 1941, page 1571) by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—Two Shipbuilding Companies and the Dockyard and Shipyard Workers' Union.

Supplementary agreements made in February, 1942, replace the provisions for cost-of-living bonus in the original agreement (Labour Gazette, February, 1941, page 181) by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—A Shipbuilding Company and Their Foundry Employees.

Supplementary agreement made in February, 1942, replaces the provisions for cost-of-living bonus in the original agreement (Labour Gazette, December, 1941, page 1570) by the same clause as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—A Certain Shipbuilding Company and the Brotherhood of Painters, Paperhangers and Decorators of America, Local 1163.

The agreement which came into effect July 9, 1941 between the company and the painters employed by them was summarized in the Labour Gazette, December, 1941, page 1570, was replaced by an identical agreement between the company and the Brotherhood of Painters, Paperhangers and Decorators of America, Local 1163. A supplementary agreement between these two parties, made February 23, 1942, replaces the provisions for the cost-of-living bonus by the same clauses as quoted above for the boilermakers' agreement at Vancouver.

Victoria, B.C.—Two Shipbuilding Companies and the International Association of Journeymen Plumbers and Steamfitters, Local 324.

The agreement between one company and the union was summarized in the Labour Gazette, February, 1941, page 181. A supplementary agreement was made in February, 1942, replacing the provisions for the cost-of-living bonus by the same clause as quoted above for the boilermakers' agreement at Vancouver. For the other shipbuilding company, the previous agreement, as noted in the Labour Gazette, February, 1941, page 181, was made with their employees. A new agreement was made February 26, 1942, between this company and the union which is the same as the union agreement with the first mentioned company with the provisions of the supplementary agreement incorporated.

Victoria, B.C.—Two Shipbuilding Companies and the Amalgamated Building Workers of Canada, Shipyard Section (Shipwrights and Caulkers).

Supplementary agreements made in February, 1942, replace amendments of June 1, 1941 (Labour Gazette, December, 1941, page 1571) to the original agreements (Labour Gazette, February, 1941, page 180) by providing that the base rate of wages be 90 cents per hour for mechanics, effective from June 1, 1941, and that no further requests for increases in wages be made for the duration of the war and wartime contracts. When the union is unable to supply the labour required, others may be employed without interference. The same clause re cost-of-living bonus quoted above in the boilermakers' agreement at Vancouver is in this supplementary agreement.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act", the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934", continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the

spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the extension of three new agreements and the amendment of one agreement and the correction of another, as noted below. Requests for the amendment of the following agreements were published in the *Quebec Official Gazette*: for building trades at St. John and Iberville and building trades at Chicoutimi, in the issue of March 7; for the ornamental iron and bronze industry in Montreal, in the issue of March 14; for barbers and hairdressers at Chicoutimi, in the issue of March 21; for garages and service stations at Montreal and barbers at Hull, in in the issue of March 28. In addition, Orders in Council were published in the *Quebec Official Gazette* during March, approving or amending the constitution and by-laws of two parity committees, and others approving the levying of assessments by seven parity committees.

Manufacturing: Vegetable Foods

Bakers and Bakery Salesmen, Montreal

A correction in the wording of the Order in Council which was summarized in the Labour Gazette, March, 1942, page 352, was published in the *Quebec Official Gazette* of March 21, but does not affect the summary as given in the Labour Gazette.

Manufacturing: Pulp, Paper and Paper Products

Paper Box (Corrugated Paper) Manufacturing Industry, Province of Quebec.

An Order in Council, dated March 11, and published in the *Quebec Official Gazette*, March 14, makes obligatory the terms of an agreement between certain manufacturers of corrugated paper boxes and associations of their employees. Agreement to be in effect from March 14, 1942 to January 1, 1943 and thereafter from year to year, subject to notice, and applies throughout the province of Quebec.

Hours: 55 per week for all except maintenance men, shipping men and watchmen. Overtime and all work on Sundays and six specified holidays, time and one-half.

Minimum hourly wage rates are the same as in the previous agreement as amended. Some of these hourly rates for male employees after 6 months' experience are: operators of corrugating machine 55 cents, other operators 35 to 45 cents, truck drivers and maintenance men 35 cents, general helpers 30 cents, machinists 45 cents; a minimum average wage for male employees of 38 cents. For female employees, minimum hourly rates are: 26 cents for experienced employees, 22 cents for helpers and 17 cents for inexperienced hands; a minimum average wage for female employees of 30 cents per hour. For employees of both sexes, the average minimum wage is 30 cents per hour. A cost-of-living bonus is provided for, in accordance with federal Order in Council P.C. 8253 of October 27, 1941.

Service: Business and Personal

Garages and Service Stations, Montreal.

An Order in Council, dated March 11, and published in the *Quebec Official Gazette*, March 14, amends the previous Orders in Council for these workers (Labour Gazette, August, 1941, page 1013). Hours for journeymen and apprentices: 9 per day. Overtime at 15 per cent extra for first five hours, and time and one-half for all additional overtime. A cost-of-living bonus is provided for in accordance with federal Order in Council P.C. 8253 of October 27, 1941.

Barbers, Valleyfield.

An Order in Council, dated March 26, and published in the *Quebec Official Gazette*, March 28, makes obligatory the terms of an agreement between Le Syndicat des Maîtres-Barbiers et Coiffeurs de Salaberry de Valleyfield (The Union of Master Barbers and Hairdressers of

Salaberry de Valleyfield) and Le Syndicat des Employés Barbiers et Coiffeurs de Salaberry de Valleyfield (The Union of Employed Barbers and Hairdressers of Salaberry de Valleyfield). This agreement is in effect from March 28, 1942, to March 27, 1944, and thereafter from year to year, subject to notice, and applies to the city of Salaberry de Valleyfield and within five miles of it.

Hours are 60 per week. Minimum wage rates: $15 per week for regular barbers; for extra barbers, 60 per cent of the receipts of their work. A cost-of-living bonus is provided for in accordance with federal Order in Council 8253 of October 27, 1941. Apprenticeship to be for three years, and apprentices to be paid from $6 per week after 6 months' experience to $12 after 18 months. A scale of minimum prices to be charged customers is also included.

Barbers and Hairdressers, Rouyn and Noranda.

An Order in Council, dated March 11, and published in the *Quebec Official Gazette,* March 14, makes obligatory the terms of an agreement between L'Union des maîtres-barbiers de Rouyn et de Noranda (The Union of Master Barbers of Rouyn and Noranda), L'Union des employeurs coiffeurs et coiffeurs de Rouyn et de Noranda (The Union of Employer Hairdressers of Rouyn and Noranda) and Le Syndicat des compagnons barbiers de Rouyn et de Noranda (The Union of Journeymen Barbers of Rouyn and Noranda) and L'Association des employés coiffeurs et coiffeuses de Rouyn et Noranda (The Association of Employed Hairdressers of Rouyn and Noranda). Agreement is in effect from March 14, 1942, to March 13, 1945, and thereafter from year to year, subject to notice, and applies to the towns of Rouyn and Noranda and the township of Rouyn.

Hours: 57 per week. Minimum wage rates: for journeymen barbers $15 per week plus 50 per cent of receipts in excess of $25 made by him during the week; for skilled female hairdressers, $12.50 per week. A cost-of-living bonus is provided for in accordance with federal Order in Council P.C. 8253, of October 27, 1941. A scale of minimum charges to customers is also included in this agreement. Apprenticeship is for three years with wages from $6 to $12.50 per week.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Manitoba and Saskatchewan

In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers or employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and of amendments to them are given in the Labour Gazette, October, 1940, page 1077. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Manitoba

Service: Business and Personal

Hairdressers, Winnipeg and Neighbouring Municipalities

An Order in Council, dated March 13, and published in *The Manitoba Gazette,* March 21, makes binding the terms of a schedule of wages and hours for the hairdressing industry in the cities of Winnipeg and St. Boniface, the municipalities of St. Vital, Fort Garry, St. James, East and West Kildonan, the towns of Transcona and Tuxedo and the village of Brooklands. Schedule to be in effect from April 1, 1942, until a new schedule has come into operation or until notice.

Hours: 48 per week, with not more than 10 in a day and so arranged that each employee has one half holiday each week. Overtime allowed only on permit from the Department of Labour and not more than 3 hours per day, 2 days per week, 20 days in a year; overtime to be paid at regular rates. Minimum wage rates for a 48-hour week: operators (with 18 months' experience in the trade) $14; improvers (persons with one thousand hours' training in any school) from $8 per week during first four months' employment as an improver to $12 during third four months; part time workers $3.50 per day or part thereof. A schedule of minimum charges to customers is also included.

Saskatchewan

Manufacturing: Vegetable Foods

Bakers, Moose Jaw.

An Order in Council, dated March 2, and published in *The Saskatchewan Gazette*, March 16, with correction in the March 31 issue makes binding the terms of a new schedule of wages and hours for the bakery industry in the city of Moose Jaw and within 5 miles of it. Schedule to be in effect from March 26, 1942, "during pleasure."

Hours: 54 except inside sales persons and finishers, wrappers or packers of cake or bakery products who work a 48-hour week. Overtime at time and one-quarter. Employees to be allowed nine specified holidays or a day in lieu thereof. One week's vacation with pay. Minimum weekly wage rates: foremen $30; cakebaker $25; doughman $25.50 (an increase of 50 cents); benchhands and ovenman $23.50 (an increase of 50 cents); shipper $18.50 (an increase of 50 cents); apprentices from $10 during first six months to $18 during sixth six months; trucker, relief outside salesmen and male bread wrappers $18, inside sales persons and finishers, wrappers or packers of cake or bakery products from $8 during first three months to $13 after six months; stableman $20; outside salesman, a commission of 20 per cent on retail sales and 8 per cent on wholesale sales, with a minimum of $18 per week; delivery salesmen providing their own vehicles, $35. One apprentice allowed to every three journeymen or fraction thereof.

Construction: Buildings and Structures

Electrical Workers, Regina.

An Order in Council, dated March 2, and published in *The Saskatchewan Gazette*, March 16, as corrected in the March 31 issue makes binding the terms of a schedule of wages and hours for the electrical industry in the city of Regina and within five miles of it. The schedule to be in effect from March 26, 1942, "during pleasure."

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Overtime and all work on holidays to be paid at time and one-half. Minimum hourly wage rates: journeymen electrical workers $1, probationary journeymen (those who have obtained a licence but have worked less than one year after) 90 cents, helpers from 30 cents during first six months to 65 cents during fourth year, foremen 16 cents over the journeymen's rate. A special rate of wages for any handicapped workers.

Slave Labour—German Style

The Labour Press Service published by the Labour Division of the United States War Production Board recently contained an interesting article dealing with the manner in which the Germans treated labour in occupied countries. The article follows:

When several Polish firms recently attempted to raise the wages of their workers, they were compelled by German authorities to cut them to the former low level. The price of rationed bread had not risen, said the Germans, therefore there was no reason to increase wages. Polish workers said existing wages were inadequate to meet the high level of prices. "I frankly admit that your wages would be insufficient for free men," the Nazi official replied, "but for slaves even these wages are too high."

When the Nazis invaded Poland, Jews were banned from all trades but tailoring and shoemaking. Gradually however, the Germans were compelled to relax the racial restrictions and to permit the Jews to work in more and more industries. The textile industry, especially, was one from which Jews were strictly banned. Today 80,000 Jews are employed in this industry in Lodz and the surrounding towns alone.

A new feature introduced by the Nazis into Jewish labour is the organization of a collective. In the Warsaw Ghetto, for example, there are seven collective tailor workshops, each employing about 1,000 workers. Each collective must fulfill a given quota within a specified period of time. Failure brings punishment to all members. Thus, when one of the Jewish collectives in Warsaw failed to deliver the required number of boots on time, the pay of each worker was immediately reduced by 20 per cent.

When one of the cabinet-making collectives sabotaged the Nazi program by producing several thousand window frames and doors, most of which were either too small or too large, the Gestapo ordered each worker arrested and imprisoned for three days. In order that production at the workshop should not be entirely disrupted, the workers had to serve their terms one at a time.

Wherever Poles are under German rule they must work a minimum 60 hour week but are paid less than 80 per cent of the lowest 48 hour week paid to any other nationality.

All labour falls under the heading of a state monopoly. No one is permitted to offer his or her services to accept employment, to change or to leave his work without permission of the authorities.

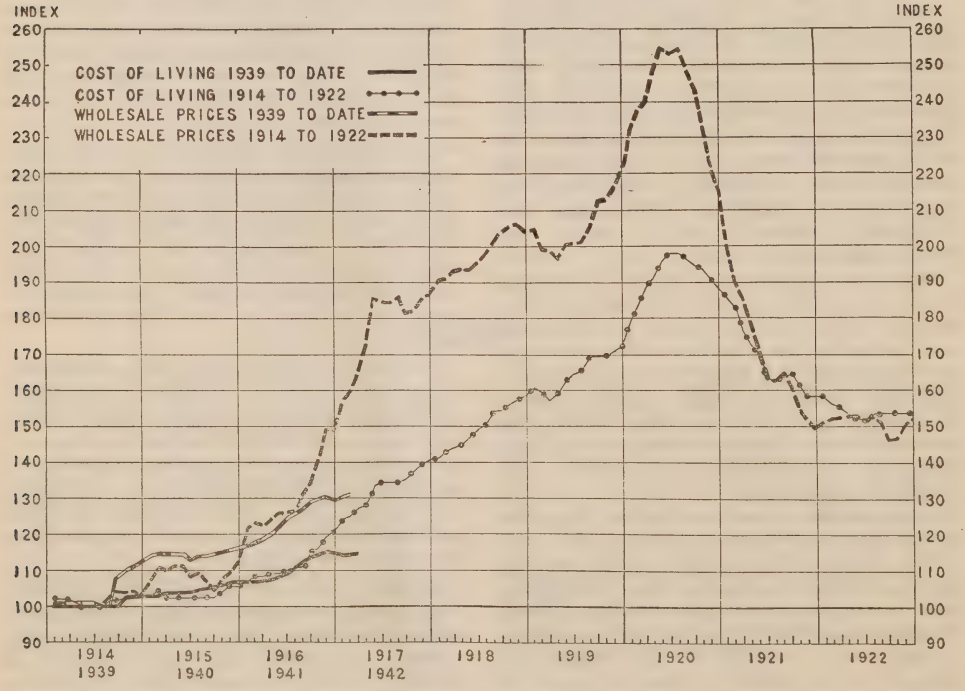
In order to obtain labourers for the Reich, Nazis have employed a gigantic "frame-up" in Norway. Several hundred persons a week have been arrested on trumped up charges—some as vague as "having the intention of escaping to Holland"—and sentenced to death by court martial. Their sentences are then commuted to penal servitude for life and they are shipped to Germany.

Germany now employs 2,000,000 foreigners from occupied countries, among them 1,000,000 Poles. The Reich has ordered 200,000 more workers conscripted for forced labour in Poland to build the great German defences on the Vistula, Hitler's new Wall of Europe.

PRICES, RETAIL AND WHOLESALE IN CANADA, MARCH, 1942

Cost of Living, Prices of Staple Articles and Index Numbers

THE Dominion Bureau of Statistics index number of the cost of living in Canada on the base period 1935 to 1939 as 100 advanced from 115·7 at the beginning of February to 115·9 at the beginning of March due to advances in the food group. Increases in the prices of butter, certain meats, fish, fruits and vegetables more than offset declines in the prices of eggs and lemons. The indexes for other groups were unchanged. Comparative figures for the total index at certain dates are 115·9 for March, 1942; 115·7 for February; 108·2 for March, 1941; 104·6 for March, 1940; and 100·8 for August, 1939, the last prewar month. The wartime increase in the cost of living was therefore 15 per cent down to March 2, 1942, as compared with an increase of 25·2 per cent between July, 1914, and February, 1917, the equal period during the last war.



After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 8253 the index was 115·0 for March, 1942; 114·8 for February, 1942; 114·5 for January, 1942; and 114·6 for October, 1941, thus showing an advance of four tenths of one point between October, 1941, and March, 1942, and 15·0 points since August, 1939.

Foods advanced 24·6 per cent between August, 1939, and March, 1942; clothing 19·7 per cent; home furnishings and services 16·9 per cent; fuel and light 14·0 per cent; rent 7·1 per cent; and miscellaneous 5·7 per cent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In the LABOUR GAZETTE for December, 1941, on pages 1498 to 1501 under the title "Stabilization of Prices in Canada", there appears an article outlining the technique of price control and in subsequent issues under the title "Operation of Price Control in Canada" the activities of the Board in the operation of the price

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY, 1914, AND IN AUGUST, 1939 = 100

DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA

PRICES AS AT THE BEGINNING OF EACH MONTH

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by P.C. 8253 must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at basic wage rates of twenty-five dollars or more per week, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

control policy are summarized. Prices of fresh fruits and vegetables, furs and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm made cheese, honey, maple syrup and fish but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers. On December 19, 1941, the Board announced that an increase in the price of milk by one cent per quart might be authorized in certain areas and under specified conditions. Authorization for similarly limited increases in retail prices of some kinds of tea in certain provinces, by amounts up to five cents per pound, was announced on January 16. On January 20 the Board re-established the price ceiling on onions, the basic period being the week ended January 10, 1942, and on March 10 the price ceiling on potatoes was re-established, the basic period to be February 2 to February 7.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent),

$269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with prices in the period of 1914-1922.

Wholesale Prices

In wholesale prices the Dominion Bureau of Statistics index number on the base 1926 as 100 was 95·1 for March as compared with 94·6 for February; 93·8 for October, 1941; 85·9 for March, 1941, and 72·3 for August, 1939, the last pre-war month. In the classification according to chief component materials four of the eight main groups advanced during the month the greatest increases, one per cent, being in the vegetable products group and in the animal products group. One group was fractionally lower and three were unchanged. The increase in the general index between August, 1939, and March, 1941, was 31·5 per cent. Canadian farm products advanced 34·9 per cent in the same period, consumers' goods 31·0 per cent and producers' goods 31·0 per cent also. The general index advanced 59·8 per cent between July, 1914, and February, 1917, the equal period during the last war.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of March of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the Labour Gazette. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the Labour Gazette.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair conditon, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (Labour Gazette, December, 1941, page 1462) the price ceiling established by P.C. 8527 (Labour Gazette, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (Labour Gazette, October, 1940, page 995), the Board from time to time fixed maximum rentals for housing accommodation in certain of the cities in the list on page 494. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all the other cities in the list the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in Other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive, 502, and since January, 1934, the number is 567.

for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail meat prices again averaged slightly higher at the beginning of March than one month earlier reflecting continued strength in livestock markets. Supplies of cattle delivered to stock yards and packing plants were, however, more than 20 per cent greater for the first two months of the year than for the same period in 1941 and the marketing of hogs was nearly 10 per cent greater, the latter under the stimulus of bacon requirements for the British Ministry of Food. Sirloin steak averaged 34·1 cents per pound at the beginning of March, 33·9 cents for February and 31·5 cents for March, 1941. Fresh loin of pork was 33 cents, 32·8 cents and 24·8 cents per pound in the same comparison. Bacon at 43·1 cents was unchanged from the previous month as compared with 32·6 for March, 1941. Prices of fresh eggs at the beginning of March averaged 38·2 cents per dozen, being about 1 cent lower than for the preceding month but nearly 10 cents lower than for March, 1941. Production was reported to be unusually large for the season but exports to Great Britain for the first two months of 1942 were six times those of the similar period in 1941. Slight increases in the price of creamery butter were reported from most cities, the Dominion average being 38·9 cents per pound as compared with 38·4 cents for February and 38·2 cents for March, 1941. Stocks in storage at March 1 showed a seasonal fall from the levels of February 1 but were also considerably lower than at March 1, 1941. The price of cheese at 36·5 cents per pound was unchanged from February as compared with 24·1 cents at March 1, 1941. Production during the first three months of the year was about four times that of the similar period in 1941. Potatoes averaged 39·7 cents for 15 pounds at March 1 as compared with 37·6 for February and 31 cents for January.

Prices averaged much lower in the prairie provinces than in other parts of the Dominion.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of March, 1942: Halifax, $18.50; Charlottetown, $17.90; Moncton, $18.50; Saint John, $18.50; Quebec, $16.50; Three Rivers, $17.25; Sherbrooke, $18.75; St. Hyacinthe, $17.50; Montreal, $17.75; Ottawa, $18.75; Kingston, $18.50; Belleville, $18.50; Oshawa, $18; Toronto, $16; St. Catharines, $18; Hamilton, $17.50; Brantford, $17.75; Galt, $17.50.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the October, 1941, issue of the Labour Gazette. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1930=100, was 158·5 for February, an increase of 1·3 per cent for the month and of 6 per cent over the February, 1941, level. As compared with January, prices were 3·5 per cent higher for food and tobacco, due to an increase of 12·6 per cent in prices of cereals. Industrial materials and manufactures were only slightly changed in this period.

The *Statist* index number, on the base 1867-1877=100, was 148·6 at the end of January, an increase of 1·4 per cent for the month. Foods were 2·6 per cent higher, due to the advance of 5·1 per cent in vegetable foods. There were only minor changes in industrial materials groups except sundries which were 2·5 per cent higher owing to a substantial rise in imported timber prices.

Cost of Living.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 200 at February 1, showing no change from the previous month. There were slight advances in the clothing and sundries groups.

South Africa

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1910=1000, was 1475 for December, a decrease of 0·5 per cent for the month. The principal decreases were in the "grain, meal, etc." group and in groceries.

Cost of Living.—The official index number of retail prices, on the base 1938=1000, was 1106 for December, showing practically no change from the previous month.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number, on the base 1926=100, was 96·7 for February, an advance of 0·7 per cent for the month. With the exception of a very slight decrease in fuel and lighting materials and of no change in the miscellaneous group, all groups showed a small advance.

Cost of Living.—The Bureau of Labour Statistics index number, on the base 1926=100, was 112·6 at February 15, an advance of 0·6 per cent for the month. There was no change in the "fuel, electricity and ice" group, but all other groups showed increases, the largest of which was one of 2·6 per cent in clothing and of 1·7 per cent in house furnishings. Food was 0·5 per cent higher.

The National Industrial Conference Board index number, on the base 1923=100, was 95·2 for February, an advance of 0·7 per cent for the month. Clothing was 2·5 per cent higher, all other groups showing only fractional increases.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Injury from Lightning not Compensatable under New Brunswick Act

That the dependents of a man killed by lightning in the course of his employment are not eligible for compensation under the Workmen's Compensation Act was the decision given by Chief Justice Baxter of the New Brunswick Court of Appeal. The question was referred to the Court by the Workmen's Compensation Board.

The man, employed in cutting logs, was killed by a lightning-bolt when he took shelter under a tree. Although the death was accidental and the accident occurred during the man's employment, it did not arise out of his employment for there was nothing in the nature of his work by reason of which he was exposed to special danger from lightning. It was, therefore, not compensatable for the New Brunswick Act excludes any accident which is due "to a fortuitous event unconnected with the industry in which the workman was employed." *In re Workmen's Compensation Act and claim for compensation by the dependents of Charles Peter Milton,* New Brunswick Court of Appeal, February 22, 1942.

Action for Wages Set Forth in an Agreement Registered under Quebec Professional Syndicates Act Held Prescribed by that Act

On January 14 the Quebec Court of King's Bench unanimously dismissed with costs an appeal from a decision rendered on February 10, 1938, in Montreal Superior Court rejecting a claim of a bricklayer for the difference between the wages he received and those to which he claimed he was entitled by virtue of a collective agreement which had been registered under the Professional Syndicates Act.

The appellant was employed by the respondents from September 15 to November 13, 1930, from June 17 to December 30, 1931, and from February 1 to May 23, 1934. He claimed that he was a member of an affiliate of the syndicate which concluded the agreement, though this was denied by the respondents. He further claimed that the agreement called for a rate of $1.20 per hour, and that he received this rate only during the first of the three periods, receiving $1 and 35 cents during the other two. The trial Judge dismissed the case on the ground that, whatever the validity of the claims, the action was prescribed by an interpretative paragraph which was added in 1936 to section 21 of the Professional Syndicates Act. The paragraph states that actions which arose out of a collective labour agreement before November 12, 1936, have always been subject to one year's prescription, where the engagement has been for less than one year and to two years' prescription in all other cases.

The question at issue in the appeal was when the period of prescription commenced. The general rule is that it begins as soon as there is a right of action, in this case, as soon as the appellant received lower than the stipulated rate. The appellant argued that he was engaged for the duration of the work on which he was employed and that therefore prescription ran until the work ceased, until May 1934. The Court held, however, that the employer was at liberty to lay him off at any time, and that there was no obligation to re-employ him. The third period of employment began less than two years before the action was initiated, but it was clearly an engagement for less than one year and was therefore subject to one year's prescription.

Mr. Justice Surveyer gave additional reasons for judgment. He concurred in the above reasoning, but added that the question was too important to be decided purely on a plea of prescription. He held that the agreement to which the appellant referred had been annulled in March, 1931, the rate of $1.20 being lowered, after negotiations, to $1. In 1934 the rate of $1 was also abandoned. It was merely a case of the union relaxing the conditions imposed on the contractor when it saw that the higher rate would lead to a cessation of the work. *Paquette v. Damien Boileau Ltée and Others,* (1942) Rapports Judiciaires de Québec, Cour du Banc du Roi 77.

Uncertificated Painter in City where Certificate Required not Entitled to Wages Prescribed under Quebec Collective Agreement Act

On February 13, Mr. Justice Verret in Superior Court of the District of St. François dismissed an action by a Sherbrooke painter for recovery of the difference between the wages he received and those he claimed he should have received under the collective agreement for the construction industry in the Eastern Townships, which had been generalized by an order in council under the Collective Agreement Act. He was paid at the rate of 50 cents per hour whereas the agreement provides for a rate of 65 cents. He did not, however, hold a certificate of qualification, whereas a decree of the Joint Committee for the industry, approved by the Lieutenant-Governor in Council, made such certificates obligatory in towns of over 5,000 inhabitants, and art. 34 of the Act provides that in municipalities

where a certificate is obligatory no person without such certificate may "avail himself of any recourse provided under this Act." The Court held, therefore, that the plaintiff was entitled only to the wages for which he had contracted. The plaintiff submitted that he did not need a certificate since he was an independent contractor and licensed as such by the municipality. This argument was rejected, *Boisland v. Echenberg,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 57.

Contractor Held not Responsible for Payment by Sub-contractor of Rates Prescribed under Quebec Collective Agreement Act

On November 8, 1940, Mr. Justice Chase-Casgrain in Montreal Superior Court dismissed an action by the Joint Committee of the Construction Industry against a general contractor and sub-contractor for recovery of wages which it was alleged should have been paid to the employees of the sub-contractor. The action against the sub-contractor was dismissed on the ground that it had not been proved that the interested workers had, in accordance with the Collective Agreement Act of 1937, taken proceedings against him within one month. With regard to the principal contractor, it was held that he had merely contracted for certain work to be done. He had provided the money necessary for the payment of the wages, but was not in a position to verify the hours worked and thus to see that the workers received the wages required by the law. *Comité Conjoint des Métiers de la Construction v. Beauparlant et Normand et un Autre,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 30.

Worker in Montreal not Entitled to Damages for Accident Caused by his own Negligence

On October 23, Mr. Justice McDougall in Montreal Superior Court dismissed a claim for damages by a worker in a butcher shop who had had his finger partially amputated by a mincing machine. The accident occurred when the plaintiff failed to use the pusher provided for inserting meat in the machine. The Court held that the machine was not dangerous in itself, that the plaintiff had been instructed as to its proper use, and that the accident was due to his own negligence. *Gravel v. Toupin,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 25.

Refusal by Dockers to Handle Goods in Order to Aid Fellow-Members of Union not Actionable in Great Britain

On December 15 the House of Lords dismissed with costs an appeal from a decision of the Court of Sessions refusing to interdict two officials of the Transport and General Workers' Union from instructing dockers in the union not to handle tweed or yarn belonging to the plaintiffs. The plaintiffs were seven producers of tweed cloth in the Island of Lewis in the Outer Hebrides.

The embargo had been imposed by the union during an attempt to organize the hand-weaving crofters on the island. Ninety per cent of the spinners employed by the five spinning mills on the island were members of the union but only a small percentage of the weavers. In 1935 the union had asked the mill operators to employ only members of the union and to raise the spinners' wages, but the operators considered it impossible to accede to either request because of the competition of producers such as the appellants who received cheap supplies of wool from the mainland and farmed it out among the crofters. To secure collective bargaining on the island between all employers and employees, the union suggested to the mill-owners that it should take action to enforce a minimum selling price and the exclusive use of island wool. After protracted discussions the dockers, who were members of the union, were instructed not to handle the yarn of the appellants.

The appellants then charged that there was a combination between the union and the president of the millowners' association to impose the embargo, but it was held that though the president approved of the embargo and was willing to employ only union members if his rivals were compelled to buy yarn from the mills, there was no evidence to show that the embargo was imposed as a result of any agreement with him. In the argument it was conceded that since the respondents were sued as individuals and not in any representative capacity, the case did not involve the provision of the Trade Disputes Act, 1906, which prohibits any action for tort against a trade union or representatives of a union on its behalf.

The question was whether the respondents had committed a tort at common law against the appellants by interfering with their trade. It was held that the test in determining whether a combination to do an act which damages others is actionable is not the result to the injured party of the combined action but the real object in the minds of the combiners. If the predominant purpose is to damage another person and damage results, that is tortious conspiracy. If the predominant purpose is the lawful interest of the combiners, it is not a tortious conspiracy, even though it causes damage to another person.

In the present case the combination was not unlawful since

the predominant object of the respondents in getting the embargo imposed was to benefit their trade union members by preventing undercutting and unregulated competition and so helping to secure the economic stability of the Island industry. The result they aimed at achieving was to create a better basis for collective bargaining, and thus directly to improve wage prospects. (Lord Simon).

The fact that the embargo was for the benefit not of the dockers themselves but of the textile workers was irrelevant:

It is not necessary to a defence to a suit by the person injured by a combination that there should be a complete identity of interest between parties to that combination. There must, however, be sufficient identity of object, though the advantage to be derived from that object may not be the same. (Lord Wright). *Crofter Hand-Woven Harris Tweed Company, Limited, and others v. Veitch and another* (1942) 58 Times Law Reports 125.

Agreement Allowing Workers to be Represented only by Union Making Agreement not Discrimination under British Trade Disputes and Trade Unions Act, 1927

On January 15, the House of Lords reversed a decision of the Court of Appeal and gave judgment in favour of the London Passenger Transport Board, a public authority constituted by Act of Parliament, in an action brought by one of the Board's employees for a declaration that a certain provision in a collective agreement between the Board and the Transport and General Workers Union was void as being contrary to sec. 6 (1) of the Trade Disputes and Trade Unions Act, 1927. The section in the agreement to which the respondent took exception provides that where a disciplinary action is appealed to a disciplinary board the employee concerned may be accompanied by a representative of the Union. Sec. 6 (1) provides:

It shall not be lawful for any local or other public authority to make it a condition of the employment or continuance in employment of any person that he shall or shall not be a member of a trade union, or to impose any condition upon persons employed by the authority whereby employees who are or who are not members of a trade union are liable to be placed in any respect either directly or indirectly under any disability or disadvantage as compared with other employees.

The respondent had been a member of the T.G.W.U. but had joined the National Passenger Workers' Union in 1938. In 1939 he had occasion to appeal to the disciplinary board, but was refused permission to have the secretary of his own union accompany him on the ground that only officials of the T.G.W.U. may represent employees before disciplinary boards. The T.G.W.U., on the other hand, refuses to represent any employees except its own members in good standing. The respondent charged that an implied condition was thereby imposed on employees which placed them at a disadvantage as compared with employees who were members of that union.

It was held, through Lord Russell of Killowen, that the clause in the agreement did not involve the imposition of a condition contrary to sec. 6 (1). The prohibition in the section applied to the authority only: the authority was not permitted to impose a condition on its employees, but the employees or their union might, if strong enough, impose a condition on it. In a case where a prosecution for misdemeanour was possible words of prohibition must be interpreted strictly, and "imposed" could not be defined as "imposed or assented to." The appellant Board had a common law right to hear or refuse to hear representatives appearing for employees. No doubt members of the Transport Union, by virtue of the Board's assent to a modification of this common law right, had a privilege which the other employees did not have. There was, however, no express condition in the clause in question which took away from any person any right he already had. Contrary to the contention of the respondent, moreover, there was no implied condition that a worker could not be represented unless he was a member of the T.G.W.U. No term can be implied in a contract except where it is necessary to give the transaction the efficacy which both parties obviously intended. In the present case the alleged implication would leave the rights of persons not members of the Transport Union exactly where they were without it, so that the implied provision was not only not necessary but would be entirely without effect. In the absence of any such negative implied term no condition of the nature alleged could be found.

It was stated through Lord Wright that:

The privilege [of being represented] was given to all employees without exception. The alleged difficulty sprang not from any construction of the words themselves but from the circumstance, external to the contract, that the Transport union would not (unless it changed its rules or practice as it was free to do) allow its officials to accompany or represent on appeals employees who were not members of the union or members who were in arrear in payment of their subscription. There was nothing in the contract itself which disabled any employee from enjoying the privilege.

Lord Russell of Killowen also raised the question whether the action was rightly brought. He stated that since the respondent claimed no right for himself but merely sought to deprive others of a right and since in fact there had been no interference with an existing right of his, he was not competent to sue without joining the Attorney-General. *London Passenger Transport Board v. Moscrop,* (1942) 58 Times Law Records 120.

VOLUME XLII] MAY, 1942 [NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a further slight decline in industrial employment at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 12,923 employers of labour, each with a minimum of fifteen employees, and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 1,651,067 persons, as compared with 1,654,191 in the preceding month. This loss of 3,124 employees, or 0·2 per cent, lowered the unadjusted index number from 165·4 at February 1 to 165·1 at March 1; it was then 22 per cent higher than at March 1, 1941, previously the maximum for that date in the years since 1920. The base used in calculating these indexes is the 1926 average as 100.

During the period, 1929-1937, upon whose experience the factors of seasonal adjustment are based, a very slightly downward trend in employment was indicated at March 1; the reduction at the latest date was rather less-than-normal, with the result that the seasonally-adjusted index increased fractionally, rising from 171·8 at the beginning of February, to 172·1 at March 1, 1942. These figures, with that of 172·3 at January 1, 1942, are the highest for any month in the more than twenty-one years for which statistics are available.

At March 1 in recent years of the record, the unadjusted index (1926=100) was as follows:—1942, 165·1; 1941, 135·3; 1940, 113·5; 1939, 106·5; 1938, 107·8; 1937, 102·8; and 1936, 98·9.

The co-operating establishments, including those in the finance group, reported the disbursement of $47,986,641 in weekly payrolls at March 1, as compared with $47,615,112 at February 1. This was an increase of 0·7 per cent. The gain took place largely in manufacturing, there being a falling off in employment and earnings in the non-manufacturing division as a whole. The per capita weekly average earnings in manufacturing rose from $28.39 at February 1, to $28.58 at March 1.

Unemployment in Trade Unions.—At the beginning of April, 1942, the percentage of unemployment among trade union members stood at 4·5 in contrast with percentages of 4·0 at the beginning of March and 6·6 at the beginning of April, 1941. The percentage for April was based on returns compiled from 2,187 local labour organizations with a total membership of 333,176 persons.

Report of the Employment and Claims Offices.—Reports received by the Unemployment Insurance Commission from Employment and Claims Offices during the month of March, 1942, showed a small gain in placements over those of February, but a substantial decline from the corresponding period a year ago. All industrial divisions, except logging and transportation, recorded increases under the first comparison, and heavy reductions in services and construction were largely responsible for the loss reported under the second. Vacancies in March, 1942, numbered 34,200, applications 55,617 and placements in regular and casual employment 26,062.

Prices and the Cost of Living.—The official index of the cost-of-living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 115·9 at the beginning of April, the same as at the beginning of March, as compared with 108·6 for April, 1941; 104·6 for April, 1940; and 100·8 for August, 1939. The advance between August, 1939, and April, 1942, was 15·0 per cent as compared with 27·2 per cent between July, 1914, and March, 1917 the comparable period during the last war. In wholesale prices the

Dominion Bureau of Statistics index number on the base 1926 as 100 was 95·0 for April, 1942, as compared with 95·1 for March; 86·6 for April, 1941; 83·1 for April, 1940; and 72·3 for August, 1939, the last prewar month. The increase in the index between August, 1939, and April, 1941, was 31·4 per cent and between July, 1914, and March, 1917, the similar period during the last war was 64 per cent.

Business Statistics.—The most recent statistics reflecting industrial conditions in Canada are given in the table on page 503. The index of employment in March while somewhat lower than during each of the last five months was 22·0 per cent higher than for March, 1941, and 40·5 per cent higher than for August, 1939, the last prewar month. The index of the physical volume of business reflecting the activity in several of the principal industrial groups was slightly higher in March, both as compared with the preceding month and with March, 1941. For the first three months of the present year the index averaged 137, an increase of 8 per cent, as compared with an average of 127 for the first three months of 1941.

An increase in mineral production was recorded in March over the preceding month though the leved of activity was still lower than in March last year. Receipts of gold at the mint were lower during the first quarter of 1942 than in the similar period last year but the production of coal was 9 per cent greater.

The index of the manufacturing group, while somewhat lower in March than in the preceding month was about 8 per cent higher than in March, 1941. In this group cumulative figures for the first three months of 1942 compared with the similar period in 1941 show the following increases; flour production 20 per cent, cattle slaughterings 17 per cent, cigarettes released 23 per cent, footwear production 18 per cent, newsprint production 13 per cent, and steel ingot production 39 per cent. Lower lumber production was indicated by a decline of 22 per cent in the exports of planks and boards while motor vehicle production declined 15 per cent.

In the construction industry the value of contracts awarded in March was greater than in March, 1941, but the total for the three months showed a decline of 36 per cent as compared with the first quarter of 1941.

The output of electric power in March while slightly lower than the highest recorded, that for January, 1942, was about 19 per cent higher than in March, 1941. The increase for the first three months of 1942 was 21 per cent compared with the similar period in 1941.

In railway traffic the number of cars of revenue freight was greater month by month during the period January to March, 1942 than for the corresponding months in 1941. The cumulative figures show an advance of about 14 per cent and the figures available for April indicate a continuance of the upward trend. Gross revenues of the railways were about 27 per cent greater in the three months period than in the similar period in 1941.

The figures as to the value of external trade show exports about 70 per cent higher and imports 37 per cent higher in the first quarter of 1942 than for the same quarter in 1941.

Strikes and Lockouts.—In April the number of strikes and lockouts recorded was 17, involving 6,838 workers with time loss of 20,403 man working days, as compared with 18 disputes in March, involving 3,770 workers and causing time loss of 23,191 days. In April most of the time loss was due to three strikes of coal miners in Nova Scotia, and strikes of steel factory workers at Trenton, N.S., carpenters and labourers at Point Edward, N.S., and shipyard workers at Lauzon, P.Q., and at Midland, Ont. In March the principal disputes involved coal miners at Springhill, N.S., bakers at Montreal, P.Q., automobile parts factory workers at Windsor, Ont., and biscuit factory workers at Vancouver, B.C.

During April, 1941, there were 35 disputes, involving 20,460 workers with time loss of 77,036 days, due chiefly to four strikes of coal miners in Nova Scotia and one in New Brunswick, and to strikes of steel rolling mill workers at Montreal, P.Q., and steel car factory workers at Hamilton, Ont.

Of the 17 disputes during April of this year, 14 were terminated, two in favour of the employers, four in favour of the workers and eight were indefinite in result. Three disputes, involving 771 workers, were recorded as unterminated at the end of the month.

Industrial Disputes Investigation Act

Three applications for the establishment of Boards of Conciliation and Investigation were received during the month of April. Six boards were established and the constitution of one board established in March was completed. Industrial Disputes Inquiry Commissioners were authorized to investigate five disputes in connection with which board applications had been received, as well as one case where no application had been submitted. During the month, Commissioners submitted their reports on the investigation of nine disputes. Seven disputes were recorded as settled.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA*

Cost-of-Living Bonuses, May 15-August 15

On May 5, the National War Labour Board announced that as the Dominion Bureau of Statistics cost-of-living index number had not risen by one whole point or more over the index number for October 1, 1941, there would be no change in the amount or percentage of cost-of-living bonuses presently being paid and during the period May 15, 1942 to August 15, 1942.

The full text of the Board's announcement follows:

"The Dominion Bureau of Statistics has found that the cost-of-living index number for April 1, 1942 of 115·9 (adjusted index 115) has not risen by one whole point or more over the index number for October 1, 1941, of 115·5 (adjusted index 114·6). Accordingly, the National War Labour Board, pursuant to the provisions of Section 12 of Order in Council P.C. 8253, determines and announces, for the period May 15, 1942, to August 15, 1942, subject to the right of employers or employees to apply to a War Labour Board for authorization of payment of such an amount of cost-of-living bonus as a Board may determine to be "fair and reasonable", under the provisions of the Order, that:

"(*a*) There shall be no change in the amount or percentage of cost-of-living bonuses presently being paid;

"(*b*) An employer who has not been paying cost-of-living bonuses may not begin to pay such bonuses."

Job Instructor Training Program established by Training Branch, Department of Labour

Early in May, the Minister of Labour, Honourable Humphrey Mitchell, announced the passage of an Order in Council P.C. 31/3546 providing for the establishment of a Job Instructor Training Program by the Training Branch, Department of Labour.

In announcing this development in the training of industrial workers, the Minister estimated that 15,000 war plant job instructors could be trained for Canadian industry within the next three months.

The plan is identical with a similar one being used with great effect in the war industries in the United States, and will expand somewhat the principle of the chain letter. A group of twelve key men chosen from the principal war production areas by officials of the Training Branch will be trained as institute conductors in the inaugural course which began in Montreal. They are being instructed by Clifton H. Cox, loaned to the Department of Labour by the Training Within Industry Division of the United States War Production Board.

After a week of intensive training the twelve men will return to their home cities—Vancouver, Winnipeg, Hamilton, Toronto, Kingston and Montreal and open 12 training institutes to which the war plants in those areas will send selected men. These institutes, lasting a week, will also be conducted for groups of 12.

The men trained in the institutes will be given certificates as War Production Trainers. They will in turn open courses in their respective plants in job instructor training for men and women who are engaged in a supervisory capacity.

Each job instructor trainer will handle four groups of twelve at a time. By staggering the classes over two weeks so as not to keep supervisors away from the plant for too long periods at a time, it will be possible for each trainer in a plant to produce 48 instructors every two weeks. They will receive certificates as War Production Job Instructors.

In this way, and with industry co-operating, it is considered a simple matter to reach the objective of 15,000 instructors over the next three months.

The training program has been endorsed by all the directors general of production of the Department of Munitions and Supply. It will take in all plants in the gun, automotive, tank, aircraft, naval shipbuilding, small arms, machine tools, merchant shipbuilding, chemical and explosives industries that care to take part. Other firms directly associated with war production are also urged to make use of the institutes. The courses will be given to both men and women supervisors, with women receiving the same training as the men.

"It is generally accepted", the Minister pointed out "that ability to do a job well doesn't necessarily involve ability to transfer one's skill to others. This training program is designed to develop and improve the facility of persons responsible for training others and to provide uniformly effective instruction for all our war plants.

"The instructors will be equipped to train more rapidly and efficiently the workers at the bench and the machine in the job they are to do. The plan should do a great deal to better production schedules all through industry. It

has been demonstrated in the United States that one of its most important benefits is in the development of new workers, those thousands of new hands to whom factory life is both new and strange."

Personnel Administration Courses in Canadian Universities

In the March issue of the Labour Gazette, page 254, reference was made to personnel administration courses to be established in Canadian universities. These government sponsored courses will be opened at Queen's University, Kingston and Toronto University early in June, according to a statement made recently by Honourable Humphrey Mitchell, Minister of Labour.

At Toronto the classes will begin June 1, while those at Queen's will commence one week later.

The courses are part of the direct attack made by the Department of Labour on the many labour administration problems in new and rapidly expanding war industries.

"So many companies have found it necessary to create personnel departments requiring the attention of persons of specialized training", Mr. Mitchell said, "that the Department of Labour, following the practice of the British Ministry of Labour, has co-operated with the universities to make this training available".

Though designed primarily for the war industries, the personnel administration courses will not be confined to them. Applicants nominated by companies with war contracts, or those who might be available for personnel work in war industries will be given preference. The first courses are not intended for persons seeking employment.

No tuition or other fees will be charged. The Department of Labour will pay the necessary travelling expenses of all selected applicants who successfully complete the course. Living or other allowances must be paid by the applicant or the firm sending him.

The courses will require only four weeks full time study under experienced personnel managers loaned by industry. Actually they will take from three to four months to complete. So that the registrants will not be absent from their regular work for too long periods at a time, the universities have divided the instruction into periods of varying lengths. At Toronto, the registrants will attend classes for one week a month for four months. At Queen's the classes will be divided into two periods of a fortnight each, with an interval of eight weeks between.

The pauses between classes will be treated as part of the course, in that the "students" will have the opportunity to apply the lessons to their work in their own plants. In this they will be assisted by consultants, also experienced personnel managers from industry, who will visit the plants to advise and direct as needed. This consultant service will also be available to all successful registrants following completion of the courses. And firms, whose personnel managers are not taking part in the university program, can have the assistance of the consultant service by applying to the Director of Personnel Training, Department of Labour.

Applications for the university courses should be addressed to the Industrial Relations Section, Queen's University, Kingston or the Department of University Extension, University of Toronto.

Appointment of Director of Women's Division, National Selective Service

Elliott M. Little, Director of National Selective Service, announced on May 8 the appointment of Mrs. Rex Eaton, Vancouver, to take charge of the women's division of National Selective Service

Mrs. Eaton, who has a long successful record in the labour field, will deal with the problems of women in industry, arising out of the application of the National Selective Service Order in Council.

For seven years Mrs. Eaton has served as the only woman member of the British Columbia Board of Industrial Relations and has been granted leave of absence for the duration. She is also chairman of the advisory committee of the British Columbia Dominion Provincial Youth Training Committee. As administrator of the Trade Schools Act in British Columbia, she has dealt directly with matters of policy and is familiar with the problems of the workers concerned.

Born in Springhill, Nova Scotia, Mrs. Eaton is a graduate of Acadia University. Married to an Acadia graduate, and mother of three children, she has lived for more than 20 years in Vancouver and is familiar with the western as well as the eastern situation.

Many improvements in the hours of work and working conditions of nurses in British Columbia have been attained by a committee organized by Mrs. Eaton and of which she is still chairman. This committee works directly with hospital boards and the survey it makes is continuous.

Prior to the establishment of the Dominion Unemployment Insurance Commission and the

nationalization of the employment service, Mrs. Eaton worked in conjunction with the women's division of the provincial employment service on a survey which stressed improved conditions of work for household employees in the province.

Three hundred household workers in British Columbia have in the past two years obtained certificates from training classes in which Mrs. Eaton worked in co-operation with the Y.W.C.A. and the Provincial Government. The classes are open to employed household help.

Mrs. Eaton's interest in the labour field has not been restricted to national affairs. When the Pan Pacific Women's Association met in Vancouver four years ago she was chosen to conduct the two-day discussion on "Division of Labour Standards".

Almost unique is the Community Self Help Association in Vancouver which was organized by Mrs. Eaton. Based on the assumption that those in need are willing and anxious to help themselves if the way opens, the association has been responsible for the rehabilitation of a large number of people.

Mrs. Eaton served a term as president of the Vancouver Local Council of Women and was at one time chairman of the national committee on citizenship. She has also served on Y.W.C.A. boards and on the executives of other women's organizations.

H. W. Lea appointed Director of Bureau of Wartime Technical Personnel

Following the appointment of Mr. E. M. Little as Director of National Selective Service (April, 1942, LABOUR GAZETTE, pages 384 and 416), Mr. H. W. Lea has been appointed director of the Wartime Bureau of Technical Personnel. Mr. Lea was formerly the Bureau's chief executive officer.

Mr. L. Austin Wright and Mr. L. E. Westman, former assistant directors of the Bureau, have been transferred to National Selective Service as assistants to the Director, and the services of the Wartime Bureau of Technical Personnel will be utilized by National Selective Service in all matters relating to engineering and scientific personnel.

Mr. Lea graduated in civil engineering from McGill University and spent several years in Montreal working on design and construction in that city. More recently he was Montreal district manager of the Phillips Electrical Works, Brockville, Ontario.

Establishment of Consultative Committee on Labour Policy

A Consultative Committee has been established to confer with the Minister of Labour on matters of labour policy. The Committee is composed of representatives nominated by trade union and employer organizations.

The Minister will confer with the labour and employer panels of the Committee separately or jointly as the matters under consideration may require.

The members of the Committee and the organizations they represent are as follows:—

Canadian Manufacturers Association:

F. A. Sherman, Vice-President and General Manager, Dominion Foundries and Steel, Ltd., Depew Street, Hamilton, Ont.

J. C. Macfarlane, K.C., Vice-President, Canadian General Electric Co., Limited, 212 King St. West, Toronto, Ont.

H. R. Wake, Secretary, Aluminum Company of Canada, Ltd., 1700 Sun Life Building, Montreal, Que.

Trades and Labour Congress of Canada:

Tom Moore, President, Ottawa.

A. D'Aoust, Secretary-Treasurer, Ottawa.

Arthur J. Crawford, Canadian Representative of the Sheet Metal Workers' Inter. Assn., 122 Dowling Ave., Toronto.

Canadian Congress of Labour:

Patrick Conroy, Secretary-Treasurer, Canadian Congress of Labour, Ottawa.

M. M. MacLean, Executive Committee Member and National Secretary-Treasurer, Canadian Brotherhood of Railway Employees and other Transport Workers, 230 Laurier Ave. W., Ottawa.

Confederation of Catholic Workers of Canada:

Georges-Aime Gagnon, President, National Catholic Federation of Printing Trades, 1231 Demontigny St. E., Montreal, Que.

Railway Running Trades:

A. J. Kelly, Dominion Legislative Representative, Brotherhood of Railroad Trainmen, 314 Birks Bldg., Ottawa.

Canadian Chamber of Commerce:

H. H. Bishop, Vice-President, The Robert Simpson Co. Ltd., Toronto, Ont.

L. W. Townsend, Manager, The Staff Department, The Bank of Montreal, Montreal, Que.

Canadian Construction Association:

H. P. Frid, Frid Construction Co., Terminal Building, Hamilton, Ont.

Ontario Mining Association:

H. C. McCloskey, 244 Bay St., Toronto, Ont.

Financial Aid for Medical Students in Ontario Universities

On April 30, the Minister of Labour, Honourable Humphrey Mitchell, announced that through a new arrangement made with university authorities, medical students in Ontario universities would be given financial assistance. The Minister announced the plan following a meeting of representatives of universities with spokesmen for the Departments of Labour and National Defence.

All medical students, other than freshmen, who need aid and who agree to enlist in the armed services when they reach the second last year of their course will receive loans up to approximately $300 a year. The universities will select the students to be helped. Each university will administer its own fund and will make collection of the loans.

When they reach the second last year of their course, students who are physically fit and have a good academic standing will be enlisted in the Army. They will be given leave of absence with pay till graduation, when they will be posted as medical officers.

It became necessary to work out this special plan for Ontario universities when the Provincial Government declined to participate in the original student aid program. Under it the Federal and Provincial governments co-operate on a 50-50 basis, and engineering, science and dental students, who pledge their service to the nation after graduation, are covered. In British Columbia, Alberta, Saskatchewan, Quebec, and Nova Scotia, all co-operating on the 50-50 basis, the money is paid as an outright grant. In Manitoba, at the request of the Provincial Government which pays half the cost, it is loaned.

The Ontario Government declined to co-operate as it considered the plan a war measure and the sole responsibility of the Federal Government. A proposal that it divert some of its $300,000 grant to the R.C.A.F. school at Galt to students' aid was rejected.

The training Branch estimates that the Ontario scheme will cost the Federal Department of Labour $150,000, less repayment of the loans. This figure includes the cost of accelerating the medical course to speed graduation of doctors. The speed up will be obtained largely by shortening the summer vacations of medical students, which in turn cuts down the time in which they can earn money for their tuition fees.

It is thought probable that a similar arrangement will be worked out with the Ontario universities to give aid to dental students. The plan will be enlarged to take in engineering and science students only if the war demand for them makes it necessary.

Director of National Selective Service to be co-ordinating authority in placement of engineering and science university graduates

On May 11 a conference of representatives of 18 universities and various government departments recommended that the Director of National Selective Service should become the co-ordinating authority in the guidance of engineering and science graduates to the armed forces or war industries.

The conference urged that all civil and military departments of government should submit their requirements for such technical personnel to the Director of National Selective Service, who would then guide the graduates into appropriate posts. It was suggested that the channelling of science and engineering graduates towards essential types of work should be commenced at the beginning of the second to last year of their courses.

The conference of 150 persons included university presidents, deans of engineering and science, heads of agricultural colleges, representatives of the armed services, the Department of Munitions and Supply, the Inspection Board of the United Kingdom and Canada, National Research Council and other bodies.

The conference commended the Department of Labour's program of aid for needy students in engineering and science (see preceding note) and urged its extension, under a selective system, to high school graduates otherwise unable to take university engineering and science courses.

The prospective supply of engineers and science workers was held to be far from sufficient to meet the varied wartime needs. Refresher courses were advocated for graduate engineers and other scientific personnel, as well as establishment of special short courses for laboratory technicians. To guarantee continued food production, the scientific needs of agriculture were also discussed.

Canadian Congress of Labour urges establishment of Industrial Councils in each basic industry

Reiterating a recommendation made earlier in the year in its annual memorandum of proposed legislation (LABOUR GAZETTE, March, 1942, pages 291-295), the Canadian Congress of Labour following a two day meeting of its Executive Council, requested that the

Government call national conferences in each basic industry as a first step in the establishment of national, regional and plant councils.

According to the proposed plan, "the chief functions of each industrial council would be to ensure maximum uninterrupted production in each industry; to devise employment and production policies which would maintain industrial harmony with the highest efficiency; to provide for the pooling of experience, patent rights and processes of manufacture, and the transfer of labour or industry where necessary; to establish effective machinery the lack of which causes interruptions of production; to co-operate with similar councils in other industries for all-out production, and to consider proposals for the re-conversion of industry to peace-time production after the war is won.

"The first step, in the opinion of the Congress, is the calling of national conferences in each industry by the federal government, and the subsequent establishment of national and plant councils as the plan is generally adopted. Organized Labour in every industry has plans and suggestions ready for immediate consideration, but it is obvious that the initiative must be taken by the government. Canadian Labour in this respect finds itself in the same position as British Labour after Dunkirk. It was only through the strong and united support of the British public that Labour obtained representation on war-production councils. The results of such participation were extraordinary, and similar results can be achieved in Canada."

Health of workers in Canadian war industries

By a recent Order in Council, officials of the Department of Pensions and National Health have been granted authority to enter and inspect plants engaged on war contracts in order that sanitary and medical facilities may receive proper supervision.

In peace time, the inspection of industrial plants was left almost entirely to the individual provinces, but the vast wartime expansion of factories fulfilling contracts with the Dominion and allied governments—all of which contracts include clauses requiring the contractor to provide sanitary and medical supervision—has made it imperative that federal health authorities actively enter the field.

It is recognized, departmental officials state, that a high standard of health among workers who are engaged in war industry will directly increase the war effort of the allied powers.

The Order in Council also stipulates that the owner of any war contract premises must, if requested, maintain a record of sickness and accidents, permit the display of posters authorized by the Department and the distribution of health and safety literature among employees on the premises, keep his premises at all times in a clean, sanitary condition, and provide lighting, heating, ventilation, water and toilet facilities satisfactory to the authorities.

The contractor is required to provide satisfactory medical, surgical, nursing and preventive services. Any food provided for employees on the premises must satisfy specified nutritional standards, while, as a further safeguard, the contractor is obliged to permit regular physical examinations of persons engaged in preparing or distributing such food.

Any plans for new construction or alterations to existing war factories must also receive the approval of the Department in so far as sanitary and safety facilities are concerned.

Conference of administrators of labour legislation

The Canadian Association of Administrators of Labour Legislation held its fifth annual conference in Ottawa on May 4-6. The Association includes officers of Dominion and Provincial departments, boards or commissions administering labour laws.

The provincial representatives were:—

Alberta—Clayton Adams, Chairman, Board of Industrial Relations.

British Columbia—Adam Bell, Deputy Minister of Labour.

Manitoba—R. A. Stewart, Deputy Minister of Labour; J. Leslie, Chief Conciliation Officer.

New Brunswick—Douglas Cochrane, Director of Labour; John S. MacKinnon, Secretary, Fair Wage Board.

Nova Scotia—T. D. A. Purves, Acting Deputy Minister of Labour.

Ontario—J. F. Marsh, Deputy Minister of Labour; J. R. Prain, Chief Factory Inspector; Patterson Farmer, Industrial Standards Officer.

Prince Edward Island—Hon. Horace Wright, President of the Executive Council.

Quebec—J. O'Connell-Maher, Director of Services; Cyprien Miron, Conciliation and Arbitration Officer; Clovis Bernier, Chief Inspector; O. E. Sharpe, Commissioner, Workmen's Compensation Commission.

Saskatchewan—C. A. Scott, Commissioner of Labour and Public Welfare.

In opening the conference, Honourable Humphrey Mitchell, Dominion Minister of Labour, emphasized the importance of the Association's part in smoothing out difficulties in the application of war labour policies and urged the co-operation of all authorities in what is, after all, the fundamental labour problem, in war as in peace, to ensure for all Canadian citizens freedom from want.

The topics discussed by the conference were among those made especially urgent by war conditions. They included accident prevention, the Dominion wages stabilization and fair wage policies, women in war industries and trade unionism and collective bargaining.

At the annual dinner, an address by Mr. E. M. Little, Director of National Selective Services, on the Selective Services policy, was followed by an interesting discussion.

The officers for the Association for 1942-43 are:—

Past President—A. W. Crawford, Director of Labour Relations, National War Labour Board.

President—H. S. Johnstone, Executive Officer, Saskatchewan Regional War Labour Board.

1st Vice-President—H. R. Pettigrove, Executive Officer, New Brunswick Regional War Labour Board.

2nd Vice-President—T. D. A. Purves, Acting Deputy Minister of Labour, Nova Scotia.

Secretary-Treasurer—Margaret Mackintosh, Research Division, Dominion Department of Labour.

Annual Convention of Industrial Accident Prevention Associations of Ontario

With almost 4,000 delegates in attendance from five provinces of Canada and five states of the United States, the Industrial Accident Prevention Associations of Ontario held its annual convention in Toronto on April 20 and 21.

The retiring president of the associations, Mr. M. F. Verity of the Massey-Harris Company, presided at the opening sessions. Mr. Verity reviewed the work done by the ten divisions in Ontario. He said that in 1941 there were 113,822 accidents as compared with 81,116 in 1940. In view of the fact that the pressure of work had increased and many more untrained workers were in industry, this was a creditable result. Mr. Verity said that the total benefits awarded by the Workmen's Compensation Board in 1941 were $9,898,893 compared with $7,282,877 in 1940.

Mr. M. J. McCarthy, Safety Director, Fisher Body Division, General Motors Corporation, Detroit, said that the responsibility for safety and accident prevention was on management, and that accidents were just as much an indictment of a plant as was the failure to keep production on schedule.

Another prominent speaker at the convention was a former British minister of labour and a noted expert on international labour—Rt. Hon. Margaret Bonfield. She discussed the adaptability of women in industry and pointed out that in spite of the constant exodus of male factory workers into the army, production in Britain had risen 40 per cent.

At the annual banquet the speaker was Mr. H. Napier Moore, editor of *Maclean's* magazine. Mr. Moore said that the security of workers against actual slavery was at stake, and "the only way we can control our destiny is by a decisive victory; we cannot win by accident."

Another speaker was Mr. W. H. Chesnut, Harrisburg, Pa., president of the International Association of Industrial Accident Boards and Commissions. He said that "the field for improvement in safety efficiency is far greater to-day among employees than among employers." He said that most industrial accidents in Pennsylvania in 1941 occurred in spite of every safeguard ever devised or recommended.

Many delegates representing large Canadian companies stressed the importance of the prevention of industrial accidents and the various measures adopted by their organizations in reducing the number of accidents and resulting time loss among workers.

A feature of the convention was an exhibition of industrial safeguarding methods and equipment. It was largely attended and delegates were able to study at first-hand every latest device and equipment invented to make the factory and office a safer place to work in.

The officers elected for the coming year were: president, Mr. T. A. Rice, International Harvester Company of Canada, Ltd.; 1st vice-president, W. H. Munro, Ottawa Light Heat and Power Company Ltd., Ottawa; 2nd vice-president, E. O. Morgan, Canadian National Carbon Co. Ltd., Toronto; honorary treasurer, A. Ross Robertson, Dominion Bridge Company, Ltd., Toronto. At a subsequent meeting, R. B. Morley was reappointed the general manager and J. L. Dodington the assistant general manager and secretary.

Employment of Nova Scotia School Children in Agriculture

To relieve the shortage of farm labour, Nova Scotia has authorized the release of boys and girls from school between June 1 and October 20 for farm work. The scheme applies only to children over 14 years of age and is to be administered by the departments of education and agriculture.

County agricultural representatives will supervise the operation of the plan with the assistance of county committees. Farmers needing help must file applications with the agricultural representative giving full particulars about the conditions of work and wages to be paid. Principals will furnish lists of boys wishing farm work to the agricultural representative who will allot the students among the farmers. Girls will be permitted to work only on the farms of their families or relatives.

Each student working on a farm will be enrolled as a member of the Nova Scotia farm service force and will receive a badge. Those who complete 10 weeks of work will receive a diploma testifying to their contribution to the war effort.

The period of employment has been divided into two sections. The spring section operates from June 1 to the opening of school in September, and the fall section from the closing of school in June to October 20. Pupils who complete at least 10 weeks work in the spring period will be granted their certificates or report cards on submission of an employment form signed by the farmer under whom they worked. This does not apply to Grade XI and XII students who must write their final examinations if they wish to secure a provincial high school certificate. Pupils who serve for at least 10 weeks in the fall period will be excused from attendance until October 20. Students who serve for less than 10 weeks in either period will be granted the same privileges only if they were voluntarily released by the farmer.

No student with a school record below passing grade will be released from school. Only those with high records will be permitted to work for the whole period from June 1 to October 20. School credit is not to be given for time lost in the fall term, and the school and teachers are expected to arrange their programs so as to assist the students in making up lost work .

Mobilization of Labour in Great Britain in the Event of Invasion

As part of the plans for meeting enemy action in the event of invasion in Great Britain a new Defence Regulation has been made with a view to assuring that labour will be immediately available when required for the purpose of doing work needed in connection with operations for meeting enemy action on land.

As outlined in the March issue of the British *Ministry of Labour Gazette* "the Regulation empowers a Regional Commissioner, after consultation with or as a result of representations made by a competent military authority, to declare a Civil Defence region or any part of region to be an Operational Area, if it is necessary to use the labour in it for the purpose of work, either in that area or an adjacent area, in connection with operations for meeting actual or immediately apprehended enemy action on land in the United Kingdom.

"When an area has been thus declared to be an Operational Area, the Minister of Labour and National Service is empowered to direct any persons in that area to perform specified services or to report for work to a representative of the Naval, Military or Air Forces, of a Government Department or local or public authority, or of a public utility undertaking. The only work which people may be required to perform under the Regulation is work which appears to a competent military authority to be needed in connection with operations for meeting enemy action on land. No person may be required under the Regulation to perform combatant duties. Services rendered are to be paid for at a rate not lower than that generally paid for comparable services in the district; and any person who sustains an injury while performing work to which he has been directed will be safeguarded in the matter of compensation either under the Workmen's Compensation Act or under the Personal Injuries (Civilians) Scheme.

"The powers of the Minister to give directions will be exercised on his behalf by duly authorized officers, to be called Operational Area Defence Officers. All National Service Officers automatically become Operational Area Defence Officers, and other such Officers may also be appointed. The directions given by these Officers need not be in writing but may be given in the most convenient way, according to the prevailing circumstances. Only very limited classes of persons are excepted under the Regulation (viz., members of the Armed Forces of the Crown, the Police Forces, whole-time members of Civil Defence Forces and Services, including the National Fire Service, members of The Royal Observer Corps or of the Women's Auxiliary Services), and in the circumstances existing, should invasion take place, it may be necessary to call upon the services of people who, in other circumstances, would be left to pursue their ordinary occupations. Administrative arrangements will, however, be made with a view

to leaving undisturbed persons whose services, even in the emergency conditions which may exist, are required for other essential purposes.

"The penalty on conviction or indictment for an offence against the Regulation will be penal servitude for a term not exceeding ten years or a fine not exceeding £500, or both. Operational Area Defence Officers are given power to arrest without warrant any person in whose case there is reasonable ground for suspecting that he has committed an offence against the Regulation."

Hours of Work, Lost Time and Labour Wastage in Great Britain

The Industrial Health Research Board in Great Britain has recently published its second report entitled *Hours of Work, Lost Time and Labour Wastage.*

This second report of the Board gives the results of an investigation made during the period from the outbreak of war to the end of June, 1941, in 50 munition factories covering approximately 200,000 employees. It deals with the question of hours of work, and with some of the hindrances to maximum output, including lost time, labour wastage and for a few factories, the differential diagnosis of sickness absence.

The general conclusions reached by the Board as a result of their investigations were summarized in the March, 1942, issue of the British *Ministry of Labour Gazette* as follows:

The results of this inquiry show that the time lost by factory workers through sickness, injury and absence without permission, when undisturbed by extraneous factors, varied with the weekly hours of work. It was usually low when the hours of work were less than 60 per week, but increased as the hours increased up to 75. The findings suggest that, over an extended period, the weekly hours of work should generally not exceed 60 to 65 for men and 55 to 60 for women.

In all the groups, the workers were stimulated to an increased output after the collapse of France, and although it was physiologically impossible to maintain the maximum level reached, output in nearly every case has since remained above the previous level. The beneficial effects of a reduction in excessive hours of work, together with the inauguration of staggered holidays, were reflected in an increase in the rate of working afterwards.

Labour wastage varied considerably from one factory to another. Some of the conditions leading to a high rate were the employment of women unaccustomed to factory work, or married women whose domestic responsibilities prevented satisfactory adjustment to factory life; difficulties of shopping and getting suitable meals, and the problem of transport, were important in this connection. For reasons such as these, women on the whole lost more time than men.

The report concludes by saying that when it is remembered that many workers lived far from the factories, and had to face air-raids when travelling to and from work, that some had lost their homes and had to sleep in improvised shelters, and that often they had to wait outside in the cold and rain because of inadequate transport arrangements, the time-keeping of the factory personnel studied deserves high praise.

British Engineering Unions Move Toward Greater Co-operation

A committee of trade union leaders in the engineering industry has been appointed to consider setting up an engineering joint trades movement covering all unions in the engineering industry. The committee was appointed at a conference of representatives of the Amalgamated Engineering Union, the National Union of Foundry Workers and the Confederation of Shipbuilding and Engineering Unions. Since 1937 the A.E.U. and the National Union of Foundry Workers on one side and the Confederation on the other have negotiated separately with employers. The A.E.U. has a membership of 630,000, mainly skilled men. The confederation embraces about 40 unions including a large general workers' union.

U.S. War Man-power Commission Established

In an executive order dated April 18, President Roosevelt established a nine-man War Man-power Commission with Mr. Paul V. McNutt, United States Federal Security Administrator as Chairman.

The Man-power Commission is charged with the duty of bringing about "the most effective mobilization and the maximum use of the nation's man-power for the prosecution of the war."

The eight members and the departments they will represent are: Goldthwaite H. Dorr, War Department; Under-Secretary James V. Forrestal, Navy Department; Secretary Claude R. Wickard, Department of Agriculture; Secretary Frances Perkins, Department of Labour; Donald M. Nelson, War Production Board; General Lewis B. Hershey, Selective Service System; Commissioner Arthur S. Flemming, Civil Service Commission, and Wendell Lund, labour production division of the War Production Board.

In the executive order establishing the Commission, the Chairman, Mr. McNutt, was authorized, after consultation with other members of the Commission, to (1) direct the mobilization and allocation of all American civilians for the supply lines of battle; (2) formulate any legislation that may be necessary for full accomplishment of this purpose and, on the President's approval, recommend it to congress, and (3) take charge of the employment of all civilians in the federal war establishment.

In his first press conference after assuming his new post, Mr. McNutt said that a system of labour priorities is "unavoidable" to make the best possible use of the nation's manpower for war production but that the system would be "on a voluntary and democratic basis," at least for the present. One of the objectives of the system, he said, would be to prevent industries from "hoarding" skilled workers and also to prevent employers from "pirating" labour from one another.

U.S. rulings on labour problems resulting from air raid protection training and volunteer war work

In a statement issued on April 20, the United States Wage and Hour Administrator, Mr. L. Metcalfe Walling, established the following rulings with respect to management-labour problems resulting from air raid protection training and volunteer war work:

"1. Time spent by workers in shelters during a black-out or air raid alarm is not to be counted as hours worked if the employee does nothing for the employer during that period.

"2. Time voluntarily spent by a worker in watchman or air raid protection service for one employer constitutes hours worked for the employer, for which compensation must be paid, unless such service is performed under the control and supervision of a government defense agency or a management labour plant committee.

"3. Overtime must be paid to a worker whose volunteer services as a plant watchman or in air raid protection duty keep him engaged by one employer beyond forty hours a week.

"4. An employee performing any duty during an air raid alarm or a blackout, such as standing by with a sand bucket or acting as a spotter, must be paid during the period involved.

"5. Time spent by employees at plant air raid protection training programs which they attend voluntarily after regular working hours will not ordinarily be considered hours worked.

"6. When an employer donates a day's production at his plant to the Red Cross the employees must be compensated in full for all work done on that day even though they wish to donate their services, except in those few situations in which the Red Cross takes over the plant and supervises the work.

"7. Employees may not waive overtime pay but may accept part of the wages due them in war bonds or stamps."

It was stated that where the problems arising in any "factual situation" have been "covered by the process of collective bargaining", the result will be respected by the Wage and Hour Division.

U.S. shipyard workers give up premium pay

Following the recommendations of the C.I.O. executive board (LABOUR GAZETTE, April, 1942, page 389) that affiliated organizations relinquish the provisions of agreements establishing premium payments for work performed on Saturdays, Sundays and holidays where that work is performed within the limits of the forty-hour work week, 200 delegates from Atlantic Coast, Gulf Coast and Great Lakes locals of the Industrial Union of Marine and Shipbuilding Workers, voted in favour of foregoing these privileges. The delegates represented about 225,000 workers in privately owned shipyards.

The conference also adopted a resolution declaring that "no concessions made by the union in overtime and wages shall be allowed to increase profits of shipbuilding employers or destroy fundamental rights and privileges of workers in industry". Another resolution urged the immediate establishment of labour-management committees in shipyards in which they do not already exist.

Inter-American Conference on Social Security to be held in Santiago-de-Chile

The International Labour Office, Montreal, has announced that at the invitation of the Chilean Government, an Inter-American Conference on Social Security will be held in Santiago-de-Chile from September 10 to 16, 1942. The main objective of the conference is to bring about closer co-operation of all countries of the Western Hemisphere in the field of social security.

The I.L.O. is in charge of the technical preparations of the meeting, and its Acting Director, Mr. E. J. Phelan, plans to attend personally the meetings in Santiago. The Governing Body of the I.L.O. will be represent-

ed by a tripartite delegation. The members will be: for the Governments, Mr. Paul van Zeeland, former Prime Minister of Belgium; for the Employers, Mr. Henry I. Harriman, Chairman of the New England Power Association; for the Workers, Mr. Robert J. Watt, International Representative of the American Federation of Labour.

The Santiago Conference, in which all American countries are invited to participate, will be the continuation of a preliminary meeting in Lima, jointly convened in December, 1940, by the Peruvian Minister of Health and Labour, Dr. Constantino I. Carvallo, and Mr. John G. Winant, then Director of the International Labour Office. Since the first session at which an Inter-American Committee on Social Security was set up with the participation of ten governments, other countries including Canada and Uruguay have decided to join in this new Inter-American solidarity effort.

The war has forced every country to utilize to the utmost its manpower and material resources. Social security services have been called upon to make a supreme effort to preserve and strengthen the health and productive capacity of the working population. The Santiago Conference will furnish a unique opportunity to develop effective collaboration among the social insurance institutions of the Western Hemisphere, and to set up a constructive program of action.

A number of important technical questions will come up for discussion at Santiago. On one, the formulating of a disability insurance program as an integral part of pension insurance, the Chairman of the Social Security Board in Washington, Mr. A. J. Altmeyer, will submit a report. Another item on the agenda will deal with the increasing difficulty for many countries in the Americas in procuring the necessary hospital equipment and basic medical supplies. The extension of social insurance protection to agricultural workers will also be discussed, and the experiments made in this respect by Chile will be of special interest to the delegates to the Conference.

A number of reports are being prepared for the Session. A preliminary paper, which constitutes a general introduction to the problems to be discussed, was published some time ago by the International Labour Office in Montreal under the title *Approaches to Social Security*.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of April three applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From welders and burners in the employ of the Burrard (Vancouver) Dry Dock Company, Limited, Vancouver, B.C., members of Welders' and Burners' Unit No. 4, Amalgamated Building Workers of Canada. Approximately 220 workers were said to be directly affected by the dispute, which arose out of their request for recognition of the union as their bargaining agency. It was stated that the employing company had recently signed an agreement recognizing another union as the sole bargaining agency of all its employees, despite the desire of the majority of the welders and burners not to be represented by the latter union. On April 18 Mr. F. E. Harrison, Western Representative of the Department of Labour, Vancouver, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

2. From beef butchers in the employ of Canada Packers, Limited, Montreal, P.Q. The dispute was said to have arisen out of the discharge of the employees concerned following their refusal to work overtime at regular rates of pay. It was stated that 10 workers were directly affected and 35 indirectly.

3. From employees of the Consumers' Gas Company of Toronto, Toronto, Ont., members of Local 12291, District 50, United Mine Workers of America. Approximately 700 workers were said to be directly affected by the dispute, which had arisen out of the alleged unjust dismissal of a union member. On April 27 Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

Boards Established

On April 22 a Board of Conciliation and Investigation was established to deal with a dispute between the McCord Radiator and Manufacturing Company, Walkerville, Ont., and its employees, members of Local 195, United Automobile Workers of America, and, on the nomination of the employees concerned, Mr. Drummond Wren, Toronto, was appointed a member of the board. The establishment of the board was recommended in a report received on that date from Mr. Louis

Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, who had previously been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (LABOUR GAZETTE, January, 1942, page 10).

On April 22 a Board of Conciliation and Investigation was established to deal with a dispute between Gar Wood Industries of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America, and, on the nomination of the employees concerned, Mr. Drummond Wren, Toronto, was appointed a member of the board. The establishment of the board was recommended in a report received on that date from Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, who had previously been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (LABOUR GAZETTE, March, 1942, page 261).

On April 22 a Board of Conciliation and Investigation was established to deal with a dispute between the Champion Spark Plug Company of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America, and on the nomination of the employees concerned, Mr. Drummond Wren, Toronto, was appointed a member of the board. The establishment of the board was recommended in a report received on April 21 from Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, who had previously been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (LABOUR GAZETTE, April, 1942, page 392).

On April 29 a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Bridge Company, Limited, and employees in its Plant No. 3, Ojibway, Ont., members of Local 195, United Automobile Workers of America (LABOUR GAZETTE, April, 1942, page 391), and, on the nomination of the employees concerned, Mr. Drummond Wren, Toronto, was appointed a member of the board. The establishment of the board was recommended in a report received on April 28 from Mr. Bernard Rose, K.C., Montreal, P.Q., who, on April 21, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

On April 29 a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Steel Corporation, Limited, Ojibway, Ont., and its employees, members of Local 195, United Automobile Workers of America (LABOUR GAZETTE, April, 1942, page 391), and, on the nomination of the employees concerned, Mr. Drummond Wren, Toronto, was appointed a member of the board. The establishment of the board was recommended in a report received on April 28 from Mr. Bernard Rose, K.C., Montreal, P.Q., who, on April 21, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

On April 30 a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists (LABOUR GAZETTE, October, 1941, pages 1186 and 1213, and November, 1941, page 1343). The board was established after protracted efforts by officials of the Department of Labour to effect a mutually satisfactory adjustment of the dispute had proven unsuccessful.

Board Fully Constituted

The constitution of the Board of Conciliation and Investigation established in March to deal with a dispute between the Sorg Pulp Company, Limited, Port Mellon, B.C., and its employees, members of Local 297, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (LABOUR GAZETTE, April, 1942, page 391), was completed during the month of April. The personnel of the board is as follows: His Honour Judge J. O. Wilson, Ashcroft, B.C., chairman, appointed on the joint recommendation of the other two members; P. R. Bengough, Vancouver, B.C., appointed on the nomination of the employees; and J. A. Clark, K.C., also of Vancouver, appointed on the nomination of the employer.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

On April 2, Mr. Bernard Rose, K.C., Montreal, P.Q., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Rolland Paper Company, Limited, and its employees at St. Jerome and Mont Rolland, P.Q., members of Locals 454 and 455, International Brotherhood of Paper Makers, and Local 106, International Brotherhood of Pulp, Sulphite and Paper Mill Workers, in connection with which an application had been received in March for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, April, 1942, page 391).

On April 23 Mr. James Leslie, Chief Conciliation Officer of the Manitoba Department of Labour, Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Western Packing Company of Canada, Limited, Winnipeg, and its employees, members of Packing Plant Employees' Federal Union 92, Trades and Labour Congress of Canada.

Other Reports of Industrial Disputes Inquiry Commissioners

On April 2 a report was received from Mr. Gilbert Jackson, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between Noranda Mines, Limited, Noranda, P.Q., and its employees, members of Federal Miners' Union 22834, American Federation of Labour (Labour Gazette, March, 1942, page 262). The Commissioner reported that the employing company had undertaken to enter into an agreement with a committee of its employees, to be elected by secret ballot under the auspices of the Department of Labour, and that the employees had withdrawn their application for the establishment of a Board of Conciliation and Investigation.

On April 7 a report was received from Mr. H. R. Pettigrove, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Cumberland Railway and Coal Company, Springhill, N.S., and its employees, members of Local 4514, United Mine Workers of America (Labour Gazette, April, 1942, page 392). The Commissioner reported that he was satisfied that the matters in dispute could be satisfactorily adjusted by the interested parties themselves in accordance with the provisions of the collective agreement which is in effect between them.

On April 21 a report was received from Mr. Louis Fine, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Goodyear Tire and Rubber Company of Canada, Limited, Bowmanville, Ont., and its employees, members of Local 189, United Rubber Workers of America (Labour Gazette, April, 1942, page 391). The Commissioner reported that the interested parties, with his assistance, had reached a mutually satisfactory agreement on the matters in dispute and that the employees had withdrawn their application for the establishment of a Board of Conciliation and Investigation.

On April 29 a final report was received from Mr. H. R. Pettigrove, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between T. McAvity and Sons, Limited, Saint John, N.B., and its employees, members of Local 835, International Association of Machinists (Labour Gazette, February, 1942, page 134). The Commissioner reported that the interested parties, with his assistance, had negotiated a collective agreement, which is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue. Subsequently the employees withdrew their application for the establishment of a Board of Conciliation and Investigation.

Other Settlements

On April 15, following mediation by Messrs. F. E. Harrison and G. R. Currie, representatives of the Department of Labour, an agreement was signed by the Pacific Bolt Manufacturing Company, Limited, Vancouver, B.C., and its employees, members of Local 1, Vancouver Metal Workers' Union, Canadian Congress of Labour. The dispute between these parties was to have been referred to arbitration in the event that a settlement was not reached by January 1, 1942 (Labour Gazette, November, 1941, page 1343), but on the joint request of the parties this date was later extended to April 1, 1942. On the latter date, however, it appeared likely that a settlement would be reached through direct negotiations, and recourse to arbitration was considered unnecessary. Particulars concerning the agreement will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

On April 10, following mediation by Messrs. F. E. Harrison and G. R. Currie, representatives of the Department of Labour, an agreement was signed by the Corporation of the City of North Vancouver, B.C., and the unlicensed deck and engine-room crews of the North Vancouver Ferries, members of the Inlandboatmen's Union of the Pacific (Labour Gazette, January, 1942, page 10). Subsequently, the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn. Particulars concerning the agreement will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

On April 22 the Department of Labour was advised that, following a decision by the Ontario Regional War Labour Board as to the amount of wartime cost-of-living bonus to which the employees concerned are entitled, an agreement has been signed by Irvin Air Chute, Limited, Fort Erie, Ont., and its employees, members of the Irvin Air Chute Workers' Association, Canadian Congress of Labour (Labour Gazette, March, 1942, page 261). Subsequently, the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn.

On April 18, following mediation by Mr. Raoul Trepanier, representative of the Department of Labour, an agreement was signed by St. Lawrence Alloys and Metals, Limited, Beauharnois, P.Q., and its employees, members of Alloys and Metals Workers' Federal Union 22613 American Federation of Labour (Labour Gazette, April, 1942, page 391). Subsequently, the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn. Particulars concerning the agreement will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1942

THE following table shows the number of disputes, workers involved and time loss for April, 1942, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*April, 1942	17	6,838	20,403
*March, 1942	18	3,770	23,191
April, 1941	35	20,460	77,036

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While there was a slight decrease in the number of disputes in April and an appreciable decrease in time loss, there was a considerable increase in the number of workers involved, as a result of strikes of shipyard workers at Lauzon, P.Q., carpenters and labourers at Point Edward, N.S., and two strikes of coal miners at Florence, N.S. The other disputes of importance involved coal miners at Joggins, N.S., steel workers at Trenton, N.S., and shipyard workers at Midland, Ont. In March the important disputes involved coal miners at Springhill, N.S., bakers at Montreal, P.Q., automobile parts factory workers at Windsor, Ont., and biscuit factory workers at Vancouver, B.C. In April, 1941, the outstanding disputes were four strikes of coal miners in Nova Scotia and one in New Brunswick, steel rolling mill workers at Montreal, P.Q., and steel car factory workers at Hamilton, Ont.

Two disputes, involving 130 workers, were carried over from March, and 15 commenced during April. Of these 17 disputes, 14 were terminated during the month. Two resulted in favour of the employers involved, four in favour of the workers, while eight were indefinite. At the end of the month, therefore, there were three strikes or lockouts recorded as in progress: namely, coal miners, Inverside, N.S., coal miners, Florence, N.S., and knitting mill workers at Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to three disputes of this nature: truck drivers and helpers, Toronto, Ont., one employer, October 7, 1941 to December 31, 1941; biscuit and candy workers, Vancouver, B.C., March 10, 1942, to April 14, 1942, one employer; bakers, etc., Montreal, P.Q., March 7, 1942, to April 15, 1942, eleven employers.

A stoppage of work in a plywood factory at Vancouver, B.C. on April 17 has been reported but detailed information was not received in time for inclusion in the statistical table. It appears that approximately 250 employees were involved for one hour that day and the dispute was as to union recognition and a cost-of-living bonus. A settlement had not been reached by the end of the month and a similar stoppage occurred early in May regarding the observance of seniority when reducing staff.

A strike of bank clerks for union recognition and increases in pay in several branches of one bank in Montreal on April 30 has been reported but as particulars have not been received it is not included in the statistical table. Newspaper reports indicate that about 300 employees were involved.

A stoppage of work on April 27 by 1,200 coal miners in one colliery at Sydney Mines, N.S., has been reported in the press but it appears that the men stayed away to vote in the federal plebiscite.

A minor dispute involving 100 workers in a shipyard at Lauzon, P.Q., for about one hour on April 18, has been reported. The employees were protesting a delay in making the adjustments following the strike on April 4. After discussion with the management work was resumed.

Disputes in Progress Prior to April

BAKERS, ETC., MONTREAL, P.Q.—This strike of members of the Bakery and Confectionery Workers' International Union of America commenced on March 7 but a number of the strikers were replaced and a reduction in the varieties of bakery products made unnecessary the employment of as many workers. An agreement between the Montreal Bakers'

Association and the National Catholic Unions was in force under the Quebec Collective Agreements Act (LABOUR GAZETTE, March, 1942, page 352, and preceding issues. Negotiations and conciliation with a view to a settlement broke down on March 21, when the employers refused to give preference to strikers returning to work and lay off those who had replaced them. Early in April employment conditions were reported to be no longer affected. A charge of intimidation against two union officials was dismissed about April 20.

BISCUIT AND CONFECTIONERY WORKERS, VANCOUVER, B.C.—In connection with this strike, owing to alleged discrimination against union workers, although there was a union agreement, it is reported that by the middle of April some of those on strike had resumed work and others had been replaced sufficiently to carry on the normal business. The union reported that at the end of March, 43 were still on strike but that later nearly half of this number had obtained employment elsewhere. The establishment has been placed on the "do not patronize" list by the union and the dispute is included in the list of strikes where employment conditions are no longer affected but which have not been called off or declared terminated by the union.

Disputes Commencing During April

COAL MINERS, FLORENCE, N.S.—The strike on April 29 followed a resumption of work on April 28 by the miners who were on strike from April 20 to April 27 against the suspension of nine miners who had quit work an hour early on April 18. The union had decided to resume work pending investigation. The result of this was that the nine men were suspended for six days and the miners again ceased work. At the end of the month the dispute was unterminated but a proposal to refer it to the Joint Adjustment Board in accordance with the agreement was under consideration.

KNITTING MILL WORKERS, TORONTO, ONT.—A number of knitters ceased work on April 29 to obtain an increase in piece rates, indirectly involving 150 other workers. Early in May work was resumed pending investigation and the approval by the Regional War Labour Board of any changes in the wage scale.

CARPENTERS AND LABOURERS, POINT EDWARD, N.S.—The result of this strike was that the Regional War Labour Board raised the labourers' pay from 40 cents per hour to 43½ cents, fixed a cost-of-living bonus and awarded overtime pay for carpenters after 8 hours per day and for labourers beyond 48 hours work per week. The labourers had asked for a ten per cent increase.

SHIPYARD WORKERS, LAUZON, P.Q.—A number of employees ceased work on April 4, closing down the plant for that day, in protest against the classification and rates of pay for some workers in the application of the scale effective under P.C. 629, January 26, 1942, following the report of a Royal Commission on wages in shipyards in Quebec and Ontario. As a result of conciliation by an officer of the Department of Labour and negotiations between representatives of the shipyard operators and the union it was agreed, on April 6, that employees would submit appeals as to their classifications to be dealt with by the management and employees' representatives, those not settled to be arbitrated. Adjustments in the wage scale are to be referred to the National War Labour Board. Work was resumed by some employees on April 7 and by the others on April 9.

SHIPYARD WORKERS, SOREL, P.Q.—A number of the workers, principally welders, ceased work on April 4 in protest against a delay in applying a new wage schedule with higher rates of pay. As a result of concilation by an official of the Department of Labour it was agreed that the new rates would be put into effect at once and work was resumed by some of those on strike on April 7, the others to be reinstated as required.

SHIPYARD WORKERS, MIDLAND AND KINGSTON, ONT.—Employees in one shipyard at Midland ceased work on April 16, following the dismissal of one employee, demanding an investigation into wages and working conditions as applied under P.C. 629, outlined above. A conciliation officer of the Department of Labour advised the workers that the strike was contrary to the provisions of the Industrial Disputes Investigation Act and that the complaints could be dealt with when work was resumed. On April 18 employees in a shipyard at Kingston ceased work in sympathy and a similar strike at Collingwood was threatened. These disputes were referred to the Department of Justice in connection with the apparent violation which had occurred of the Industrial Disputes Investigation Act. On April 21 the management at Midland agreed to reinstate the employee dismissed and to take back all workers without discrimination and being assured that the National War Labour Board would deal with the wage dispute, work was resumed both in Midland and Kingston on April 22. Fourteen men at Midland, members of the employees' committee, and five at Kingston, were reported to have been charged with violation of the provisions of the Industrial Disputes Investigation Act.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to April, 1942.				
MANUFACTURING—				
Vegetable Foods, etc.—				
Bakers, etc., Montreal, P.Q.	11	87	1,000	Commenced March 7; for union recognition and agreement on wages and working conditions; employment conditions no longer affected by the middle of April; in favour of employers.
Biscuit and Candy Workers, Vancouver, B.C.	1	43	500	Commenced March 9; alleged discrimination against union workers on seniority and staff reduction; employment conditions no longer affected by the middle of April; in favour of employer.
(a) Strikes and Lockouts Commencing during April, 1942.				
MINING—				
Coal miners, Joggins, N.S.	1	215	1,200	Commenced April 4; against dismissal of worker; terminated April 12; negotiations; worker reinstated pending investigation; indefinite.
Coal miners, Florence, N.S.	1	727	5,000	Commenced April 20; against suspension of workers; terminated April 27; negotiations; work resumed pending investigation; indefinite.
Coal miners, Inverside, N.S	1	25	150	Commenced April 24; against delay in completion of wash house; unterminated.
Coal miners, Florence, N.S.	1	727	1,454	Commenced April 29; against penalty. suspension of workers following investigation; unterminated.
MANUFACTURING—				
Textiles, Clothing, etc. —				
Clothing factory workers, Winnipeg, Man.	1	102	30	Commenced April 9; for restoration of piece rate wages; terminated April 9; negotiations; work resumed pending reference to Regional War Labour Board; indefinite.
Knitting mill workers, Toronto, Ont.	1	*(a)* 19	38	Commenced April 29; for increased wages; unterminated.
Metal Products—				
Moulders, Brantford, Ont.	1	300	150	Commenced April 1; for restoration of overtime pay; terminated April 1; conciliation (federal); payment for overtime restored; in favour of workers.
Truck factory workers, Windsor, Ont.	1	276	200	Commenced April 3; for recognition of seniority in reducing staff; terminated April 4; negotiations; workers reinstated; in favour of workers.
Machinists, apprentices, etc., Trenton, N.S.	1	98	1,200	Commenced April 3; for increased wages; terminated April 18; negotiations; wage scale to be referred to Regional War Labour Board; indefinite.
Wire factory workers, Ottawa, Ont.	1	10	10	Commenced April 18; for increased wages; terminated April 18; negotiations; wage scale to be referred to Regional War Labour Board; indefinite.
CONSTRUCTION—				
Building and Structures, etc.—				
Carpenters and labourers, Point Edward, N.S.	1	1,100	1,100	Commenced April 14; *re* question of shinglers joining union and increased wages; terminated April 14; negotiations and reference to Regional War Labour Board; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1942*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(b) Strikes and Lockouts Commencing During April, 1942—*Concluded*				
CONSTRUCTION—*Con.*				
Shipbuilding—				
Shipyard workers, Lauzon, P.Q.	1	2,400	6,000	Commenced April 4; *re* classification of workers and wage rates; terminated April 8; conciliation (federal); work resumed pending settlement; indefinite.
Shipyard workers, Sorel, P.Q.	1	57	171	Commenced April 4; for increased wages; terminated April 7; conciliation (federal); in favour of workers.
Shipyard workers, Midland, Ont.	1	352	1,600	Commenced April 16; dismissal of worker, wages and working conditions; terminated April 21; conciliation (federal); worker reinstated; wage scale to be referred to National War Labour Board; indefinite.
Shipyard workers, Kingston, Ont.	1	300	600	Commenced April 18; in sympathy with strikers at Midland, Ont.; terminated April 21; return of workers; indefinite.

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for annual review.

† In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 150 indirectly affected.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in Great Britain and other countries appears elsewhere in this issue.

Great Britain

The number of disputes beginning in February was 55, and 2 were still in progress from the previous month, making a total of 57 disputes in progress during the month; 14,900 workers were involved in all disputes in progress during the month, and the time loss was 28,000 working days.

Of the 55 disputes beginning in February, 7 were over demands for increased wages and 22 over other wage questions, 2 over working hours, 11 over questions respecting the employment of particular classes or persons, and 13 over other questions as to working arrangements. Final settlements were reached during February in 43 disputes, of which 6 were settled in favour of workers, 28 in favour of employers and 9 resulted in compromises; in 11 other disputes, work was resumed pending negotiations.

Two thousand coal miners in county Durham were on strike for two weeks due to a dispute over the coal weighing system. A settlement was reached March 31.

New Zealand

The number of disputes for the year 1941, was 90, involving 15,566 workers, with a time loss of 26,542 working days and an approximate loss in wages of £34,917.

United States

Preliminary figures show the number of strikes beginning in March as 240, involving 65,000, with a time loss of 450,000 man working days.

A strike of 4,500 anthracite coal miners in Pennsylvania was reported on March 13 to have begun owing to a wage dispute. Additional information is not available.

A few hundred by-products coke oven employees in a steel plant at Johnston, Pennsylvania, when on strike, April 28, indirectly affecting between 1,200 and 5,000 others. A settlement was reached April 30, whereby the War Labour Board was to give an early decision on the strikers demand for wage increases.

About 2,000 employees of a manufacturer of communications equipment at South Plainfield, New Jersey, went on strike, April 24 over a demand for increased wages and also over a dispute between two unions. Work was resumed April 27, by about half of the strikers and others were expected to return to work. No later report was noted.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1941

AS usual in periods of greatly increased industrial activity, rising prices and the cost of living, there were increases in the number of industrial disputes and resulting time loss during 1941 in most countries for which figures are presently available.

There was a considerable increase in the number of disputes in Canada with corresponding increases in the number of workers involved and in time loss. In Great Britain increases were not so great. Incomplete figures for Australia indicate an increase in the number of disputes, but a decrease in other comparisons; in New Zealand the figures show somewhat less increases than in Canada; while in the United States figures in all respects increased more than in Canada. However, in the United States and Canada the figures for 1941 were lower than those for 1937 with the exception of the number of Canadian employees involved.

In Canada and the United States the two chief causes of industrial unrest in 1941 were demands for increased wages and union recognition.

Review of Disputes in Canada in 1941

The number of strikes and lockouts recorded for 1941 was 231 involving 87,091 workers and causing time loss of 433,914 man working days as compared with 168 disputes in 1940 involving 60,619 workers with time loss of 266,318 days. The increases were chiefly in coal and gold mining and in manufacturing of metal goods, animal and vegetable foods and in wood working. There were appreciable increases in construction, logging, printing and among hotel and restaurant employees, but there were considerable decreases in time loss for textile and clothing workers, fishermen, rubber workers, boot and shoe workers, in shipbuilding, water transportation and in trade. The figures for 1941, however, were substantially lower than for 1937 when there were 278 disputes involving 71,905 workers with time loss of 886,393 working days, the year most affected by strikes since 1925. Over half of the time loss in 1941 was due to ten strikes involving gold miners at Kirkland Lake, Ontario, automobile parts factory workers at St. Catharines, Ont., coal miners in Nova Scotia (two strikes), aluminum workers at Arvida, P.Q., metal workers at Toronto, Ont., steel rolling mill workers at Montreal, P.Q., cotton factory workers at Milltown, N.B., and steel car factory workers at Milltown N.B. (two strikes). As in 1940 and other recent years a large proportion of the disputes were of short duration, and many involved comparatively small numbers of workers, causing relatively little time loss. The numbers of employers involved was 658 as compared with 894 in 1940 and 630 in 1937.

The predominant cause of strikes as in most of the years was to obtain increases in wages, there being 113 of these altogether, involving 30,362 workers, causing time loss of 147,450 days, but there were 34 disputes for which the principal cause was recognition of union and these involved 11,782 workers causing time loss of 53,390 days, an increase over 1940 in numbers of disputes and workers involved and there was an increase in time loss of over 25 per cent.

Forty per cent of workers involved in all disputes were partially successful, nearly twelve per cent were successful and twenty-eight per cent were unsuccessful. In the other cases the strikes were unterminated or indefinite in result. Of the 231 disputes recorded, 67 were terminated by direct negotiations, 55 by conciliation and 32 by reference under the Industrial Disputes Investigation Act to Boards of Conciliation or to an Industrial Disputes Inquiry Commission provided for by an Order in Council of June 6, 1941, P.C. 4020 (LABOUR GAZETTE, June, 1941, p. 613-4, and October, 1941, p. 1210). Sixty-eight disputes were terminated by return or replacement of workers and two were unterminated at the end of the year.

Compilation of Statistics

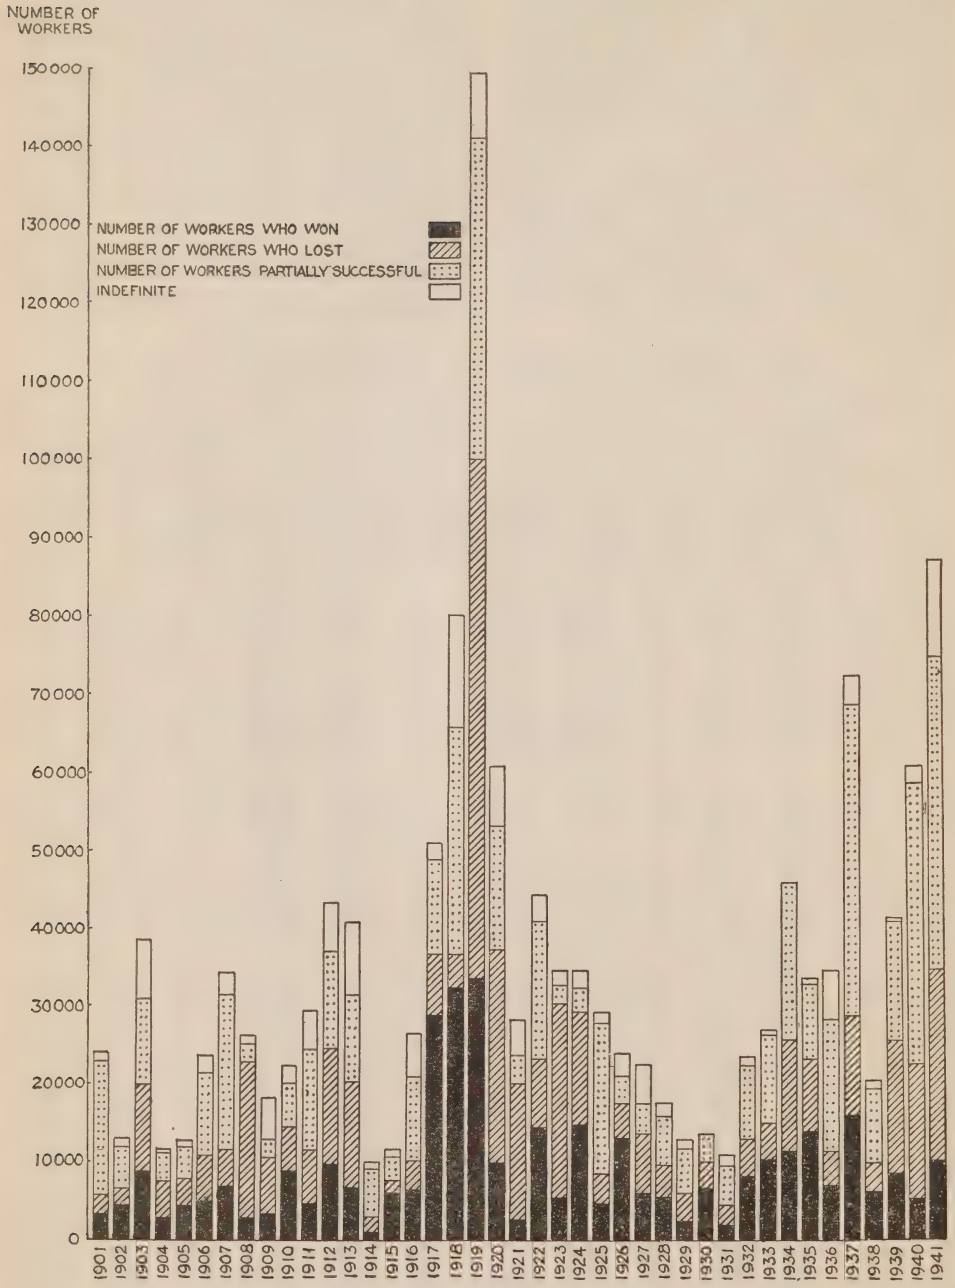
Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada, 1901 to 1912", issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included

summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

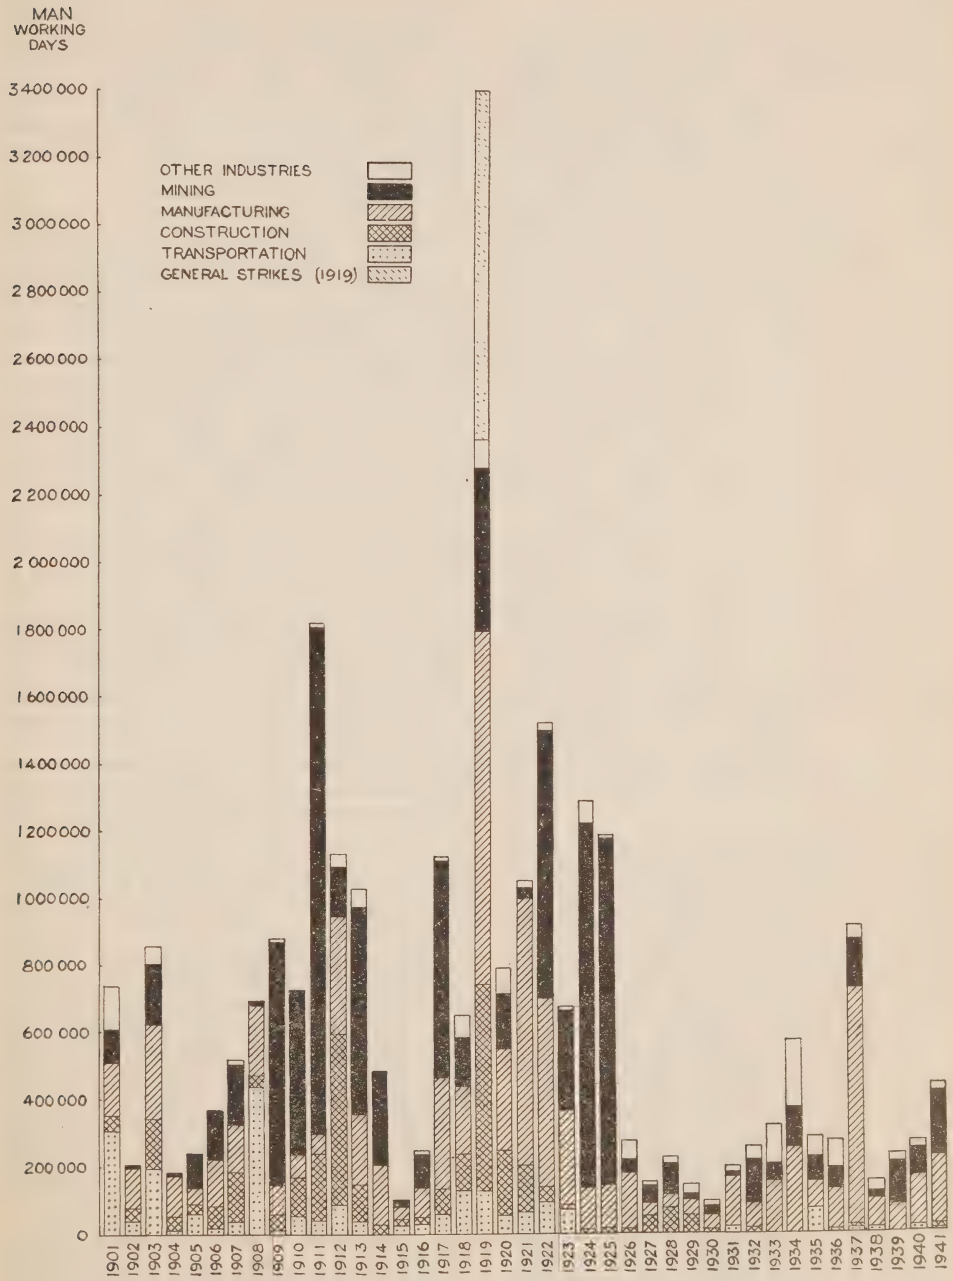
The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1941 there were 26 such disputes, involving 625 employees, causing a time loss of only 131 working days.



In Tables I and X the number of employers involved is given. In disputes which involve

TABLE I—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901–1941



Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days

* In these tables figures for disputes extending over the end of a year are counted more than once.

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF WORKERS INVOLVED EACH YEAR 1901-1941

LOSS IN MAN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR, 1901-1941

large numbers of shops or factories, clothing, fur, furniture, etc., or building construction jobs, logging and fishing operations, etc., only the approximate number of employers is usually reported.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known and not replaced. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information was available, the numbers indirectly affected, if important, have been shown in footnotes to Table X, which is a detailed list of the strikes and lockouts during the year. The workers indirectly affected in each dispute are those in the establishment who are unable to continue work because of the stoppage but not participating in the dispute.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes, previously recorded, as to which information has been received indicating that employment conditions are no longer affected but which the unions or organizations concerned have not yet declared terminated. Such disputes are listed in a paragraph in the monthly article on strikes and lockouts for a period up to one year after their removal from the table of current strikes.

Information is available as to the following dispute of this nature still on record at the end of 1941: truck drivers and helpers, Toronto, Ontario, one employer, October 7, 1941, to December 31, 1941. Information is also available as to the following disputes carried over in the list from 1940 but removed during 1941:—hotel chambermaids, Montreal, P.Q., one employer, July 19, 1940, to September 15, 1940, lapsed September 15, 1941; taxicab drivers, Toronto, Ont., one employer, September 23, 1940, to November 30, 1940, called off September 2, 1941; packing plant employees, Toronto, Ont., one employer, September 24, 1940, to November 30, 1940, called off October 22, 1941; dairy employees, Toronto, Ont., one employer, October 8 to November 30, 1940, lapsed November 30, 1941; and truck drivers (highway), Toronto, Ontario, etc., one employer, November 11, 1940, to January 31, 1941, work obtained elsewhere by March 31, 1941. The following dispute also occurred during 1941: Seamen, Great Lakes and St. Lawrence River, five employers, April 11-17, 1941, to May 31, 1941, called off July 5, 1941.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932, in 1934 and again in 1937, 1939, 1940 and 1941, time loss was greater than in the other years since 1925. In 1919 the time loss due to general strikes is shown separately. In Manufacturing considerable time loss occurred in metal manufacturing in 1919, 1920, 1937 and 1941; in clothing (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925, 1926, 1930, 1931, 1932, 1933, 1934, 1936, 1937, 1939 and in 1940; in cigar manufacturing in 1901; in printing in 1921, 1922, 1923 and 1924; and in sawmilling in 1931 and 1932. In Construction time loss was considerable in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. In Other Industries considerable time loss was due to strikes of fishermen in 1901, to strikes of loggers in 1919, 1920, 1933, 1934 and 1935.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940 and 1941, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

Analysis of Statistics, 1941

Table I is a summary of the principal statistics for the period for which the record has been compiled, beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over at

the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903, 1929 and 1934. The approximate number of employers involved in all disputes as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II, an analysis by workers involved, shows that over one hundred disputes involved less than 100 workers and a total of 4,589 workers, causing time loss of 21,557 days, while 35·9 per cent of the disputes involved between 100 and 500 workers, a total of 17,474 and causing 99,536 days time loss or 23 per cent of the total for the year. There were 16 disputes which involved over 1,000 workers, a total of 48,401, causing time loss of 246,410 days which was 56·8 per cent of the time loss for the year, proportionately almost the same as in 1940.

Table III, an analysis by time loss, shows that 171 out of 231 disputes caused time loss of less than 1,000 days and less than ten per cent of the total for the year, while 40 per cent of the total was due to strikes which caused between 1,000 and 10,000 days time loss. Four strikes resulted in time loss between 10,000 and 50,000 days, a total of 87,875 days or 20·3 per cent of the time loss for all disputes, while two disputes caused 50,000 or more days time loss, nearly 30 per cent of the total.

Table IV, an analysis by duration, shows that 153 disputes, 66 per cent of all, lasted less than 5 days but involved over 55,000 workers and caused nearly 25 per cent of the total time loss for the year. Twenty-one disputes lasted over 15 days, of which only 8 extended over 25 days.

Table V, an analysis by provinces, shows that the greatest time loss was in Ontario, with 55·1 per cent of the total due to 107 disputes and over 30 per cent of workers involved in all disputes. The time loss in Nova Scotia was 100,810 days, which was 23·2 per cent of the total, due to 44 disputes which involved 45 per cent of the workers affected by all disputes. In Quebec the time loss was 51,833 days, only 12 per cent of the total in all provinces and for the other provinces the figures were comparatively small except in New Brunswick, Alberta and British Columbia each of which had between two and four per cent of the total time loss for Canada.

Table VI, an analysis by industries, shows that 47·4 per cent of the time loss for the year was in manufacturing, chiefly in the metal products industries. Mining had 44·2 per cent of the total time loss, 191,689 days, of which 78,000 days was due to a strike of gold miners at Kirkland Lake, Ont., for union recognition which was not terminated until February 11, 1942, in favour of the employers, and caused additional time loss of 58,000 days in 1942. One strike of coal miners in Nova Scotia caused time loss of 42,000 days and another, the result of the first, caused 9,500 days time loss. This dispute followed the signing of an agreement by the union executive officers without a reference to a vote of the miners, as was the custom, though in accordance with the union constitution. This was followed by a "slow down" in work by a very large percentage of the miners from July to September when the cost of living bonus was increased. There was considerable time loss in the textile and clothing industries but much less than in 1940. The time loss in construction which includes shipbuilding was considerably greater than in recent years but only three per cent of the total for all industries. In work included under "Service" there was considerable time loss, 13,399 days, due chiefly to strikes of beverage dispensers and hotel and restaurant employees.

Table VII, an analysis by causes and results, shows that the predominant cause as is usual was to obtain increases in wages, there being 89 strikes involving 23,976 workers for this cause alone and 24 strikes for increases in wages with other changes. Nearly half of these were partially successful, nearly 20 per cent were successful but 30 per cent were unsuccessful. No disputes were recorded as due to changes in hours alone. The cause next in importance was for recognition of union, there being 34, nearly twice as many as in 1940, and the time loss due to such strikes was 126,334 days as compared with 100,696 in 1940, and these strikes involved 60 per cent of all workers who struck for this cause. Most of these disputes resulted in agreements with committees of employees. In seven cases the strikers were successful but in six were unsuccessful. There were eight strikes for the "closed union shop", employment of union members only, and five of these were successful. There were 14 other disputes as to other union questions.

Table VIII, an analysis by industries and methods of settlement, shows that 67 out of the 231 disputes recorded were settled by direct negotiations between the parties, 55 by conciliation and 32 by reference under the Industrial Disputes Investigation Act. Twenty-seven of these last were in manufacturing, 17 being in metal industries, and 4 in con-

struction of which three were in shipbuilding. In nineteen of the disputes settled under the Industrial Disputes Investigation Act and various Orders in Council the resumption of work had been brought about by conciliation. Fifty-four disputes were terminated by return of workers, in some cases pending negotiations, most of these being in coal mining, and in other cases without securing their demands. In some of these cases some of the workers had been replaced. Fourteen disputes were recorded as terminated by replacement of workers, this being the deciding factor, but in most of these there was also a return of workers not replaced. Two of the disputes were unterminated.

Table IX gives an analysis by months for the past eleven years, showing the number of disputes commencing during the month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. Prior to 1930 the largest number of disputes was usually in May or June due chiefly to strikes in the building trades but since 1930 there have been comparatively few disputes in the construction industry. During 1941 the number of disputes increased in April to 35 and was not reduced materially until October but the number of workers involved was highest in May and in July. At the end of the year the number on strike was unusually high owing to the strike of gold miners at Kirkland Lake, Ont., and this accounted for the large time loss in November and December although it had been high since April, the highest figure being in September. In 1940, time loss was highest in April, May and June, and the number of workers involved was highest in April.

Table X is the list of strikes and lockouts in existence during the year with details as to causes, results, dates, etc.

TABLE II.—STRIKES AND LOCKOUTS, 1941, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Workers involved		Time loss	
	Number	Per cent of total	Number	Per cent of total	Man working days	Per cent of total

Strikes and Lockouts in Other Countries During 1941

The accompanying tables give the principal figures as to strikes and lockouts in certain other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man-working days. All countries for which this information was available were included in the tables published in the LABOUR GAZETTE, March, 1940, page 234. The countries included in the tables published below are restricted to those for which additional information was received since March, 1940. Throughout the year the latest available figures (including those from annual reports) for each country are given in a monthly article in the LABOUR GAZETTE.

Methods of compilation of trade dispute statistics vary greatly with various countries. In some countries figures as to strikes and lockouts are published separately, but, where possible, they have been included together in the table here given. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they were not parties; but exact information on this point is not always given. In the table given herewith the column showing the numbers of employees involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned.

Footnotes to the table indicate the nature of the statistics with reference to the above points.

Many countries publish statistics dealing with trade disputes only once each year or even less frequently, the figures being issued in some cases after an interval of some length. Most countries revise their figures when additional facts are brought to light, even though such revisions may necessitate changes in statistics published a considerable time previously.

In most cases the statistics dealing with disputes in other countries, published in the LABOUR GAZETTE are obtained from official publications of the countries concerned.

Very few countries with the exception of Canada, the United Kingdom and the United States give particulars as to individual strikes in their official publications. Where information as to such disputes appears in this annual article or the monthly article in the LABOUR GAZETTE, it is obtained chiefly from newspaper reports. It should be noted, in this connection, that the amount of material on labour matters appearing in the press is dependent upon its relative importance in comparison with other events occurring at any given time.

Great Britain and Northern Ireland

The number of disputes which began during 1941 was 1,241, as compared with 922 in the previous year. The number of workers involved in all disputes in progress during the year was 359,800, and the time loss 1,075,000 man working days.

The great majority of disputes during 1941 involved only small numbers of workers and there were no disputes of outstanding importance. Among the principal disputes during the year were the strikes of 25,000 apprentices in the engineering and shipbuilding industries in certain districts in Scotland and at Belfast, Barrow and Manchester, which occurred during different periods between the end of February and the first week of April, and resulted in a national agreement governing the wages of apprentice engineers.

Australia

During the early part of September about 40,000 textile workers in Victoria and New South Wales were on strike in protest against the wages award made by the Arbitration Court. Work was resumed September 18 and the dispute referred again to the Arbitration Court the terms of whose decision, reached October 3, were not published.

United States

Preliminary estimates show the number of strikes beginning during the year 1941, as 4,212, with 2,355,815 workers involved in disputes beginning during the year and a time loss of 22,923,374 working days for all disputes in progress during the year.

The most important disputes during the year occurred in the coal mining and metal manufacturing industries, including shipbuilding.

Following failure of the bituminous mine operators and the union to agree on terms of renewal of their agreement in the Appalachian area, about 318,000 miners went on

strike April 1, for increased wage rates and the elimination of the 40 cents per day differential between northern and southern fields. The stoppage continued until the end of April, when through the intervention of the President of the United States and the National Defense Mediation Board work was resumed by the majority of miners on April 30 and May 1, and by the others within a few days. The increase of $1 per day in the basic day wage was granted, and later the southern operators agreed to a further increase of 40 cents per day, making the basic day rate for both northern and southern fields $7 per day, with a signed agreement for two years.

Bituminous coal miners in Alabama, numbering about 20,000, were on strike from September 2 to 7 for a new agreement based on the Appalachian agreement; work was resumed on the latter date and the dispute referred to the National Defense Mediation Board. Another stoppage occurred from October 20 to 24, when an agreement was reached based on the findings of this board, providing for an increase of 25 cents per day in addition to an increase of $1 granted under the temporary agreement last May; other questions were also settled.

Among the bituminous coal miners on strike during April were those engaged in "captive mines", that is mines owned and operated by steel companies for their own use. These miners returned to work under a verbal agreement to concur with the Appalachian agreement except for the union shop clause and negotiations on this point continued without success during the summer until September 15, when a strike was called and 43,000 miners stopped work in "captive mines" in Pennsylvania, West Virginia and Kentucky. At the request of the National Defense Mediation Board, work was resumed September 22, for a 30-day truce pending settlement by the board. Proposals of the board were not accepted and another stoppage occurred October 27, involving 53,000 miners, including this time 8,000 from the captive mines of Alabama who continued on strike after the settlement of the strike in the other mines of this state on October 24. Following conferences of the parties, with the board and the President of the United States, work was again resumed October 30. A majority decision of the Board recommended the adoption of the Appalachian agreement without the union shop clause. This decision was rejected by the union and the strike resumed November 17, and many sympathetic strikes took place at commercial mines as well, involving an estimated number of 115,000 miners. On November 24, at the request of the President of the United States, work was resumed and the dispute referred to a special arbitration board, whose decision would be binding. On December 7, a majority decision of this board awarded the union shop in the captive mines.

A one-day strike of 90,000 anthracite coal miners in eastern Pennsylvania on May 19 resulted in a compromise agreement providing for wage increases and a vacation with pay. Between September 9 and October 8, about 25,000 anthracite coal miners in the same district were involved in a strike in protest against payment of increased union dues.

Plants of the International Harvester Company (a farm equipment manufacturing company) in Illinois and Indiana were involved in a strike which began January 17 for recognition of the union as a bargaining agency and other demands. Within a few weeks after the strike had started at one plant, the other plants with more than 15,000 workers in all became involved. Work was not resumed until March 31, pending a recommedation for settlement of the dispute by the National Defense Mediation Board. Final settlement had not yet been reached in January, 1942.

At West Allis (near Milwaukee), Wisconsin, 7,500 employees of the Allis Chalmers Company (an engineering plant) were on strike from January 22 to April 7 over alleged favoritism toward non-union men and members of another union. Through the National Defense Mediation Board the agreement reached provided for an impartial referee to arbitrate all disputes including discrimination or favoritism.

A strike in one department of the Ford Motor Company plant in Detroit on April 1, extended the next day to the whole plant involving 85,000 workers and later indirectly involved 40,000 in other plants of the company which were closed due to lack of materials from the first plant. The strikers demanded union recognition and no discrimination against union members. The National Labour Relations Board ordered an election and work was resumed April 11. The election held May 21 showed a large majority for the union, the United Automobile Workers of America. Negotiations took place, and on June 20 an agreement was signed providing for a union shop, check-off of union dues, arrangement for settlement of disputes by a shop steward system and joint appeal boards, wages at least equal to the highest in the industry, and other provisions.

Machinists in certain shipyards in the San Francisco district in California, were on strike

from May 10 to June 26, involving at one time about 10,000 workers. The strikers were seeking wage rates and overtime pay higher than in the master agreement for all shipyards on the Pacific Coast, but returned to work on its terms.

When a shipbuilding company at Kearny, New Jersey, refused to accept the recommendation of the National Defense Mediation Board for a "maintenance of union membership" clause in the agreement, 15,000 employees went on strike August 6. On August 23, the President of the United States issued an executive order that the plant be taken over and operated by the Navy Department, and work was resumed.

In an attempt to have a separate union for their own work recognized rather than being required under closed shop agreements to maintain membership in more than one of several trade unions, welders in Pacific Coast shipyards began a strike on October 22, which later involved 12,500 workers including those indirectly affected. Some welders in metal working shops and in construction work also took part in the strike. After appeals by the Office of Production Management, the welders voted November 5 to return to work pending a conference for settlement of the dispute. A plan suggested by the Office of Production Management in conference with the various trade unions but without the welders, who refused to attend due to alleged discrimination against some of them, was rejected and a national welders' strike called for December 9. This threatened strike was called off after the outbreak of war on December 7. The dispute was not, however, settled and two further strikes of several hundred welders occurred, one on December 20 and the other on January 30, 1942, in shipbuilding and aircraft factories on the Pacific Coast; in both cases, work was resumed within a few days.

(f) Directly and indirectly involved. (g) It is not stated whether or not employees indirectly involved are included. (h) Preliminary figures. (i) Strikes only.

POST WAR PLANNING IN THE UNITED STATES

IN the April edition of *Personnel Journal,* published by the Personnel Research Federation, New York, an article by George B. Galloway gives the digest of a survey made by the Twentieth Century Fund of post war planning in the United States. The report from which the digest is made describes the work of a number of commercial firms and trade associations actively making plans for the post war period.

In the report, which is entitled *Post War Planning in the United States,* the Twentieth Century Fund, New York, describes the work of 35 government agencies, 33 private agencies, 11 industrial and financial organizations, 16 trade associations and 7 rail, highway, water and other transportation agencies now actively engaged in post war planning research and says that further investigation undoubtedly would reveal more. Much of the research is still in the planning stage. The report catalogues the leading agencies, lists and classifies the projects each has under way and includes a bibliography of current books, pamphlets and articles on post war planning.

Government Agencies Planning

Among the major federal government agencies covered in the report is the Board of Economic Warfare. The Board is now the central agency in the federal government for post war planning in the international field. It is intensively engaged in dealing with the economic phases of the war itself, such as the allocation of lend-lease materials and the export of foodstuffs to friendly nations, etc. The Board even in this work is giving thought to long-run implications for the world after the war.

In the United States Department of Labour, a Post War Division has been established in the Bureau of Labour Statistics. The Division is studying such subjects as current and post war labour problems of communities having a large expansion of war industries; general dislocations in the labour market likely to follow the end of the war; size, age, composition and training of the nation's labour force; how workers spend their money; and potential future demand for various types of consumer goods.

The Division of Research and Statistics under the Board of Governors of the Federal Reserve System has retained Professor Alvin H. Hansen of Harvard University as special economic adviser. Subjects being studied include probable changes in American trade resulting from post war developments; possibilities of federal and state aid in stimulating urban redevelopment and housing; federal-state local fiscal relationships; and international economic relations, particularly in connection with the Joint Economic Committees of Canada and the United States.

These and other agencies are actively studying post war problems in the United States and their activities are reviewed in the report.

COMPULSORY REGISTRATION OF MALE PERSONS IN CANADA

Order Announcing Registration Every Two Weeks of all Unemployed Men Between Ages of 17 to 69 Inclusive

ON May 20, the Director of National Selective Service announced at a press conference that in order to meet the increasing man-power needs of industry, and to enable the placing of every employable man to work as soon as possible, an order had been issued by the Minister of Labour making it compulsory for every unemployed man between the ages of 17 to 69, inclusive, to register for employment. The order became effective on June 1, and all men unemployed on or after May 31 must register within one week of becoming unemployed and must renew their registrations at least once every two weeks during any period of unemployment. Men living within five miles of a city, town or village in which an Employment and Claims office of the Unemployment Insurance Commission is situated will register in person at such an office. Men living outside such areas will register in person at the nearest Post Office.

"We are approaching a tight labour situation, and labour shortages are reported from many sections of Canada," Mr. Little declared. "Yet we are aware that there are still unemployed men in this country. At present we do not know how many unemployed there are, how many of them are employable, what occupations they are fitted to undertake, nor where they are located. We must know these things to handle the task of fitting the men to jobs.

"It is unreasonable to allow an uncontrolled condition to force women into industry while bread-winners are unemployed. Housing, transportation and other factors enter into the problem of directing men to employment, but such factors cannot be considered except in the light of what manpower is available and where it is available.

"To win this war, every bit of available strength has to be utilized. We recognize that many men who have sincerely wanted to work have not been able to get work, and we intend to end that condition as fast as our information and the machinery of administration can permit it. But we must know something about men before we can put them in jobs. We also must have co-operation from the employers in telling us where the jobs are going to be—anticipating their needs and telling us. We earnestly request employers to list their current and future needs with the Employment offices.

"We also recognize that there are men who are able to work, who are in areas where work is available, but who have not voluntarily taken steps to fit themselves into the picture. When we know who they are, what they can do and where they can be most useful, we believe they will recognize their responsibilities.

"In this respect, it is important to realize that *to be unemployed does not mean to be without income or without support.* Men who are *not gainfully employed or occupied,* no matter what their status or condition otherwise, must register. Gainful employment, while Canada is at war, means that every man who is able to work should be working at a job which contributes to the winning of the war, even if it means working at a job which merely releases another man for heavier war tasks. There are able-bodied men in Canada who have not needed to seek employment because of fortunate circumstances, or who have been able to retire while still physically fit. As it becomes necessary, employment will seek such men out, and we believe they will assume their share of Canada's job as we are able to reveal vacancies which they can fill.

"We intend that those who need work should get it first. We also plan to have everybody doing his fair share when he is needed. That is our objective, to be attained as quickly as the need arises and as rapidly as our facilities and information permit us to achieve it.

"The registration of unemployed men will be an important step toward completion of a much-needed inventory of our manpower. On March 31 the registration of employed, through employers, was completed, and this information is rapidly being analysed. No registration of unemployed was taken at that time, but with the forthcoming registration we will have now a picture of manpower, both employed and unemployed. By registering as they become unemployed, men will record the change of status on the records of the Employment offices, providing information of available unemployed in every district and giving the Employment office a record of labour changes in each place of employment. As it becomes necessary to provide greater guidance to labour's movements, or to obtain faster or more exact recording of labour changes, additional provision will be made."

Text of Order

Under authority of Order-in-Council P.C. 1445 of 2nd March, 1942, the Minister of Labour hereby makes the following order:

1. Every male person shall register for employment when, after May 31, 1942, he is unemployed or not gainfully occupied, unless

(*a*) he has not reached his sixteenth birthday, or

(*b*) he has reached his seventieth birthday, or

(*c*) he is a student in regular day-time attendance at a school, college or university, or

(*d*) he is confined in an asylum for the insane or the feeble-minded, or a penitentiary, or prison, or a hospital or a home for the aged and the infirm, or

(*e*) he is subject to the provisions of the Essential Work (Scientific and Technical Personnel) Regulations, 1942.

2. Every male person required by this Order to register for employment shall register within one week after May 31, 1942, or within one week after the date on which he becomes unemployed after May 31, 1942.

3. Registration for employment shall be made on forms to be provided by the Unemployment Insurance Commission and shall be made

(*a*) at an Employment and Claims Office of the Unemployment Insurance Commission, if the person lives either in, or within five miles of, a city or town in which there is such an office, or

(*b*) at the nearest post office, if he does not live in, or within five miles of, a city or town in which there is an Employment and Claims Office of the Unemployment Insurance Commission.

4. Every male person required by this Order to register for employment shall renew his registration at least once every two weeks while he remains unemployed or not gainfully occupied on forms to be provided by the Unemployment Insurance Commission.

Dated at Ottawa this nineteenth day of May, nineteen hundred and forty-two.

(*Sgd.*) Humphrey Mitchell,
Minister of Labour.

NATIONAL SELECTIVE SERVICE RULINGS IN REGARD TO RESTRICTED OCCUPATIONS

First of Series of Explanatory Notes Issued by National Selective Service

THE National Selective Service, Department of Labour, has issued the first of a series (Circular No. 1) of Explanatory Notes, dealing with interpretations arising out of P.C. 2250 *re* "Restricted Occupations". The following is the text of the circular:

RE: ORDER IN COUNCIL 2250 "RESTRICTED OCCUPATIONS"

1. *Twenty-one to Thirty Age Group*

If a man who is over twenty years of age and under thirty-one years of age and is either

(*a*) Single, or

(*b*) Widower without dependents, or

(*c*) Married subsequent to July 15, 1940,

applies for a permit, careful consideration is necessary, unless

(i) there are special meritorious circumstances, or

(ii) the man is going into an occupation to further the war effort, or

(iii) he is going into service which, in the judgment of the selective service officer is essential even though classified as a restricted occupation, or

(iv) there are domestic circumstances (such as a sick dependent) or other compassionate considerations which justify issuance of a permit.

No permit is needed if such a man presents a certificate of discharge from full time service in any branch of the armed forces, or presents proof that he has been examined for service in any branch of the armed forces and has been found medically unfit.

2. *Work after School Hours*

No permit will be needed for young men entering into casual employment where the work is done after school attendance or on school holidays during school sessions providing the person engaging in such work attends day school during the time he is not working and providing the person in question is under twenty-one years of age.

3. *Students' Summer Holidays*

In respect to students seeking employment during the summer holidays, the policy to be followed will be that of giving permits limited to the duration of the school, college or university holidays. If these young men are needed for munitions work they should be directed to such work rather than be allowed to enter a restricted occupation by permit. A permit should not be given to a student who normally follows agricultural pursuits (for example, a farmer's son) if he is needed on the farm. If the refusal of a permit to a student would mean that he would be prevented from securing employment the permit should be issued.

4. *Subsidiary Employment*

No permit will be needed for men engaging in a restricted occupation if such work is subsidiary to their regular occupation, provided it is carried on as part-time work.

5. *Casual Employment*

For the present no permit will be required covering casual employment, which is irregular, in a restricted occupation for a period not exceeding three days in any one calendar week for the same employer.

6. *Age Limits under Seventeen or over Forty-five (2-1A)*

This sub-paragraph provides for the presentation of a birth certificate or other evidence that the person is not of the ages of seventeen years to forty-five years inclusive.

In interpreting this clause follow the rule that the person must prove that he has not reached his seventeenth birthday or has reached his forty-sixth birthday.

7. *Rejection because of Physical Unfitness*

Medical rejection from any branch of the three armed forces will be considered as warranting the acceptance of restricted occupation, even though the standard of fitness may not be the same in all three forces.

8. *Permits Limited to Six Months*

For the present, as a general rule, permits should not be granted for a period of more than six months.

9. *Refusals of Permits must be in Writing*

Where an applicant is refused a permit the refusal should be in writing with a clear statement of the applicant's right to appeal.

10. *Local Labour Situation—Special Consideration*

The labour situation existing should be a factor in considering all applications. If an application is made by a person to enter a restricted employment and it is clear that his services are not at the time required in essential industry, a permit should be granted fairly freely especially if he is outside the twenty-one to thirty age group mentioned above.

11. *No Job Available—Special Consideration*

No permit should be issued to an applicant who does not establish that there is a job open for him. However, where the personal circumstances indicate that the applicant would be granted a permit if a job were available, the Local National Selective Service Officer may provide the applicant with a letter stating that if he obtains a job within thirty days of the date of the letter a permit will be issued to him.

12. *Applications for Permits*

Order in Council P.C. 2250 provides that the person to apply for a permit (see paragraph 2, sub-paragraph 2) shall be the person who wishes to enter into restricted employment. However, where it is not reasonably convenient for the employee to do so, or in cases of mass employment, applications may be taken from the employer on behalf of the employee. An advantage of having the employee apply is that contact with him would give the Selective Service Officer a better opportunity to determine whether he could be used to better advantage elsewhere.

13. *War Industries—Special Consideration*

The schedule lists a number of occupations which are restricted in all industries including war industries. However, where it is clearly established by the prospective employer that the industry is engaged to a considerable extent on war work and the services of a male in one of the occupations listed are urgently required, a permit may be granted.

14. *Provincial Government Employees*

Permits are not required for employment by provincial governments.

15. *Transfers within the same Organization*

An employer will be allowed to transfer any employee who was in his employ on March 23, 1942, from one occupation to another within his own organization, providing he is not being transferred permanently (or for a considerable period) from a non-restricted to a restricted occupation.

16. *Wholesale or Retail Trade (See Schedule)*

"Occupation in wholesale or retail trade" shall be interpreted to mean employment in enterprises engaged mainly in the handling of products already manufactured or processed.

For example:

(*a*) The manufacture of ice is not a restricted occupation except in so far as provided in Section 1 of the schedule.

(*b*) *Drug Stores.*—All the staff of drug stores are considered to be engaged in retail trade, and consequently permits are required. Further consideration may be given to the question of *apprentice* or *graduate pharmacists* but, in the meantime, permits must be obtained but shall be granted freely.

(*c*) The dairy industry and ice cream manufacturing plants are not restricted industries except as provided in Section 1 of the schedule.

(*d*) Milling of flour and allied products is not a restricted industry.

(*e*) Line Grain Elevators are not a restricted industry.

17. *Manufacture of Clothing*

Textile Products.—The manufacture of clothing is considered to be a restricted occupation in the production of textile products.

18. *Flax Processing Mills*

Local mills processing flax in the primary stages which do not manufacture linens shall not be considered as restricted industries.

19. *Cost Clerks and Student Accountants (See Schedule)*

Cost Clerks and Student Accountants are considered as being included in Section 1 of the Schedule and, consequently, must obtain a permit before accepting employment in that occupation.

20. *Entertainers and Musicians*

In this field it is necessary to distinguish between contracts for service as an employee and contracts for service as an independent contractor. Very often the member of an orchestra is an employee of the leader, but the leader makes engagements as an independent contractor. Permits are required for the acceptance of employment as an employee in this field, but not for the acceptance of engagements as an independent contractor. *For example:* A salaried violinist cannot transfer from one orchestra to another without a permit, but the orchestra leader does not need a permit to transfer the whole orchestra from one hotel to another.

Most concert artists are not employees.

Many troublesome cases in this field may be settled by reference to rulings 4 and 5 above, dealing with supplementary and casual employment.

21. *Employment through Unions*

Certain unions (such as the Typographical Union, for example) have agreements with employers that men, when required, will be obtained from the Union, and in order to give service certain men are carried on the union strength and are sent out on call to different employers as substitutes.

Local Selective Service Officers should establish close working arrangement with unions having such agreements in order that the terms of the agreements may be carried out.

Unions should be encouraged to keep on file with the office a correct list of substitutes and if a satisfactory understanding is reached permits may be issued to such men for a stated period permitting their employment by various employers with whom the union has agreements.

22. *Special Groups of Certain Racial Origin*

Certain groups, because of racial origin, are not eligible for enlistment and further have difficulty in obtaining employment in war industries. In such cases permits allowing them to enter restricted occupations are quite justifiable.

EMPLOYMENT OF WOMEN IN FACTORY WORK IN THE UNITED STATES

THE National Industrial Conference Board Inc., New York, has published a report (Studies in Personnel Policy, No. 41) entitled *Women in Factory Work.* As stated in the introduction to the report the fundamental cause of the study and report is the condition revealed in two statements.

(1) Well over 1,000,000 new workers will have to be added to the labour force during 1942.

(2) It is expected that approximately 200,000 men will be drafted into military service every month.

New workers, the report declared, will have to come very largely from three groups—men over 45, boys under 20, and women. Many of the older men who are not already employed are unsuited physically or temperamentally for modern factory employment, while boys will be liable for military service as soon as they become 20. The attitude of whatever governmental agency is finally charged with responsibility for the mobilization of labour will, no doubt, be similar to that expressed by General Lewis B. Hershey, Director of Selective Service, who recently said, "The Selective Service System will expect a gradual but constant substitution (in industry) of women for men who are fit to fight." It thus seems evident that both the condition of the labour market and governmental policy will dictate that a majority of the new workers needed will be women.

The attempt has been made in the study to present all the information at present available which will be of interest or assistance to executives who plan to employ women in factory work that previously has been performed by men. British and German experience, in so far as it is applicable, is drawn upon, and the opinions and experiences of qualified operating and personnel men in the United States, gathered through interviews and plant visits, are reported. Because only a relatively small number of women have yet been employed for war work in the United States and the draft has not cut very deeply, most of the persons interviewed felt that their opinions and procedures were subject to radical alteration, the report states.

The report is divided into fourteen main sections under the following headings: Planning for Women's Employment; Mobilization of Women in Great Britain; Types of Work Women Can and Cannot Do; Recruitment; Selection; Orientation; Training—British Experience; Supervision; Compensation; Absenteeism; Hours of Work and Fatigue; Clothing; Structural Alterations; The Problem of Mixed Sexes.

WARTIME SHIPPING IN CANADA

Situation in Regard to Speeding Ship Construction and Servicing of Ships

SINCE the construction and servicing of ships is of first importance in the war effort of the United Nations, and since Canada's part in that program is of major proportions and developing rapidly, the factors that enter into the shipping situation in this country are reviewed herewith.

The shipbuilding industry in Canada falls into three geographical divisions, viz.—the Pacific Coast, the Atlantic Coast and the St. Lawrence and Great Lakes system. Since in each of these areas there is a different set of factors and conditions governing the local situation, these are dealt with separately.

Continuous Operation of Pacific Coast Yards

On the Pacific Coast, after considerable negotiation by the Minister of Labour, there was agreement by all the managements and nine of the eleven unions involved that in order to speed up the production of ships work would proceed in seven-day continuous operations on the basis of a formula submitted by the Minister. The formula agreed upon was in three shifts arranged as follows:

Shift	Daily Hours worked	Time Off for meals	Time Worked per week	Time Paid for
First	8 hours	30 min.	48 hrs.	50 hrs.
Second	7 hours 40 m.	20 min.	46 "	54 "
Third	7 hours 10 m.	20 "	43 "	54 "

Each man to work six shifts per week, having one day's rest in seven.

The background of the ship-yard situation on the Pacific Coast was summarized in the following statement issued by the Department of Labour in a press release on May 15:

In order to speed up the production of ships, it was suggested that the ship-yards of the Pacific Coast should work continuously. The matter was discussed with the Minister of Labour who developed a three-shift formula for a seven day continuous operation in the yards, the men to have one day's rest in seven.

The Minister made a flying trip to the Coast and conferred with the managements and the unions involved. All of the managements agreed to the plan and the representatives of the unions promised to discuss the formula with their memberships.

The Minister was advised that nine of the eleven unions had accepted the plan, but that the Machinists' and Blacksmiths' Locals had rejected it. These two unions have less than 1,000 members combined out of approximately 15,000 employees in the ship yards.

The Minister exerted every effort to persuade these two unions to accept the formula agreed upon by the majority of the employees and the nine unions appealed to the Machinists and Blacksmiths to conform with the plan but they still declined. The Minister then sent an appeal by wire, which was endorsed by the nine unions, and which was published in the Vancouver Press. The Machinists and Blacksmiths still refused to comply.

The managements began to implement the Minister's formula, but on the first week end of operations under the plan the Machinists and Blacksmiths absented themselves from the yards, while members of all the other unions came to work.

The Minister then conferred in Ottawa with G. S. Lyons, International Vice-President of the Machinists' Association who had just returned from the Pacific Coast and was fully apprised of the existing conditions. Mr. Lyons, in a letter to the machinists' local, urged its members to co-operate with the Government in its effort to speed up the production of ships.

But on the following week-end the Machinists and Blacksmiths again absented themselves from work.

The plan or formula (set forth above) was then implemented by Order in Council, which confirmed the agreements arranged by the Minister between the ship yard managemnt and the nine unions.

While the nine unions that accepted the plan are faithfully carrying it out, they protested its enforcement by Order in Council, on the grounds that such a procedure was arbitrary and coercive and informed the Minister to this effect. On May 14, the Minister replied by wire, as follows:

"It is fully appreciated that successful operation of continuous production plan in shipyards depends on harmonious co-operation between Government, management and labour. Every effort has been made over many weeks to bring about desired results by this method. The general recognition of conditions and

of the necessity for continuous operation by such a large proportion of workers of various organiaztions interested and their co-operation in bringing it about by the signing of supplementary agreements is acknowledged and fully appreciated. The Order in Council would probably not have been passed if the unions representing the great majority of employees had not voluntarily agreed upon the plan it embodies. The order merely confirms the agreements of these unions and asserts that the minority shall accept such agreements. I am sure you agree that Government measures expressing the will of the majority are not arbitrary or coercive but are the procedures of all free peoples. Rule by minorities means the kind of dictatorship we are now fighting. If you can suggest any other democratic method of giving effect to the expressed wishes of the majority of employees will be glad to consider it but their wishes must prevail and the increased production of ships involved must be secured."

Servicing of Ships at Halifax

As a result of personal investigation by the Minister of Labour, and to speed up the "turn around" of ships at Halifax, the Government has appointed certain officers whose responsibility will be to supervise and utilize to the best advantage the port labour supply.

To achieve this objective a Controller of Loading Operations has been appointed to co-ordinate the activities of all the agencies involved—the railroads, the shipping companies, the Harbours Board, the British Ministry of War Transport and the longshoremen. This official is Mr. V. C. MacDonald, K.C., Dean of the Law School of Dalhousie University, who for approximately one year, has been acting as port arbitrator.

He will be assisted by Mr. John J. Greene, president of the Eastern Canada Stevedoring Company, Montreal, who has been loaned by the company to act as Port Loading Superintendent, where it is considered that his long experience in practical shipping matters will be of great assistance in advising the Controller of Loading Operations on the technical phases of the problem.

In addition, provision is made for the reorganizing of the method of hiring longshoremen. In future, longshoremen will not be hired individually at the docks, but all longshoremen will be assigned to fixed gangs. There will be a Central Dispatching Agency which will be notified in advance as to the number of gangs required, and this agency will assign the gangs to the job. The dispatching agency will be responsible for arranging a rotation of work and allocation of day and night work. Members of the gangs are required to report for work on the call of the gang boss or suffer the loss of their dock permits.

Mr. Charles W. Train, of Vancouver, has been appointed a special consultant to the Minister of Labour for the purpose of organizing this central dispatching agency on the basis of his experience in a similar system in operation on the Pacific Coast.

The assignment of the men to the docks and the details of the operation of the dispatching agency will be worked out with the advice of a joint committee representing the longshoremen's union and the shipping and stevedoring companies.

The provision for re-organizing loading and unloading operations and the basis of the plan is authorized by two Orders in Council. The first (P.C. 1758 of March 9, 1942), directs the Minister of Labour "to prepare for the consideration of the Governor General in Council a wartime plan for the re-organization of ship loading and unloading operations in the Port of Halifax."

Basis of Plan

Accordingly, the Minister proceeded as directed, and the basis of the plan is contained in P.C. 3511 of April 30, 1942, as follows:

Whereas the Minister of Labour reports that as directed by Order in Council P.C. 1758 of 9th March, 1942, and after consultation with representatives of the shipping and stevedoring companies and the Longshoremen's Union of the Port of Halifax, he has prepared a wartime plan for the re-organization of ship loading and unloading operations in that Port embodying in substance the basic elements set forth in said Order in Council with such variations as now seem expedient to him; and that it is desirable that this wartime plan be incorporated in a new Order in Council;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under authority of the War Measures Act, (Chapter 206 of the Revised Statutes of Canada, 1927) and of the National Resources Mobilization Act, 1940 (Chapter 13 of the Statutes of Canada, 1940), is pleased to make and doth hereby make the following order;

ORDER

1. There shall be a Controller of Loading Operations; a Port Loading Superintendent; and a Chief Dispatcher for the Port of Halifax, N.S., to be appointed by the Governor in Council.
2. It shall be the duty of the Controller of Loading Operations (hereinafter referred to as the Controller) to co-ordinate the activi-

ties of all persons, companies, organizations, associations and agencies directly or indirectly engaged or concerned in ship loading and unloading operations in the Port of Halifax, and to carry out all duties assigned to him by the Governor in Council by this or subsequent Orders for the purpose of improving the wartime efficiency of such operations.

3. The Controller shall have, exercise and enjoy all powers and authority necessary for the effective execution of the duties and the attainment of the objects in this Order mentioned; and in particular (but not so as to restrict the generality of the foregoing) the Controller shall have power and authority):

(*a*) To give directions to, and to make orders, and decisions binding upon, all persons, companies, organizations, associations and agencies engaged or concerned in ship loading or unloading at the Port of Halifax with respect to all matters, whether general or special, other than wage rates, affecting working and hiring conditions, practices and methods in connection with ship loading and unloading operations.

(*b*) To decide any dispute arising in connection with such conditions, practices and methods, or generally concerning any matters arising out of the provisions of this Order or any direction, order, or decision given or made by the Controller, his decision thereon shall be final and conclusive.

(*c*) To supervise and control the establishment, operation and administration of the Central Dispatching Agency and to give directions, make orders and decide questions relating to same.

(*d*) To require applicants for employment as longshoremen to register in such manner as he may prescribe and to classify such applicants and determine their eligibility for employment; to prescribe what shall constitute an active longshoreman for hiring purposes; from time to time to prescribe the eligibility for employment of different classes of longshoremen; to determine the total number of longshoremen of all classes required from time to time for the efficient operation of the Port and to arrange for their recruitment and orderly employment through the Central Dispatching Agency.

(*e*) When he deems it necessary, to require the Longshoremen's Association of Halifax to admit to temporary membership such classes of men and in such numbers and for such periods as he may direct or order; provided that men so admitted to temporary membership shall have no right to be regarded as Union members beyond the period for which they were so admitted; and also provided that during such period such men shall have no share in or right to benefit from the funds of the Association.

(*f*) To give directions and make orders as to when and under what circumstances ships shall be worked at night or upon holidays.

(*g*) To appoint such Advisory Committees as he may deem desirable to advise him upon any general or special phases of loading operations.

(*h*) To recommend to the Minister of Labour any major changes or improvements in ship loading methods and facilities which may seem expedient.

(*i*) Subject to the approval of the Governor in Council, to appoint such other officers, clerks, and other assistants and acquire such office facilities as may be necessary to carry out the duties assigned to him.

4. In the exercise of his powers and authority under this Order the Controller shall not be restricted by the terms of any contract or agreement made between the shipping and stevedoring companies and the Halifax Longshoremen's Union other than as the same may relate to wage rates.

5. The Controller shall appoint a Personnel Committe ecomposed of the Port Loading Superintendent, the Chief Dispatching Officer and representatives of the Shipping and Stevedoring Companies and of the Halifax Longshoremen's Union to divide the present active working personnel of the Port into gangs, and to allot bosses to such gangs; and from time to time as directed by the Controller to revise such division and allocation.

6. The Port Loading Superintendent shall inspect and supervise the loading operations of the Port as a whole, advise the Controller and other loading agencies upon technical loading problems, and generally perform such duties as the Controller may assign to him.

7. The Chief Dispatcher, under the supervision and control of the Controller, shall administer the Central Dispatching Agency and generally perform such duties as the Controller may assign to him.

8. The present practice popularly known as "have-a-look" is hereby abolished and longshoremen shall be called out only at regular calling hours (except in the case of emergency) and in all cases when men have reported for work upon proper call they shall be paid as from the regular hour of call.

9. Whenever a stevedoring or shipping company is loading a number of ships simultaneously it shall have the loading operations of the same under the general supervision of an experienced man of the rank of Assistant Marine Superintendent so far as practicable, in the ratio of one for every three ships.

10. All longshoremen who have heretofore been admitted to temporary membership in the Halifax Longshoremen's Union under Order in Council P.C. 744 of 13th January, 1941, and all longshoremen who may hereafter be admitted to temporary membership in the Union pursuant to the direction or order of the Controller, shall enjoy complete equality with permanent members of the Union as to hiring and working privileges.

11. The Controller may extend the period of the temporary membership in the Union now enjoyed by the longshoremen who have heretofore been admitted into the Union pursuant to said Order in Council P.C. 744 provided the Controller deems this desirable as preliminary to the establishment of the central dispatching agency and the new method of hiring referred to in Section 12 of this Order.

12. The present system of daily hiring of individuals working at the site of the work is hereby abolished and there shall be substituted therefor a new system of hiring which, subject to such alterations as the Controller may deem expedient, shall embody the following principles.

(*a*) A central dispatching agency shall be established and shall be administered by the Chief Dispatcher;

(*b*) The present active working personnel of the Port shall be divided into fixed gangs with named gang bosses;

(*c*) Longshoremen shall hereafter be hired in gangs and exclusively through the dispatching agency;

(*d*) Companies desiring gangs shall notify the dispatching agency at certain fixed hours of the number of gangs required;

(*e*) The dispatching agency shall keep a roster of gang bosses and shall be responsible for notifying the requisite number of gang bosses upon receipt of such notification from any company;

(*f*) Upon receipt of such notice from the dispatching agency each gang boss shall be responsible for producing his gang at the required time and place; and the members of each gang when notified of work by their gang boss must appear for the work in question under penalty of loss of their dock permits, unless within three days of such failure to appear they give to the Chief Dispatcher a satisfactory explanation therefor;

(*g*) The dispatching agency shall call out gangs by some system of rotation designed to ensure equality of work, provided that if the Controller considers it feasible the stevedoring companies shall each be given the privilege of calling for a certain number of specified gangs;

(*h*) Gangs shall be required to work at night when called upon through their bosses by the dispatching agency to do so; but the dispatching agency shall adopt some system of rotation of day and night work designed to ensure the equitable distribution of day and night work so far as practicable.

13. The Controller and any person acting for or under his authority shall not be liable to any person for anything done or omitted in the exercise or purported exercise of any power or authority from time to time vested in the Controller.

14. All persons, companies, organizations, associations, or agencies directly or indirectly engaged or concerned in shiploading operations in the Port shall in all matters act upon and in accordance with the directions, orders and decisions given or made by the Controller under this Order.

15. It shall be the duty of the Controller to maintain a record of the suspension pursuant to this Order of any existing condition of work established by practice or agreement, and such condition shall be fully restored, if the employees so desire, on the termination of the present war.

16. Any person, company, organization, association or agency as aforesaid who, or which, contravenes or fails to comply with any provision of this Order or with any direction, order or decision given or made by the Controller under this Order shall be guilty of an offence and shall be liable on Summary Conviction to a fine not exceeding $500 or to imprisonment for a term not exceeding three months or to both such fine and such imprisonment.

17. The Controller, the Port Loading Superintendent, the Chief Dispatcher and such other officers, clerks and assistants as may be appointed hereunder shall receive such remuneration as the Governor in Council may fix.

18. Order in Council P.C. 1758 of 9th March, 1942, and Order in Council P.C. 744 of 13th January, 1941, are hereby revoked; and Order in Council P.C. 1706 of 10th March, 1941, so far as it refers to the appointment of an Arbitrator is hereby revoked.

19. This Order shall be effective on the first day of May, 1942, except Section 1 hereof which shall be effective as of April 13, 1942, and Section 12 hereof which shall be effective upon written notice by the Controller to the Longshoremen's Association of Halifax and the Chairman of the Shipping Committee of the Halifax Board of Trade.

Order 629 Re Wage Rates in Ontario and Quebec Shipyards

Following reports of Boards of Conciliation and Investigation established to deal with disputes between the Morton Engineering and Dry Dock Company, Limited, Quebec, and employees (LABOUR GAZETTE, December, 1941, pp. 1468-73, and January 1942, pp. 12-15), and a report of the Royal Commission appointed to investigate labour conditions in Quebec and Ontario shipyards (LABOUR GAZETTE, January, 1942, pp. 17-27), the Department of Labour took action to give effect to the recommendations contained in these reports at the same time adhering as closely as possible to the principles of P.C. 8253. After investigations and conferences with interested parties concerned, P.C. 629 of January 26, 1942, was passed fixing the basic rates of wages in all Quebec and Ontario shipyards except those located in Port Arthur and Toronto where the rates had already been agreed upon for the duration of the war and necessary adjustments had been made in regard to cost of living bonuses.

The adjustment of wage rates made under P.C. 629 was designed to stabilize rates in the shipyards of the two provinces subject to any adjustments which might be directed by the National War Labour Board following application to that body by interested employers or employees.

The Royal Commission had made recommendations designed to bring about an equitable relationship between rates of wages of employees in Quebec and Ontario shipyards and those in other industries. This was done after conferences with interested parties. Order in Council P.C. 629 was passed, as the recommendations contained in the Royal Commission report dealt with conditions ante-dating P.C. 8253 of November 15. At the time P.C. 629 was passed it was understood that any fur-

ther adjustments in wage rates in shipyards would necessarily have to be made through application to the National War Labour Board, and already an adjustment has been made in the wage rates of labourers and helpers in three Ontario shipyards, namely at Kingston, Midland and Collingwood. The text of Order in Council P.C. 629 follows:

TEXT OF ORDER

Whereas the Minister of Labour reports that a plan for the stabilization of basic wage rates in certain shipyards has been developed on the basis of the recommendations of the Royal Commission on Shipbuilding in the Provinces of Quebec and Ontario, the reports of certain boards of conciliation and investigation under the Industrial Disputes Investigation Act and various submissions from employers and employees concerned;

And whereas the Minister further reports that in the interest of industrial peace it is desirable that immediate effect should be given to the aforesaid plan;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour and under the authority of the War Measures Act (Chapter 206, Revised Statutes of Canada, 1927), is pleased to order and doth hereby order as follows:—

1. The basic wage rates for mechanics and the cost of living bonus for all employees in the shipyards, specified in the statement attached hereto, shall be adjusted as of the dates and in the amounts indicated in each case;

2. The Minister of Labour is hereby authorized to adjust the basic wage rates for other classifications of employees of the aforesaid shipyards in such relationship to the basic wage rates specified for mechanics and in such amounts as in his opinion, having regard to all the circumstances, are fair and reasonable.

ADJUSTMENTS IN BASIC WAGE RATES AND COST OF LIVING BONUS FOR EMPLOYEES IN CERTAIN SHIPYARDS IN THE PROVINCES OF QUEBEC AND ONTARIO

1. Kingston Shipbuilding Company, Limited

(*a*) *Basic Wage Rate:* The basic rate of 70 cents per hour for mechanics is increased to 75 cents per hour, effective on the first pay period in January, 1942; the differential of 5 cents per hour to be paid retroactively to all employees on the pay-roll at January 1, 1942, for all time worked since October 1, 1941.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing on the first pay period in January, 1942, replacing the present bonus of 3 cents per hour.

2. Collingwood Shipyards, Limited

(*a*) *Basic Wage Rate:* The basic rate of 70 cents per hour for mechanics is increased to 75 cents per hour, effective on the first pay period in January, 1942: the differential of 5 cents per hour to be paid retroactively to all employees on the pay-roll at January 1, 1942, for all time worked since October 1, 1941.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing on the first pay period in January, 1942.

3. Midland Shipbuilding Company, Limited

(*a*) *Basic Wage Rate:* The basic rate of 70 cents per hour for mechanics is increased to 75 cents per hour, effective on the first pay period in January, 1942: the differential of 5 cents per hour to be paid retroactively to all employees on the pay-roll at January 1, 1942, for all time worked since October 1, 1941.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing on the first pay period in January, 1942.

4. Toronto Shipbuilding Company, Limited

(*a*) *Basic Wage Rate:* The present basic rates are to be maintained for all classifications of employees.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing on the first pay period in January, 1942, replacing the present bonus of $1.25 per week.

5. Port Arthur Shipbuilding Company, Limited

(*a*) *Basic Wage Rate:* The present basic rates are to be maintained for all classifications of employees.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing on the first pay period in January, 1942. In accordance with the provisions of the existing union agreement, all employees on the pay-roll at January 1, 1942, shall receive retroactive payment of a cost of living bonus of 90 cents per week for all time worked between November 15, 1941, and the first pay period in January, 1942.

6. Canadian Vickers, Limited (Marine Division)

(*a*) *Basic Wage Rate:* The basic wage rate of 73 cents per hour for mechanics is to be increased to 80 cents per hour, effective on the first pay period in January, 1942.

(*b*) *Cost of Living Bonus:* A weekly bonus of $2.10 is to be paid commencing on the first pay period in January, 1942. This is the amount of the bonus being paid in the Engineering Division of the company.

7. Davie Shipbuilding & Repairing Company, Limited

(*a*) *Basic Wage Rate:* The basic wage rate of 63 cents per hour for mechanics is increased to 70 cents per hour, effective on the first pay period in January, 1942.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid, commencing on the first pay period in January, 1942, replacing the present bonus of 4 cents per hour.

8. Geo. T. Davie and Sons

(*a*) *Basic Wage Rate:* The basic wage rate of 63 cents per hour for mechanics is increased to 70 cents per hour, effective on the first pay period in January, 1942.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid, commencing on the first pay period in January, 1942, replacing the present bonus of 4 cents per hour.

9. Marine Industries, Limited

(*a*) *Basic Wage Rate:* The basic wage rate of 58 cents per hour for mechanics is increased

to 70 cents per hour, effective on the first pay period in January, 1942.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing the first pay period in January, 1942, replacing the present bonus of 2 cents per hour.

10. Morton Engineering and Dry Dock Company, Limited

(*a*) *Basic Wage Rate:* The basic wage rate of 58 cents per hour for mechanics is increased to 70 cents per hour, effective on the first pay period in January, 1942. Those employees to whom the recommendation of the two Boards of Conciliation and Investigation apply and who are on the payroll of the company at January 1, 1942, shall receive back pay of 5 cents per hour for all time worked between June 24, 1941, and the first pay period in January, 1942.

(*b*) *Cost of Living Bonus:* A weekly bonus of $1.50 is to be paid commencing the first pay period in January, 1942, replacing the present bonus of 2 cents per hour. All employees on the pay-roll at January 1, 1942, shall receive a retroactive payment of 2 cents per hour cost of living bonus for all time worked between September 1, 1941, and the first pay period in January, 1942.

These provisions will accord to the employees in this yard the rates of pay and cost of living bonus received by the employees of the other two shipyards in the Quebec area for the period since June 24, 1941.

Future Adjustments in Cost of Living Bonus

The amount of the cost of living bonus indicated for each shipyard shall remain unchanged until further adjustments are required on or about February 15, 1942, and quarterly thereafter in accordance with the provisions of Order in Council P.C. 8253.

Classifications and Wage Rates

Order in Council P.C. 629, dated the 26th day of January, 1942, fixes basic wage rates for mechanics in designated shipyards in the Provinces of Quebec and Ontario. Section 2 of the Order authorizes the Minister of Labour to adjust the basic wage rates for other classifications of employees "in such relationship to the basic wage rates specified for mechanics and in such amounts as, in his opinion, having regard to all the circumstances, are fair and reasonable."

Representatives of the Department of Labour have visited these shipyards in which the basic rates for mechanics have been changed, interviewing the management and representatives of employees in each yard for the purpose of gathering information on which adjustments in the rates for other classifications could be made.

After careful consideration of existing practice and the recommendations made by the management and employees' representatives in each shipyard, together with the recommendations of the Royal Commission, it has been decided to adjust basic wage rates for classifications other than mechanics in accordance with the following schedule:

Classification	Morton Engineering & Dry Dock Co., Ltd., Davis Shipbuilding & Repairing Co., Ltd., Geo. T. Davie & Sons, Marine Industries, Ltd.	Kingston, Midland & Collingwood Shipyards	Canadian Vickers, Ltd., Montreal, P.Q.
Apprentice (see attached statement)	$0.25–$0.60	$0.30–$0.65	$0.35–$0.70
Bolter-up	.53	.56	.60
Burner and Cutter	.63	.68	.73
Crane Operator, overhead, electric	.56	.60	.65
Crane Operator, locomotive, steam	.60	.65	.70
Driller—air drill and plate shop	.65	.70	.75
Erector—assembler or plate hanger	.53	.56	.60
Helper—general	.45	.47	50
Helper—slab	.50	.53	.56
Labourer	.40	.42	.45
Learner or Improver (see attached statement)	.45 & up	.47 & up	.50 & up
Linerman—liner fitter	.56	.60	.65
Machine Operator (m.s repetitive production operations)	.56	.60	65
Painter—finish	.65	.70	.75
Painter—hull and red lead	.45	.47	.50
Punch and shear operator—plate shop	.56	.60	.65
Reamer and countersinker	.53	.56	.60
Rigger	.60	.65	.70
Rivet—holder-on	.60	.65	.70
Rivet—heater	.56	.60	.65
Rivet—passer over 18 years	.35	.38	.41
Rivet—passer under 18 years	.30	.33	.36
Slinger or hooker-on	.50	.53	.56
Stager or stage builder	.53	.56	.60

These new basic rates are effective from the beginning of the first pay period in January, 1942. Retroactive payments of the differentials between these new rates and the old basic rates for each classification shall be made in the same manner and for the same periods as specified for each shipyard by Order in Council P.C. 629.

Statement Regarding Apprentices and Learners Apprentices—

The employment of apprentices in the shipyards of Quebec and Ontario during the war period shall be subject to the following conditions:—

(1) Apprentices shall be between the ages of 16 and 21 years, and in each case there shall be a written contract covering a period of four years.

(2) Apprentices may be employed only in designated trades to include: anglesmith, blacksmith, boilermaker, carpenter and joiner, coppersmith, electrician, loftsman, machinist, millwright, moulder, patternmaker, pipefitter, plater, sheet metal worker, shipwright, slabman or furnaceman, and any others to be agreed on by the management and employees subject to approval by the National War Labour Board.

(3) The wage rates for apprentices shall be increased every six calendar months, subject to conditions laid down in the contract or indenture. The minimum rates for apprentices in the various yards shall be as follows:—

	Morton Engineering & Dry Dock Co., Ltd. Davie Shipbuilding & Repairing Co., Ltd., Geo. T. Davis & Sons, Marine Industries, Quebec	Kingston, Midland and Collingwood, Ontario	Canadian Vickers, Ltd., Toronto and Port Arthur
	$	$	$
Starting rate	.25	.30	.35
After six months	.30	.35	.40
After one year	.35	.40	.45
After 18 months	.40	.45	.50
After two years	.45	.50	.55
After 30 months	.50	.55	.60
After three years	.55	.60	.65
After 42 months	.60	.65	.70

"Learners" or "Improvers"—

As a war measure, it is necessary to develop skilled workers in the shortest possible time, and it is recommended that in each shipyard labourers and unskilled helpers who show promise should be selected by the management and classified as learners (or improvers) with a view to developing them into skilled operators and specialists as rapidly as circumstances permit.

It is also recommended that new employees who have had previous experience or training in the type of work for which they are hired but who are not sufficiently skilled or experienced to be designated as mechanics, shall be immediately classified as learners or improvers and given a rate of pay higher than the commencement rate and commensurate with their experience and earning capacity. All employees classified as learners (or improvers) shall be paid in accordance with the following scheme:—

(*a*) Labourers and Helpers transferred to the classification of learners (or improvers) and having less than six months' experience in the class of work performed, shall be paid the rate for helpers during the first six months after the transfer unless recommended for an increase by the foreman or person in charge of the work or department after a shorter period.

(*b*) Every learner or improver shall receive increases of five cents per hour after each six months' service until his rate of pay equals the full basic wage rate for mechanics. This upgrading by periodic increases in pay may be accelerated in exceptional cases, but may not be retarded. Where it is found that the learner (or improver) is not making satisfactory progress he may be reduced to the classification of helper and paid accordingly.

(*c*) Upgrading of learners (or improvers) in accordance with this scheme shall not be regarded as increases in basic wage rates subject to approval of the National War Labour Board.

Wage Rates in Halifax Yards

P.C. 3471 of April 28, 1942, was passed to overcome difficulties and discontent arising among workers in Halfax yards due to a disparity in the wage rates for mechanics in the Halifax Dockyards and Halifax Shipyards. In the Halifax Dockyards mechanics received an 85 cent rate without a cost-of-living bonus, while in the Halifax Shipyards mechanics received a 78 cent rate plus a cost-of-living bonus.

After conferences with the interested parties and investigation by the Department of Labour, the rates were equalized in the two yards by Order in Council P.C. 3471.

Consideration is being given to possible adjustments which will bring the rates of employees at the Saint John Dry Dock into conformity with those now made effective in the Halifax yards. The text of Order in Council 3471 follows:

TEXT OF ORDER

WHEREAS disparity in the wage rates of shipyard employees in the Maritime Provinces has been a cause of unrest tending to decrease efficiency;

AND WHEREAS the Minister of Labour reports that a plan for stabilizing basic wage rates paid employees of H.M.C. Dockyard, Halifax, and

Halifax Shipyards, Limited, has been developed, after a study of the wage rates now paid and the working conditions in effect therein; and

That the management of the Halifax Shipyards Limited and the Industrial Union of Marine and Shipbuilding Workers of Canada, Local No. 1, Halifax, N.S., have agreed upon the aforesaid plan;

AND WHEREAS the Minister of Labour further reports, with the concurrence of the Minister of National Defence for Naval Services with respect to H.M.C. Dockyard, Halifax, and of the Minister of Munitions and Supply with respect to the Halifax Shipyards, Limited, that in the interest of industrial peace it is desirable that immediate effect should be given to the aforesaid plan;

NOW, THEREFORE, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under the authority of the War Measures Act (Chapter 206, Revised Statutes of Canada, 1927), is pleased to order and doth hereby order that the basic wage rates and cost-of-living bonus for mechanics and other employees of H.M.C. Dockyard, Halifax, and of Halifax Shipyards, Limited, shall be those prescribed in the appended Schedules Nos. I and II respectively.

years of age and female workers employed at basic wage rates of less than $25 per week shall be paid a cost-of-living bonus equal to 5 per cent of the basic weekly wage rates. The cost-of-living bonuses so provided shall be redetermined quarterly for the first payroll period beginning on or after the 15th day of the months of May, August, November and February, in accordance with the provisions of section 12 of Order in Council P.C. 8253 and amendments.

Preservation of Existing Rates

Employees in any classification whose rates of pay on the effective date of this schedule were in excess of those set forth in the schedule shall not suffer a reduction in wage rates as a result of its application, but all others must be paid at the rates prescribed for their respective classifications.

Any employee who continues to receive a higher wage rate than that prescribed by the schedule for his classification shall not receive a cost-of-living bonus until such time as the amount of the bonus payment reduced to an equivalent hourly rate exceeds the difference between the wage rate actually received and the basic wage rate prescribed by this schedule.

Cost-of-Living Bonus

Effective with the first payroll period beginning on or after February 15, 1942, all adult male employees and all other employees employed at basic wage rates of $25 or more per week shall be paid a cost-of-living bonus of $1.25 per week. Male employees under 21 years of age and female workers employed at basic wage rates of less than $25 per week shall be paid a cost-of-living bonus equal to 5 per cent of the basic weekly wage rates. The cost-of-living bonuses so provided shall be redetermined quarterly for the first payroll period beginning on or after the 15th day of the months of May, August, November and February, in accordance with the provisions of section 12 of Order in Council P.C. 8253 and amendments.

DECISIONS OF NATIONAL WAR LABOUR BOARD

ON May 13, the Minister of Labour, Hon. Humphrey Mitchell, in reply to a question, tabled a statement in the House of Commons summarizing the decisions made by the National War Labour Board since its establishment. To May 6, the National War Labour Board had received 152 applications, and decisions had been rendered in 96 cases, of which 75 had relation to wage adjustments and cost of living bonuses.

The following is the text of the statement submitted by the Minister:

(*a*) From the establishment of the National War Labour Board to May 6, 1942, one hundred and fifty-two applications have been received. Findings have been made in ninety-six cases, of which seventy-five had relation to wage increases or cost of living bonuses.

(*b*) Of the seventy-five applications dealt with, fifty-three were initiated by employers, ten by employees and twelve were made jointly by employer and employee representatives. Of these applications, sixty-three had relation to wage increases and twelve to cost of living bonuses.

(*c*) Wage increases, in whole or in part, were granted in forty applications filed by employers, in nine applications originating with employees and in twelve cases in which joint applications were made. In one employer and one employee application in connection with wage changes, application was refused.

(*d*) Cost of living bonus payments or adjustments were authorized in ten applications originating with employers. In one application for relief from payment of additional bonus, the application was granted under the provisions of section 13 of the order. In one application by employer to adjust bonuses, permission was refused.

(*e*) In twenty-six applications filed by employers, in one by employees and in seven jointly made, wage increases were approved under the terms of clause 11 (2) of the wartime wages and cost of living bonus order, as existing wages were found to be low compared with wage rates generally prevailing for similar work in like localities.

In two applications by employees wages were found to be low, and the board ordered an increase in some occupational classifications and wages were found to be not low in other classifications.

In two applications by employees wage increases were granted in part but not in full in order to bring basic rates into conformity with rates generally prevailing for similar work in like localities.

In one employee application an increase in basic wage rate was refused by reason of the fact that existing rates were not low within the meaning of the order.

In one application filed by an employer proposed changes in salesmen's compensation plan was refused, the proposal being regarded as being in contravention of the provisions of the order.

In fourteen applications (with the concurrence on behalf of employees affected in cases where collective agreements were in effect), wage increases were approved in order that basic wages to employees in Canada might conform with rates being paid by the applicant companies to employees in comparable employment outside of Canada under collective agreements or by established practice. In all such cases it was stipulated that cost of living bonuses would not be paid.

In five applications by employers overtime payments were approved when employees were required to work more than the number of hours constituting a normal week's assignment.

In one joint application a wage increase was approved to take the place of piece work rates.

In one employer application a range of wage rates submitted was approved as not being excessive and having been in effect prior to the date of the order.

In one employer application standardization of basic wage rates was approved for air pilots employed in pooled operations.

In one joint application, following a collective agreement, permission was given to apply a bonus on an equivalent hourly rate basis, exclusive of overtime.

In ten applications originating with employers, payments of cost of living bonuses were approved on the ground that such payments would be "fair and reasonable" under the provisions of section 12 (*b*) of P.C. 8253.

In one application by an employer to be relieved of payment of additional cost of living bonus the application was granted on the basis of submissions that the undertaking in question was being conducted at a financial loss.

In one employer application for permission to make adjustments in cost of living bonus, the application was refused because proposed adjustments were inconsistent with the terms of the order.

PRICE CONTROL IN CANADA DURING APRIL, 1942

Price Adjustments—Subsidies—Economies, Conservation and Restrictions—Anti-Hoarding Campaign—Consolidated Rentals Order

A NUMBER of price orders have been made during April, with the order re organizing the whole price structure of the milk and dairy products industry outstanding among them. Maximum prices for fuel wood have been set locally in a series of orders, and a decision reached not to increase domestic railway rates. Thirty-five new classes of goods have been added to the "seasonal" list.

Provision has been made for prices to be reduced if the payment of flat rate subsidies reduces costs below the level which provided a basis for the ceiling prices.

The program of economy and conservation has gone on vigorously. The governing order has been amended to add to administrators' powers. Telephone services have been subjected to priority ratings. Conservation of metals has been effected under orders concerning plumbing equipment, bolts and screws and farm equipment. Paper products are restricted and costs cut under three orders. Toilet goods are to be sold in simple packages and containers conserved. Retail sales and deliveries have been subjected to new and stringent restrictions and controls over commercial transport extended to include non-motorized vehicles, other than railways.

Rental control has been revised in a new consolidating order which supersedes the earlier orders.

Price Adjustments

Groceries.—The prices of a number of food products have continued to concern the Board. Following Board Order 116, which provided for the reduction of manufacturers' prices of a number of specified grocery items to the highest at which sales were made in June, 1941, the Board issued a statement that in the rare cases in which prices were higher in June than in the standard basic period the order does not apply. Further, certain items, soda biscuits, processed cheese, wax and toilet paper, have been removed from the list of commodities covered by the order. Other arrangements have been made in these cases to adjust the "squeeze" on wholesalers and retailers.

Dairy Products.—The temporary subsidies on *fluid milk* and milk sold for the manufacture of concentrated products which were paid to ensure adequate supplies during the winter months have been discontinued from April 30. A special committee was appointed in December to investigate the supply and prices of dairy products with a view to devising a more equitable and balanced price structure. After study of its report the Board has completely reorganized ceiling prices on milk and dairy products, effective May 1 (Board Order No. 124). Maximum retail prices for fluid milk have been established for sixteen specified areas and for "principal markets" in large cities designated within each area. These maximum prices do not involve any general price increase to consumers. Though there are increases allowed in some cases—Charlottetown and Vancouver, there are decreases in other cases—Regina, Saskatoon, Moose Jaw and Swift Current where retail prices had been advanced two cents to maintain supplies in the face of local feed shortages in August, 1941, and where therefore no subsidy had been payable. The maximum prices for the different areas are subject to adjustment by order of provincial authorities with the written concurrence of the Board except in the cities which are designated as "principal markets". The new policy is designed to maintain production by removing disparities in the structure of retail milk prices in the principal markets and by allowing some flexibility in the adjustment of prices in some of the minor markets in the different provinces.

At the same time maximum prices have been set on *domestic cheese* f.o.b. factory shipping point. These are designed to bring cheese prices into line with those of other dairy products. For first grade Canadian cheddar made after May 1 and sold for home consumption the maximum price is 24 cents a pound including the bonus of two cents in Ontario and Quebec and the Dominion bonus of two cents for higher scoring cheese. This is about a cent below the yield from bonuses and prices current at the end of April and 5 cents a pound lower than the original ceiling price set in November, 1941. The new price corresponds closely to the total return obtained by producers under the terms of the new British export contract announced by the Minister of Agriculture.

The maximum prices set on *butter* allow for normal season variations in prices. In the Maritime Provinces, Quebec, Ontario and British Columbia a maximum wholesale price for first grade creamery butter of 35 cents is set for the six months of May to October,

rising to 38½ cents for March and April. In the Prairie Provinces the maximum prices range from 33¼ cents in the flush period to 36¾ cents in March and April. Provision is made for necessary packaging and carrying charges. The summer prices set in the schedule are a fraction of a cent below the original ceiling prices, but the sliding scale of maximum prices allows for storage charges and provides an incentive to producers to increase their output in the winter months. Further, to encourage production, producers are assured that at all times the appropriate government agency will stand prepared to support the market and maintain what is in effect a schedule of minimum prices at a level of three cents below the maximum price for any month.

During the basic period, prices of a large number of concentrated milk products were low and during the fall of 1941 a substantial quantity of milk was diverted to cheese factories, as the ceiling price of cheese was relatively high. With the removal of the temporary subsidy which was paid to allow manufacturers to obtain a supply of milk, it has been necessary to allow an increase in price just sufficient to permit the manufacturer of some concentrated milk products to pay the price necessary to obtain milk from the producer.

The minimum increase in price considered necessary is allowed in the order—25 cents per case of 48 tins (6 oz.) on evaporated milk and smaller increases in the maximum prices of condensed milk, skim milk powder and condensed skim milk sold in bulk. No price advances have been allowed for condensed milk in tins and cases nor for other concentrated whole milk products or concentrated milk by-products. Even for evaporated milk the difference in price to the consumer will not exceed half a cent a tin.

Dairiloid.—A maximum price has been set on "Dairiloid", a substitute for gelatine imported from the U.S.A. Dairiloid is used as a stabilizer in the manufacture of ice cream in place of gelatine which is needed for war industries (Administrator's Order No. A-85).

Miscellaneous food products.—The price of potatoes has again posed a problem and a maximum retail price of 5 cents a pound has been set on new potatoes from May 1 to August 31, 1942 (Administrator's Order No. A-96). As no onions were sold in the Yukon during the basic period, maximum prices have been set (Administrator's Order No. A-14). Since processors of frozen eggs are now required to pay a higher price for eggs than they paid in 1941 the prices at which they may sell frozen eggs have been adjusted (Administrator's Order No. A-89). Maximum prices have also been established for the spring pack of canned lobsters in 1942 (Administrator's Order No. A-94). The price of fresh salmon, a seasonal product, will not be allowed to increase over that of the corresponding month of 1941, under a new order which includes the catch of both the eastern and western coasts of the Dominion and of Newfoundland (Administrator's Order No. A-91).

Meat Prices.—During the month a shortage of beef threatened as a result of unusually light sales of live stock in domestic markets. This raised in an acute form in some regions the problem of ensuring an adequate domestic supply under the price ceiling on meat in view of the heavy drain of live stock to the U.S. market.

The packaging of seidlitz powders has also been regulated and uniform maximum prices established to allow for this change and for a considerable increase in the cost of ingredients (Administrator's Order No. A-97).

The prices of food packages have also received attention during the month in orders adjusting the prices of meat baskets to ensure continued production (Administrator's Order No. A-83) and amending the original order regarding fruit and vegetable packages (Administrator's Order No. A-95 amending Administrator's Order No. A-29).

Fuelwood.—Following the issue in March of a local order governing the prices of fuelwood, a whole series has now been issued covering numerous areas in Quebec province and the North Bay area of Ontario. These orders, which were made after investigations showed that fuelwood was being sold at prices in excess of those prevailing in the basic period specify both "roadside" and delivered prices for various types of wood. The price charged by sellers for millwood such as slabs or edgings, is not to exceed "the highest lawful price at which such person sold or offered for sale the same kind and quality of fuelwood to the same customer or class of customer during the period December 1st to 15th, 1941" (Administrator's Orders Nos. A-103, A-104, A-105, A-106, A-108 and A-110). At the same time the Coal Administrator has established a uniform method of measuring fuelwood for sale and delivery throughout Canada since in some localities wood had not been sold by cord measure. From May 1, fuelwood must be sold by the cord, each cord containing 128 cubic feet of stacked fuelwood. Primary producers and dealers must deliver an invoice with any fuelwood showing the quantity sold measured in cords or fractions of cords. (Administrator's Order No. A-82.)

Birch and hard maple of certain thicknesses and grades were not being produced in sufficient quantities to allow prices to be established for them in August and September,

1941, when the Timber Controller made two price orders. A demand for this lumber has now developed and the Administrator has therefore issued an order setting maximum prices (Administrator's Order No. A-92). An additional Order (Administrator's Order No. A-93) sets maximum prices for fir door stock.

The Timber Controller has also reminded all sellers of pulpwood east of Alberta that no contracts are valid unless submitted to him.

Railway Rates.—Increases of 10 per cent in the case of passenger traffic and of varying amounts up to 6 per cent in the case of freight rates authorized by the inter-state Commerce Commission in the U.S.A. were followed by applications in Canada for similar increases. These have been refused, the Board holding that Canadian conditions do not justify any general increase in rates for purely domestic transportation. The claim that Canadian rates should be raised to maintain the normal competitive relationship with competing U.S. routes was rejected. In the case of international travel however, the Board has concurred in increases corresponding to those granted in the U.S. so that the combined rates covering transportation of goods or persons across the boundary will as usual be based on the U.S. rate structure.

Rayon Print Fabrics.—Because of increased material and production cost for rayon print fabric sold at retail in the spring and summer and not substantially similar to any fabric sold during the basic period its price has been adjusted. Material which was sold by manufacturers between January 1 and March 31, 1941, at a price not exceeding 55 cents a yard may be increased in price by not more than 10 per cent and material which was sold in that period at more than 55 cents a yard may be increased in price by not more than 12½ per cent. In future no manufacturer may sell rayon print fabric not substantially similar to that sold during the basic period without submitting detailed cost sheets to the Administrator and securing his approval of the price. (Administrator's Order No. A-12.)

Gloves and Mattresses.—Another order (Administrator's Order No. A-73) controls the price of fur-lined and fur-trimmed gloves, mitts and gauntlets to limit any increase in price to the amount of any increase that may take place in the price of the fur which is exempt from the ceiling.

Maximum prices have been set on mattress flock No. 1 new tailor "sweepings" and "cuttings" to allow the maximum price of finished mattresses to be maintained. (Administrator's Order No. A-84.)

Fall and Winter Clothing: the "Squeeze" Adjusted.—There has been an increase in the cost of production of some types of fall and winter clothing since they were made for sale at retail in the fall and winter of 1941. The resulting "squeeze" has therefore been distributed by an order which allows a price increase by manufacturers of not more than 5 per cent. Cost sheets must be submitted to the Administrator and prices approved.

Harness.—A similar arrangement has been made for harness for which the cost of material and of manufacture has increased. To distribute the "squeeze" among tanners, manufacturers, wholesalers and retailers, the Administrator has set maximum prices on the leather sold to manufacturers and on the harness sold by manufacturers to wholesalers and retailers. (Administrator's Order No. A-13.)

Seasonal Goods.—Thirty-five new classes of goods ranging from golf clubs and baseballs to natural ice and porch swings have been added to the W.P.T.B. list of "seasonal" goods. Additional regulations were necessary since neither these goods nor any similar goods were being sold during the basic period. Prices higher than those at which sales were made last is in some cases allowed to cover such cost increases as had taken place prior to the basic period. The order specifies permitted percentage increases in some cases. In others, price advances must be approved by the Administrator concerned. (Board Order No. 115.)

Individual Price Adjustments.—Three sets of industrial adjustments have been made. Wholesalers and retailers distributing the product of a Regina broom manufacturer have been allowed to raise prices to reflect the increased manufacturer's selling prices established during the basic period. (Administrator's Order No. A-78.) The Consolidated Mining and Smelting Company of Canada Limited has been allowed to increase its prices in their retail commissaries operated for employees at Goldfields and Yellowknife by not more than the amount by which laid down costs had increased from the basic period to May, 1942. (Administrator's Order A-48.) Maximum retail selling prices have been set for the retail associations of the Saskatchewan Co-operative Wholesale Society Ltd. (Administrator's Order No. A-98.)

Subsidies

In those cases in which it is necessary to pay subsidies to ensure the maintenance of supplies of domestic or imported goods under the price ceiling it is considered desirable and necessary "wherever possible to arrive at uniform and flat rate subsidies based on average costs or selling prices." This means that the costs of a small number of importers, manu-

facturers or distributors may be lowered below the costs on which they based their maximum selling prices under the Maximum Prices Regulations. In such cases the maximum price for the manufacturer, importer or distributor is to be lowered proportionately under a new order (Board Order No. 123). In dealing with applications for import subsidies the Commodity Prices Stabilization Corporation has developed new separate claim forms for wholesalers and jobbers and for manufacturers and processors which have been in use since mid-April.

Economics, Conservation and Restrictions

The program of simplification, economy and conservation proceeds vigorously, and it has been necessary to institute a number of new restrictions on civilian uses of scarce goods and services.

Board Order No. 82 which outlined the powers of Administrators and the method of implicating their orders has been extended. Besides having the power to prescribe terms and conditions of sale, the kinds, models, types, qualities, sizes and quantities of goods and services that may be sold and to fix or limit the quantities of any goods or services that may be manufactured, bought, sold, supplied or distributed, Administrators may now "require any person producing, manufacturing, extracting, refining, processing, storing, transporting, supplying or dealing in any such goods or services to produce, manufacture, process, extract, refine, store, transport, supply or otherwise deal with such goods and services in such manner and in such priority to other business" as may be specified by the Administrator. (Board Order No. 122.)

Telephones.—To conserve stocks of such scarce materials as steel, copper, brass, rubber, zinc, and tin, and to ensure the maintenance of services for essential purposes, telephone services in Canada are now subject to priority ratings (Board Order No. 119). The armed services, producers of munitions, defence projects, and governmental or other services and agencies related to the war program or to the defence of Canada are in the top classification. Agencies essential for the welfare of civil life in the community and the protection of public health and safety rank next, followed by other essential commercial and industrial telephone users. Every supplier of telephone service is required to regulate the assignment of plant, equipment and facilities in such a way as to provide necessary service in this order. Telephone companies are freed from contractual obligations in refusing to supply or continue telephone service in compliance with the directions of the Administrator of Services. There is no recourse against any telephone company which discontinues or restricts any service in conformity with the Order. Appeal may be made, however, to the Administrator of Services, who has authority to confirm or alter the decision and whose jurisdiction is final.

The Administrator is empowered to order, permit, restrict or prohibit any specific service and to determine the priority classification of persons to whom service shall be supplied or whose service shall be discontinued or limited.

Metals.—To conserve materials and labour the manufacture of unnecessary and elaborate plumbing equipment has been forbidden in conformity with a program of standardization of lavatories, baths, sinks and other sanitary fixtures adopted by manufacturers of porcelain, enamelled, cast-iron sanitary plumbing fixtures. (Administrator's Order No. A-90.)

Twenty-four sizes and shapes of bathtubs are eliminated. Two sizes—4′ 6″ and 5′ 0″—remain in recess panel type and roll rim on legs.

Sixteen sizes and designs of lavatories and industrial wash sinks are no longer manufactured. One size of pedestal lavatory and eight wall-hung lavatories and three sizes of industrial wash sinks are continued.

Forty-two kitchen sinks of all sizes and shapes have been discontinued. A 42-inch long sink with single drainboard and without apron will be the only type manufactured.

In all, eighty-two items, or approximately two-thirds of normal production lines, have been withdrawn from manufacture. Luxury items of all kinds, including coloured fixtures and acid-resisting enamelware, are prohibited. A great saving in cast-iron has been made by cutting down the sizes of the baths and sinks.

The stock production sizes of a wide variety of types of *bolts and screws* have also been standardized to conserve metal, and the production of other sizes prohibited. (Administrator's Order No. A-87.)

The manufacture of *tin plate containers* for honey and frozen eggs has been restricted to certain standard sizes and types, and in the case of honey, to 75 per cent of the quantity, by weight, used last year for making each size of container and in the case of frozen eggs to the same amount used last year. (Administrator's Order No. A-86 and A-74.)

Still further economies are provided for in a new order limiting the use of metals in the manufacture of farm machinery and equipment, attachments and repair parts (Administrator's Order No. 101). Under this order no metal of any kind may be used in the manufacture of a long list of farm implements and parts "except to produce joining hardware,

reinforcing strips or struts." The items on this list range from sleighs (apart from runners) to guide handles for horse-drawn hoes. In making a second list of products, including ploughs, cultivators, hoes, mowers, hay rakes, binders, milling and dairy equipment and windmills, no manufacturer may use any aluminium, antimony, chromium, cobalt, copper, lead, magnesium, molybdenum, neoprene, nickel, tin, vanadium, zinc, rubber or cadmium. A third schedule specifies the metals which alone may be used in manufacturing still other types of equipment. The order also requires manufacturers to keep careful records of inventories and purchases and to make reports to the Administrator.

Natural Resins.—To conserve available supplies of natural varnish resin which comes mainly from the Far East and to allocate them to essential industries, restrictions have been placed on the use of this material and all the materials contained in it. Without specific authority in writing from the Administrator of Oils and Fats no one may now process, use, sell or otherwise deal in any natural varnish resin or materials containing such resin including protective coatings, electrical insulation, phonograph records, adhesives and cements, driers, inks and paper, textile sizings, polishes and wax compositions. Imports into Canada are exempt from this restriction and finished stocks on hand on April 20 may be used until exhausted.

Paper Products.—Further economies have been introduced in the production of a wide variety of paper products under three administrators' orders. These specify the stock, styles and sizes to be used for students' scribblers and exercise books, stenographers' note books, paper napkins, tray covers, toilet paper and paper towels. To conserve paper and ink and to reduce costs margins are limited, and special imprints on covers are restricted to brand names and a simple colour. The stock used in covers and in scribblers and exercise books is prescribed, a minimum number of pages or sheets is provided for, and sizes are standardized. Coloured napkins are prohibited and sizes of napkins, towels, toilet rolls are specified. New designs are prohibited. The third order limits the quantity of paper which may be used in manufacturing solid fibre board and double face and double wall corrugated fibre board cartons (Administrator's Orders No. A-50, A-64, and A-100). Since the simplification order modifies the specifications for shipping cartons, maximum prices have been set for the new standardized product. (Administrator's Order A-102.)

Meat Baskets.—Provision has been made for the simplification and conservation of another type of container meat baskets, in an order forbidding their construction with handles and the use of branding or painting on the baskets.

Toiletries.—The toilet goods industry has developed a program for cutting costs and conserving materials.

Cardboard is being conserved through elimination of cartons for creams, tooth powders and colognes, in other cases by the substitution of folding cartons for cardboard set-up type boxes. Gift packages will be packed more compactly and counter and display advertising will be reduced to use up to 50 per cent less of the cardboard used in 1941.

Conservation of metal has been effected by the reduction of the amount of metal used in containers, by the use of refills to cut down on lipstick and by the simplification of metal containers. In one instance a cosmetic firm has discontinued use of tin tubes altogether and deleted nail polish from its catalogue. There will be no printing plate used in creating new ornamental paper box bindings, last year's designs being utilized. Talcum powder packaged in cardboard, may be transferred to used tins.

Retailers are being asked to assist the suppliers by placing on their counters salvage boxes for used tin tubes. Washed and sterilized, salvaged bottles can be reused and efforts are being made by some producers to recover opal glass jars. Thousands of corrugated and strawboard boxes will be used more than once wth newspaper excelsior replacing wood excelsior in packing. One manufacturer has eliminated tissue paper wrappings and further decided to leave jewellers' cotton out of gift boxes.

Clothing.—Amendments to the orders simplifying clothing provide for exceptions to the restrictions on sizes in special orders when these are necessary to meet "actual physical requirements" of the individual (Administrator's Orders No. A-99 and A-120). A number of other amendments have been made in the order respecting the use of rayon, cotton and wool in the manufacture of women's misses, and children's wear, to cover certain types of garment which were not specified in the original order and to make certain adjustments in sizes and in special cases, such as maternity dresses.

Special announcements have been made regarding cuffs on trousers where finished stocks are already on hand.

An order dealing with the conservation of wool limits the amount of raw wool which may be "put into process" for civilian uses during the six months period April 1 to September 30, 1942, for a long list of products, including carpets and rugs, blankets and worsted yarns and cloth, (Administrator's Order No. 88).

These limits take the form of specified percentages, ranging from 25 per cent to 15 per cent of the quantity of raw wool used last year.

Sugar.—Further developments in connection with sugar rationing include formal provision for the use of sugar in home preserving. The order applied to fruit but excluded meat. (Administrator's order No. 54.) It was noted that restaurants and soda fountains are among the industrial users of sugar who must restrict their use of sugar to the amount they used in the corresponding quarter in 1941.

Retail Sales and Deliveries.—One of the most important simplification orders made during the month concerns retail trade practices and deliveries. (Board Order No. 120.) The order provides that no retail deliveries are to be made except for goods worth $1 or more, though certain exceptions are provided for. Retailers may not collect goods for exchange or refund unless there has been a mistake or unless the goods are too heavy or bulky to be carried. Sales on approval except for house furnishings worth more than $10 are forbidden. Goods made to order may not be returned except in case of mistake. No manufacturer or wholesaler may sell to consumers unless he had established a retail outlet prior to the date of the order. These provisions are designed further to conserve rubber, gasoline and motorized equipment. Retailers are specially safeguarded if they wish to institute limitations on delivery and other services offered to customers more drastic than those provided for in the order. Merchants are also urged to conserve wrapping materials by delivering packaged goods without further wrappings. At the same time the W.P.T.B. issued a statement of policy allowing manufacturers, wholesalers and retailers to discontinue the practice of giving coupons and premiums, though they must continue to give additional quantities of the same goods and allow any customary price discount.

Wholesalers.—Representatives of wholesale firms of all kinds, which met on April 14 to discuss how they might support the price ceiling, set up committees to advise different sections of the Wholesale Administration of the W.P.T.B. The meeting was also concerned with methods of conserving gasoline, tires, motorized equipment and wrappings. Throughout Canada wholesalers have been considering these and other problems of conservation and of cost reduction.

Commercial Motor Transport.—In order to plan further economies in the use of gasoline, rubber and motorized equipment and to ensure the maintenance of necessary services, the Administrator of Services has sent out a questionnaire to operators of trucks and taxicabs. These operators are asked for full information concerning vehicles used, types of service, gasoline consumption and tire purchases, as well as for suggestions respecting economies.

The powers of the Administrator of Services over the transport of goods has been extended to cover the transport by all vehicles, not merely motorized vehicles, other than railways, in a (Board Order No. 121). This superseded the order made in March (No. 105) giving him extensive powers over commercial motor transport. His powers over taxicabs, and "Drive Yourself" cars have, however, been transferred to the Transit Controller (Order No. Transit 2).

Anti-Hoarding Campaign.—Increasing shortages and the urgency of reducing consumer expenditures have led the W.P.T.B. to undertake a campaign against hoarding. Retailers have been warned not to advise customers to stock up on goods which they expect to be scarce.

On the other hand, consumers are urged to lay in stocks of coal at once to relieve possible future transport difficulties. This is the one exceptional case in which buying more than immediate needs is desirable.

Rentals.—The basic orders controlling rentals have been revoked and replaced by a single consolidating order which makes sweeping changes in the regulations (Board Order No. 108). These changes are designed especially to reinforce security of tenure for tenants and to assist those in search of homes. Landlords must now give a minimum of three months notice where occupancy is for one month or over. The owner or purchaser must give reasonable proof that he needs the accommodation before giving notice to vacate and must undertake to live in the vacated premises for the ensuing year. Landlords must supply prospective tenants with a statement on a printed form setting forth the rental paid by the last tenant and other necessary information, a copy of which must be sent to the nearest regional office of the W.P.T.B.

New forms of application for changes in rentals have been distributed to all W.P.T.B. branch offices.

Boarding and lodging houses are required to post in each room a printed statement showing the maximum rental for that room when occupied by one person and the rate per person when occupied by more than one person. Operators of tourist cabins and homes are also required to post maximum rates for all accommodation, but they will be allowed to take in summer transients even where this means giving notice to present lodgers. Hotels must post maximum rate schedules and will not be allowed to charge more than the rates effective on October 11, 1941. Seasonal hotels are limited to a maximum charge equal to

that made in the corresponding season of 1941.

A landlord may apply for a higher rental if his taxes or water rates have been substantially increased since January 1, 1941. The mutual agreement between landlord and tenant formerly used in support of an application for increased rental is discontinued. Provision is made to prevent landlords from obtaining additional sums through an option to purchase. Tenants are entitled to recover excess payments. Recovery may be made by civil action or by deducting the excess from subsequent rental payments.

All living or sleeping accommodation in educational or charitable institutions, land or premises used solely for farm purposes, or for public entertainment or exhibition, and housing accommodation owned by Wartime Housing Limited are exempt from the provisions of the order.

The Rentals Administration, formerly in charge of a Commercial Rentals and a Housing Rentals Administrator is now to administer all types of rentals jointly. One of the former Administrators supervises Quebec and the Maritime Provinces and the other Ontario, the Prairie Provinces and British Columbia.

It has been announced that there is no intention of freezing real estate sales, or of placing a ceiling on real estate prices.

COMPARISON OF PRICE CONTROL IN CANADA AND THE UNITED STATES

ON April 28, President Roosevelt announced a comprehensive program of price control in the United States. Effective May 11 in so far as prices of manufactured and wholesale goods are concerned and May 18 in respect of retail prices, the United States program bears great similarities to the price control policy administered in Canada by the Wartime Prices and Trade Board.

The following article is a comparison of the American and Canadian price control policies:

The American price ceiling policy makes its entry under a different set of conditions than those prevailing at the time of the introduction of the Canadian program of price control. In Canada in the sunny days between last September 11 and October 15, the housewife backed out the car and drove down-town to make her daily purchases with never a thought of a sugar ration, a beef shortage or the life of her tires. The retailer restocked his shelves with an eye to the Christmas market. And little did either realize they were establishing prices for the duration. When the Canadian ceiling became effective December 1 it was a good deal like a bolt from the blue.

During the American basic period—the month of last March—ceilings and rations and price fixing were freely predicted; industry was already feeling the consequences of the cutting of Pacific supply lines; Congress was reaching the end of a four month argument on the all-over ceiling; newspapers carried comments on the Canadian experiment; and, most important of all, selective ceilings had been in operation for months, holding under control the prices of many of the commodities most likely to dislocate a general ceiling plan. So that when manufacturers' and wholesalers' prices came under control May 11 and retailers' prices May 18 there was little shock and no surprise.

Another important element in the situation was the effect of prices in one country upon those in the other. From December 1 to May 18, the administrators of the Canadian plan had to fight the upward pull of rising prices across the line. The Americans do not have to cope with any corresponding problem.

In the second place there are differences, although not so great, in the plans themselves. The most significant is in the point of attack. Canada put a ceiling on retail prices and left a good deal of leeway for intermediate adjustments—under the supervision of authority. The United States first clamped a roof on manufacturing and wholesale prices and then, a week later, on prices to the consumer.

Exemptions

Another point of difference is in exemptions. Both Governments are unwilling to set up the expensive and complicated machinery that would be required, for instance, to enforce ceilings on all primary farm products; but a comparison of exemptions shows many differences in detail. Restaurants, movies and trucking services, all under the ceiling here, are free of price control in the United States.

A further and very interesting difference is found in the American requirement that every retailer shall post in his store the prices of all "commodities designated as cost-of-living commodities" as established during the basic period, the month of March. There are nearly two million retail stores in the United States and, as here, each retailer established his own maximum prices. There are well over a hundred cost-of-living commodities and on any one of them—canned peaches, for in-

stance—there may be a wide variety of brands in assorted sizes. Also there are the problems of seasonal goods. A line of summer sweaters may not have been offered for sale in March but may make its appearance in June. Sweaters are a cost-of-living commodity. It is safe to predict that not only a large volume of detail work but also a measure of courage will go into the solution of this problem.

Farm products have been mentioned as not being under the American ceiling. There is, however, a formula for determining their price. As long as they sell below "parity" the ceiling does not apply to them. If the prices of farm products go above parity they automatically lose their exemption. The Department of Agriculture determines whether prices are above or below this quantity—which is a ratio. It is 110 per cent of the quantity which represented the relationship of farm produce prices to other commodity prices between the years 1909 and 1913. The farmer is not required to figure out for himself whether the prices he charges are above or below parity. There is no corresponding measure to this in Canada.

The administrative set-up is similar in the two countries. The United States has an administration, but so far not an administrator, in charge of each major industry and a regional office representing the Office of Price Administration in each state. Canada has an administration, headed by an administrator, in charge of each major industry and thirteen regional offices representing the War-time Prices and Trade Board in as many regions.

Both plans involve registration and licensing of all businesses and, as an aid to enforcement, licences can be cancelled.

Summing up, it may be fairly stated that although the price ceiling entered upon a different scene in each country it is in itself basically the same plan both north and south of the boundary line.

Price Control and Wage Control

The greatest difference of all is not in the plan or the scene but in a concomitant factor. In Canada the price ceiling policy is accompanied by a wage control policy. In the United States it is not.

In Canada these two theories have been developed along parallel lines. One is that any price increase develops other price increases. The other is that higher wages inevitably mean higher prices. To quote the Minister of Finance: "Each increase in price that we would permit by means of a flexible ceiling would be bound to lead directly to other movements. Sometimes they would lead directly to increases in the prices of goods made from other goods or into which the prices of other goods enter as a cost. In other cases, increases in prices would have their effect on many other prices through bringing about higher wages and consequently higher costs in many other industries. This sort of process would gather momentum like a snowball rolling down hill." In short, inflation would develop—something which the whole machinery is designed to prevent.

So far, the United States has no ceiling on wages. However, Mr. Leon Henderson, the price control administrator, is reported in the press as stating to the Ways and Means Committee that freezing of wages as well as of prices is necessary to control "a grave inflation" situation. It is expected in many quarters that the whole field of inflation controls will be re-examined by Congress with a view to placing in the hands of the price control administrator power to control all factors entering into the cost of living. With war needs reducing available supplies for civilian consumption and increasing scarcities evident in the field of consumer goods, it is believed by many, that the American situation contains potentialities of inflation.

On the wage control question, and in several other fields, American policies, being dictated by the same necessities, must be broadly similar to the Canadian program. If consumers' prices are not to rise, the "squeeze" must be rolled back and the retailer's loss shared by the wholesaler, manufacturer and primary producer. Costs cannot always be controlled. In order to keep a civilian industry going at all it must pay wages that are competitive with those in war industries. Even harder to control are import costs. In such cases, to meet the rising costs without increasing prices, it is necessary to choose between going without, and paying some kind of a subsidy.

Subsidies

In Canada, subsidies have been managed in two ways: either by direct payment or by making bulk purchases for government account and reselling the goods to Canadian dealers or manufacturers at such prices as enable them to sell to consumers under the ceiling. Sometimes a subsidy has been used to ease the "squeeze", when producers and dealers together could not absorb all the cost increase and stay in business. And sometimes a subsidy has been paid to ensure supply of an essential consumer commodity. It has been the Canadian policy to pay subsidies *only* in the interests of the Canadian consumer: not on war materials, or on goods for export, or on non-essentials, or on commodities exempt from the ceiling.

In the United States, it was for a long time felt that, the economy being to a much greater extent self-contained, it would be possible to manage without subsidies, and so far there is no provision for subsidizing imports. The

time-lag difficulty is there, however, and other domestic problems are defining themselves which, it would seem, can be solved only by subsidy or by bulk purchase measures such as are effected by our Commodity Prices Stabilization Corporation. The latter has no counterpart as yet across the line but it is understood that subsidy measures are under consideration. There, as here, it is believed the subsidy is the truly democratic way of meeting the situation.

Export Control

Finally, there is the question of export control. The Wartime Prices and Trade Board has not exercised its authority to control the price of exports from this country. One reason is that many industries have not yet made up losses suffered during the depression and are absorbing a good deal of "squeeze" at home. Only abroad can incentives be found to keep production at needed levels. If the attraction of outside markets threatens Canadian supply, however, a permit system of export control is available to keep the situation in hand.

The situation in the United States in this respect is different. There, export prices have been placed under a ceiling for two reasons. One is that, like Canada, the United States does not want supplies drained off to higher markets elsewhere and it is desired to protect their "infant" ceiling against the severe upward pull of higher outside prices. The other is that consideration has been given to post-war trade and the value of goodwill.

In both countries the experiment of price control already has passed through several stages. In Canada a straight price control policy soon proved insufficient and restrictions in the use of certain materials, simplified practice to cut production costs and rationing to rationalize the supply situation were added to the program. The United States is following a similar plan in the development of its policy.

In the development of future policy there will undoubtedly be a large measure of Canadian-American co-operation in the maintenance of these price control policies which is already being exemplified in the sharing of supplies.

NUTRITION AND WAR PRODUCTION

Relation of Proper Nutrition to Health and Productive Efficiency of War Workers

NO longer does success in a war depend alone on the men in uniform. This war is going to be won by production and morale on the home front. That means that everyone here at home is important, and especially the workers in defence industries. Our whole population is now called on to display stamina, courage, efficiency and resistance to disease.

All of these qualities that are so important now, especially in defence industries, can be influenced by the food we eat. Many of the breakages, and much of the inefficiency and general ill-health in industry, may be influenced by food.

Recent surveys by the Canadian Council on Nutrition found that scores of the families studied were not getting the food they needed for best health and efficiency. Approximately only forty per cent of the families studied had adequate diets. Many cases were adequately fed on less money than others, so that while the state of nutrition is undoubtedly influenced by income, malnutrition often results from not knowing how to select and prepare the right foods. It was found that too many people are indifferent to how much better health they could have with a little attention to the newer ideas in nutrition, and this indifference causes some of the malnutrition.

Influence on Industry

In some instances industrial war workers are men who have been rejected for military service, and sometimes that rejection was due to malnutrition. Surveys of the home diets of Canadian war workers indicate that approximately half may be undernourished because of dietary deficiencies. Yet these same workers are called upon to produce an ever increasing supply of war material and munitions. As a result of dietary deficiencies, illness and time loss are higher in this group than among well nourished workmen. Therefore, attention to nutrition would be beneficial to health, as well as increasing productive capacity.

Other countries have found that attention must be paid to nutrition, especially during the strain of war. The following quotations and notes reflect experience in this direction in Great Britain and the United States:—

Sir John Boyd Orr, noted British Nutritionist, reported his findings in *Food, Health and Income, 1936,* as follows: "It thus appears that, in the United Kingdom, the diet of at least 50 per cent of the population falls short of the desirable standard...."

British Medical Journal, January 18, 1941, says: "The effects of malnutrition are well-known, only one—the effect on working

efficiency—need be referred to here. The improvement of the diet of workmen whose diet was not previously up to the standard for health is followed by increased output without any conscious increased effort and also by a reduction in the number of accidents. Many factories are now providing a meal for employees. It is likely that, as part of the national effort for increased output of war material, the provision of a meal will be made compulsory."

From the British *Report of the Chief Inspector for Factories, 1940* (cond. 6316).

Factories Canteens Order 1940 (No. 1993) Great Britain, requires the occupier of any factory employing more than two hundred and fifty people and doing work on behalf of the Crown to provide a canteen where hot meals may be bought.

Before this Order was passed (that is, early in 1940) 64 per cent of those plants engaged in munitions-making had established canteens on their own initiative.

United States Department of Agriculture Yearbook, 1939, says: "In the studies just cited, diets of families of employed workers in cities were practically always found to be in definite need of improvement."

United States Department of Agriculture Misc. Pub. 430 (1941) says: "About one-fourth of the families in the United States have diets that could be rated as good; more than a third, diets that might be considered fair; another third or more, diets that should be classed as poor."

Pamphlet of the United States National Association of Manufacturers, November, 1940: "Up to the present time the emphasis has been almost entirely placed upon occupational hazards, and these are responsible for less than 10 per cent of the absenteeism. It is not unreasonable to expect that by attacking the conditions which are responsible for 90 per cent of the absenteeism (note: including nutrition), a great reduction could be made that would be profitable to the employer as well as the employee."

Sub-Committee on Nutrition in Industry, National Research Council, Washington, D.C., reported in July, 1941: "There is some evidence that employers of labour in this country are becoming aware of the significance of the recent advances in our knowledge of nutrition in so far as these advances relate to the health and efficiency of workers. . . . It is evident that the particular measures to be applied in a given plant will depend on the conditions actually found to exist in the plant. . . . Industries should be given the opportunity to utilize advances in the science of nutrition for the benefit of their workers and in the interest of greater production, by obtaining expert advice from federal, state, and local governmental agencies concerned with health and nutrition."

Establishment of Canadian Nutrition Services

In Canada, as part of this world-wide interest in nutrition, there has been established in the Department of Pensions and National Health the "Nutrition Services", which began operations in November, 1941.

Its objectives are as follows:

1. To inspect and confer with those maintaining cafeterias, canteens, etc., in industrial plants, with a view to checking the nutritional value for the workers, and to suggest improvements where possible. This work is carried on under the general authority of Order in Council No. 1550. Already over one hundred and fifty industries have been helped and leaflets are being distributed monthly to over three hundred thousand employees, giving hints on breakfasts and lunches, etc.

2. To provide expert opinion and information on nutrition for the Department of Public Information, and for other Departments, as requested.

3. To sponsor such investigation or research in nutrition as may seem desirable for the information and protection of the Canadian public.

4. To assist the public generally to maintain and improve nutrition in Canadian homes by advising as to purchase, choice, and preparation of foods. This work involves the organization of the whole country into a Canadian Nutrition Program, and is being done in co-operation with Provincial Health Departments, and other interested groups.

The Director of Canada's Nutrition Services is Dr. L. B. Pett, formerly of the University of Alberta. Dr. Pett is qualified by graduation from different Universities in agricultural chemistry, biochemistry (nutrition), and finally in medicine. His experience in nutritional research and teaching includes two and a half years in Europe under eminent scientists. His researches on vitamins and his lectures on nutrition have also won him wide recognition.

The Assistant Director, Miss Marion Harlow, graduated from Acadia University, Nova Scotia, in Household Science, and the Provincial Normal School. For five years Miss Harlow has been Nutrition Supervisor for the Victorian Order of Nurses in Montreal. Miss Harlow has had notable success in organization and instruction.

A Field Staff has been employed, consisting of three graduates in Household Economics, with varied experience since graduation as dieticians, demonstrators, etc.

When this program is fully organized and has secured the co-operation of all groups, it is expected to make a major contribution toward helping Canadians attain the highest levels of vigor, efficiency, and good health.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for April, 1942

REPORTS from the 123 technical and vocational schools and training centres in which War Emergency training classes were in progress indicate that the total number in the classes at the end of April was 14,884. This total represents only a slight reduction from the total reported in training at the end of March. The reduction is chiefly due to a decrease in the numbers training in army classes, National Defence Headquarters having made other arrangements for some of the tradesmen who had been in training under the program. At the end of April there were 2,666 enlisted men receiving training in the Army and Navy classes. The pre-enlistment classes for the R.C.A.F. had an enrolment of 5,179 at the end of the month, this total being a little higher than the March figure. The total number training in industrial pre-employment classes was 4,933 which represents a slight decrease as compared with the March total for similar classes. Under the Rehabilitation plan, vocational training was being given to 134 men who had been honourably discharged from His Majesty's Armed Forces.

During April there were 3,591 new trainees in the industrial pre-employment classes, while 1,515 entered the R.C.A.F. pre-enlistment classes. In the Navy and Army classes there were 1,072 enrolments while 66 men commenced training under the Rehabilitation plan.

From the pre-employment classes 2,761 graduates were placed in employment in war industries during April. This is the greatest number ever reported as having been placed in any one month from industrial pre-employment classes since the program has been in operation. Also 54 men who had been receiving vocational training under the Rehabilitation plan were placed during the month.

Of those training in the industrial pre-employment classes, 36 left to enlist in various units of the Armed Forces, while 1,252 men from the R.C.A.F. classes completed their training and enlisted with the Air Force.

From the April reports, it is evident that women may be expected to play a greater role in Canada's War industries. Of the 3,591 trainees who commenced training in the industrial pre-employment classes during April, 1,566 or approximately 43 per cent were women. The number of women placed from such classes during April was 1,042. At the end of April, of the 4,933 trainees who were still receiving training, 1,336 were women.

Explanation of Tables

Table 1 is a summary by provinces which shows the numbers in the various types of classes as at April 1, 1942, the numbers enrolled during April and the numbers who were still being trained as at April 30. Placements, enlistments and withdrawals from pre-employment R.C.A.F. and Rehabilitation classes during the month of April are also given. This table does not include part-time industrial classes.

Table 2 gives by provinces the trade distribution of the 4,933 trainees who were still training in the full-time industrial pre-employment classes as at April 30.

An age and sex classification of the new trainees enrolled in the pre-employment classes during the month of April is given in Table 3. The figures given include Veterans of the 1914-18 War and discharged soldiers of the present War, who are given preference in the selection of trainees, but a separate age classification for these men is also provided in Table 4.

Table 5 shows by provinces the trade categories of the 2,666 enlisted men who were in training as at April 30.

Part-time industrial classes, whether classes were given in schools or plants are included in the following table. A total of 1,871 trainees were being trained on a part-time basis at the end of April.

Although several plant schools have been approved and were in actual operation during April, only a few were able to submit their April reports before the present issue of the LABOUR GAZETTE went to press. The reports received indicate that 101 trainees were enrolled in full-time plant classes as at April 30.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at March 31, 1942

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at March 31, 1942. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (Labour Gazette, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. If however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to $120. If a pensioner is unmarried the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $400. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

OLD AGE PENSIONS

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31, 1942

—	Alberta	British Columbia	Manitoba	New Brunswick	Nova Scotia	Ontario

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Health of War Workers—Defence of Canada Regulations—Explosives, Firemen and Old Age Pensions in Canada—Minimum Wages in Quebec, Alberta and New Brunswick—Hours, Boilers, and Electrical Plants in Alberta—British Columbia Trade Schools—Elevator Operators and Ice-cutters in Quebec—Saskatchewan Workmen's Compensation

DOMINION regulations to secure healthful conditions of work in war plants have been issued. Smoking and the carrying of matches in munitions plants are forbidden, and the regulations governing the shipment of explosives have been amended. Persons taking part in a strike or engaging in peaceful picketing may not on that account be restricted in their movements or made subject to detention orders by the Minister of Justice under the Defence of Canada Regulations. For service in the United Kingdom a Fireman's Corps has been formed. Two amendments were made in the Old Age Pensions Regulations.

Alberta has issued three new sets of regulations under the Boilers Act governing engineers' and firemen's certificates, fees and refrigerating plants, respectively. New orders have been made also under the Electrical Protection Act. Irrigation project workers have been exempted from hours of work limitations and special provision has been made for tourist hotels and restaurants in national parks under the Alberta minimum wage orders. In British Columbia there are new general regulations for trade schools and the special regulations governing correspondence schools have been amended. New Brunswick has extended its minimum wage order applying to the canning industry to subsidiary industries. In Quebec Minimum Wage Order 4 has been revised and two other orders renewed. Quebec has also reduced the minimum age for elevator operators and issued safety rules for ice-cutting. Six air transport companies have been added to the list of industries and companies covered by the collective liability system of workmen's compensation in Saskatchewan.

Dominion

Explosives Act

The regulations prohibiting private railway carriages from carrying more than 10,000 lbs. of explosives have been amended by an order gazetted May 2. In order to eliminate the dangers attendant on breaking freight unnecessarily the prohibition now applies only to private railways of less than standard gauge.

Old Age Pensions Act

Two amendments in the regulations issued under the Dominion Act (Labour Gazette, 1938, p. 286; 1939, p. 1230) were gazetted April 25. One provides that a pension authority in calculating a pensioner's income shall disregard any income from a cost-of-living bonus or supplemental allowance provided by the British Columbia or Alberta Governments. The second rules that any income in the form of assigned pay from a member of the forces on active service shall be similarly disregarded in the case of a pensioner who is not himself or whose spouse is not in receipt of a dependent's allowance.

Alberta which adopted the regulations made under the Dominion Old Age Pensions Act in 1937, gazetted on April 15 and 30 orders passed under its Old Age Pensions Act adopting the two new amendments. Saskatchewan has accepted the second amendment.

War Measures Act—Health of Workers

P.C. 1550, March 2, 1942, provides for the enforcement by the Department of Pensions and National Health of certain standards to ensure health in war plants. Since shortly after the outbreak of war a clause has been inserted in all war contracts imposing on the Minister of Pensions and National Health responsibility for securing healthful conditions of work. The new order in council applies to all factories, plants or shops where work is being carried on under a contract with the Dominion Government or the government of an allied or associated power or under a sub-contract, or in which any of these governments has a financial interest.

The Minister or any officer of the Department authorized by him may enter and inspect any such premises. The owner must maintain a record of sickness and accidents which is open to inspection by the Department at any time, display authorized posters and health and safety literature, adhere to standards of cleanliness, lighting, heating,

ventilation, etc., which are satisfactory to the Minister, provide medical services, satisfy nutritional standards specified by the Minister in regard to any food which may be provided for the workers and permit regular physical examinations of those whose duties are to prepare and serve food. When premises are being constructed or altered the owner must submit to the Department plans showing clearly the provisions for water supply, sewage, ventilation, etc.

The penalty for contravention of or failure to comply with these regulations or any order or direction made under them is a fine not exceeding $500 or imprisonment for not more than three months or both. In the case of a corporation, any person who was a director or officer at the time of the commission of the offence is guilty of the offence unless he proves that the act or omission took place without his knowledge and that he exercised all due diligence to prevent it taking place.

Fire Fighters Corps

Regulations governing the Corps of (Civilian) Canadian Fire Fighters for Service in the United Kingdom were issued on March 3. The regulations deal with the organization of the corps, qualifications for membership, conditions of service and discipline.

The corps is to be a civil defence organization whose members are liable for service anywhere in the United Kingdom or the Isle of Man. Hours of duty are to be not less than 72 in any week. A 24-hour rest period is to be granted every week or every 3 days for firemen required to be continuously on duty for periods of 48 hours. Extra hours of duty may be imposed up to 12 a week as punishment for breaches of discipline.

Members of the corps are to receive the same pay, allowances, pensions for disabilities and death, medical and dental care as do members of the Canadian Active Service Force.

Defence of Canada Regulations

An amendment to Regulation 21 gazetted May 2 declares that an order may not be issued under this regulation by reason only of a person taking part in or peacefully persuading any other person to participate in a strike. Regulation 21 empowers the Minister of Justice to make an order directing that a person be detained or restricted in his business, movements, associations, activities connected with the dissemination of news and opinions, or in the use or possession of any specified articles. It also rules that a constable may remove a person who is in or who fails to leave a place in contravention of an order under this regulation.

Because the penalties imposed under the Explosives Act on persons smoking or being in possession of matches or other fire-producing devices in munitions plants have been found inadequate to check this hazard, a new Defence of Canada regulation was gazetted on May 5 providing heavier penalties for such offences. Fines ranging from $50 to $100 or one month's imprisonment may be imposed for carrying matches, and smokers are liable to imprisonment for 3 to 12 months. The regulation also empowers the proprietor of a munitions plant to search any person entering the plant, provided that no woman is searched except by a woman.

Provincial

Alberta Boilers Act

New regulations governing engineers' and firemen's certificates were gazetted April 15 replacing ones issued in 1938. There are a great many minor changes in the regulations. The more important changes include the replacing of the Second Class Engineer's certificate by two certificates—one for 500 h.p. boilers and one for 750 h.p. boilers. Similarly, instead of the Engineer's Special Class certificate for boilers exceeding 200 h.p. there is one for boilers from 200 to 500 h.p. and another for those exceeding 500 h.p.

Every person working on a steam engine or boiler with 20 pounds or more working pressure per square inch and which has a heating surface in excess of 20 feet must hold one of the 10 classes of certificates issued. The regulations set forth in detail the qualifications for each type of certificate and the nature of the examinations. A certain amount of experience is required for all certificates although a certificate from a recognized school of technology will be accepted in lieu of part of the period of experience required. Minimum age limits for the certificates vary from 18 for a Provisional Engineer's certificate to 25 for candidates seeking a First Class Stationary Engineer's certificate.

General rules regarding applications for examinations, testimonials to be submitted, appeals, failures and the replacement of lost certificates are given. Provision is made for the issuing of temporary certificates valid for a maximum of three months when a properly qualified person is absent or when an employer

is unable to obtain the services of a properly qualified person. In no case may a provisional certificate permit a person to operate an engine, boiler or steam plant exceeding 100 h.p. unless he holds an engineer's certificate one grade below the required certificate.

A certificate may be confiscated by an inspector if a worker negligently operates or damages a plant or if he is under the influence of liquor while on duty. The Minister may cancel or suspend such certificate or otherwise deal with the case after receiving a report from the Chief Inspector.

The engineer in charge of a steam plant is responsible for the proper care and operation of the machinery under his care and must report all defects and accidents to the inspector as well as to his employer.

New regulations have also been issued in respect to the machinery and fittings of refrigerating plants. The regulations relating to fees for the registration and inspection of pressure vessels have likewise been replaced by a new set. Both were gazetted April 15. The latter includes a list of the examination and registration fees payable for each of the different types of engineers', firemen's and welders' certificates. The fee for a First Class Engineer's certificate has been raised from $10 to $20. Fees for the new Second Class Engineer's certificates are $15 for the 750 h.p. one and $10 for the 500 h.p. certificate. The new Engineer's Special Class certificate for boilers over 500 h.p. has been set at $15, and for boilers from 200 to 500 h.p. it is $10. Other fees remain unchanged.

Alberta Electrical Protection Act

The regulations issued by the Workmen's Compensation Board under the repealed Electrical Protection Act of 1919 (LABOUR GAZETTE, 1926, p. 216) have been replaced by new ones issued under the 1941 Act. The new regulations, gazetted April 15, consolidate the former ones and contain a few minor additions.

The regulations set forth detailed specifications for various types of electrical installations and include general and particular rules for the protection of electrical workers.

In general, workers are required to exercise caution at all times but particularly when dealing with live wires. They should test all safety belts and supports before using them. Suitable protective clothing and devices such as rubber gloves and shields, goggles, insulated mats and special tools, etc., should be used where necessary. Metal jewellery and loose clothing must be avoided. Every worker must be acquainted with first aid and resuscitation methods and the use of fire extinguishers. Printed instruction sheets describing the approved method of resuscitation should be posted in every factory and the Minister may organize instruction classes in the technique of resuscitation. Every public service company must have a resuscitation device with a person versed in its use constantly on duty.

No one may do work for which he is not properly qualified except under the direct supervision of an experienced and properly qualified person. Persons working in the neighbourhod of electrical installations with the dangers of which they are not familiar, must obtain authorization to proceed and must be supervised by a properly qualified electrical worker. No man shall work alone on a live wire, cable or appliance carrying more than 250 volts if underground, or more than 600 volts if above ground. Specially trained crews of at least four men provided with up-to-date equipment must handle work on live wires carrying over 4,000 volts.

Workers must immediately report any unusual conditions or defects to their superiors. All verbal messages should be repeated and the names of sender and receiver given to avoid accidents due to misunderstandings.

Particular rules applying to workers on supply stations and switchboard operation are given. They cover the operation of overhead and underground lines, series lamps, meters, and signal lines.

The installation specifications require among other things the provision of adequate working and climbing room about installations, the identification of all dangerous places with voltage and warning signs, the proper illumination of danger points, and the guarding or elevating where possible of live parts.

Alberta Hours of Work Act

The exemption from the 9-hour day and 54-hour week provisions of this Act first granted to employees on irrigation projects under the Water Resources Act in 1939 and again in 1941 (LABOUR GAZETTE, 1939, p. 473, 1941, p. 555) has been made permanent for the period between April 1 and November 30 of each year by an order gazetted March 31 and effective April 1, 1942.

Alberta Minimum Wage Act

An amendment in Order 3 governing women workers in the hotel and restaurant industry (LABOUR GAZETTE, 1941, p. 555) was gazetted April 15. It exempts, between May 15 and September 30, tourist hotels and restaurants in national parks operating only for that period from the clause limiting the amount which may be deducted from wages for board and lodging.

British Columbia Trade Schools Regulation Act

New general regulations and an amendment in the special regulations governing correspondence courses were gazetted April 2. Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta now have similar regulations.

The new British Columbia regulations are much more detailed than the ones they replace (LABOUR GAZETTE, 1937, p. 306) and apply to all trade schools whether or not they are covered by special regulations. They deal with advertising methods, fees, contracts, the sale of student services, entrance qualifications, teaching staffs, premises and equipment. A copy of them must be posted in each school.

Proprietors or operators of trade schools are to be responsible for all statements made by their representatives in the course of soliciting business. The regulations prohibit misleading advertising, verbal or written, the use of "Help Wanted" columns, promises of employmen, "blind" or unsigned advertisements and statements that there is a demand for a particular type of worker unless the school's records contain proof of such demand. The Minister may require any type of advertising to be submitted to him before publication and copies must be kept in the school records.

Trade schools are forbidden to operate in conjunction with a shop or business, and the services or products of the students must not be sold by the school except in the manner and at the prices which the Lieutenant-Governor in Council may prescribe.

The Minister must approve all forms of contract for tuition and may require a deposit of security to ensure the execution of the contract. If a student gives notice in writing of his intention to withdraw from a course, he is liable only for the amount of the tuition which he has already received, plus 10 per cent of the amount remaining due under the contract.

The proprietor or operator of a school must employ a competent teaching staff, supply and maintain suitable premises and adequate equipment and comply with health, sanitary and safety regulations. He must satisfy himself that applicants have the necessary physical capacity and educational qualifications to undertake the courses they propose to enter.

Fees for registration of schools are set at $5 for schools teaching one trade or occupation with an extra $2 for every additional trade taught, but in no case may the fee exceed $25.

An amendment in the special regulations governing correspondence and home-study schools was also gazetted April 2. It provides that no single consignment of a home-study or correspondence course may exceed either 10 per cent of the total number of lessons or one month's tuition, depending on which is less. The next consignment must not be despatched until the previous one has been completed or until at least a month has elapsed. If a course is advertised and sold with the understanding that it includes a period of practical tuition, a separate money value must be placed on the latter and it will be regarded as contingent upon the satisfactory completion of the home-study course. When a student withdraws from such a course he is liable for the amount of the tuition which he has received plus 10 per cent of the amount remaining due under the contract for the whole combined course.

New Brunswick Labour and Industrial Relations Act

Order 26, effective from April 7, supplements Order 25 (LABOUR GAZETTE, 1941, p. 1383) which established minimum wage rates in the canning industry in the counties of Restigouche, Gloucester, Northumberland, Kent and Westmorland, by imposing the same minimum rates in these counties for employers who manufacture or repair equipment used in canning factories or in the fishing industry. Men over 18 must receive 25 cents per hour, boys under 18 and women must receive 15 cents, and piece workers must receive rates which ensure that they are not paid less than the minimum hourly rates. Deductions for board and lodging may not exceed 50 cents per day. All workers must be paid at least semi-monthly.

Quebec Industrial and Commercial Establishments Act

Regulations to protect persons from the hazards of ice-cutting fields were gazetted April 18. Before a person may begin ice-cutting he must give notice of his intention in writing to the factory inspector, the inspector of the Sanitary Unit, and the municipal authorities in the area where the field is situated. He must also mark the field and the road leading to it in the manner specified in the regulations.

Quebec Minimum Wage Act

A new Order 4 covering industries to which special orders do not apply has been passed and two orders have been renewed.

Order 4, adopted February 17 and amended March 21, was gazetted April 11 and is effective for one year from that date. It repeals the previous Order 4 and all amendments, rules of interpretation, resolutions and permits or

exemptions. There have been few changes in the basic provisions of the order, but the numerous amendments have been consolidated and there has been some re-arrangement and clarification of the provisions. The approving order in council (gazetted April 18) states that the approval is based on the fact that there is no modification of basic wage rates and that the Quebec Regional War Labour Board has offered no objection. The new order, like the old one, applies to all workers contemplated by the Act, except those governed by a special order and it is now specifically stated that it applies to workers in firms with war contracts.

For the purposes of the order the province continues to be divided into four zones, consisting of Montreal, Laprairie, Longueuil, St. Lambert, Laval-des-Rapides and municipalities totally or partially on the island of Montreal as Zone I, Quebec, Quebec West, Iberville and municipalities of 10,000 inhabitants or over as Zone II, Terrebonne and municipalities of from 2,000 to 10,000 inhabitants as Zone III and the rest of the province as Zone IV. Thetford Mines is in Zone III for hotel servants and Chicoutimi in Zone IV for the textile industry. Employees who habitually work in more than one zone are included in the zone where the employer's principal establishment is located, or if there is no such establishment, in the zone which has the highest rate.

The minimum hourly rates and the work-weeks to which they apply are, except in one or two cases, the same as in the previous order as amended but minimum rates are no longer stipulated on a weekly, monthly or yearly basis. There also continues to be a special provision in most instances that workers with less than six months' experience may be paid 10 per cent less than the prescribed rate provided that the number of such workers is restricted to 10 per cent of the number of experienced workers.

Rates for some of the more important classes are as follows. In industrial and commercial establishments, at least 60 per cent must be paid 26, 24, 22 and 20 cents in Zones I, II, III and IV respectively, not more than 25 per cent may be paid 22, 20, 18 and 16 cents and not more than 15 per cent 17, 15, 13 and 12 cents. For office workers the previous rates of 25, 22·5, 20 and 15 cents for a 48-hour week now apply only to employees with at least one year's experience. For those with less than this experience, special rates of 17, 15, 13 and 12 cents have been set. Under the old order, inexperienced employees could be paid 10 per cent less than the rates established for experienced workers.

Drivers of motor vehicles as defined by the Motor Vehicles Act must be paid 30, 25, 23 and 20 cents according to the zone, and all other chauffeurs and carters, except those in industrial and commercial establishments, must be paid 25, 20, 18 and 15 cents. These rates apply to a 60-hour week, and there continues to be a penalty rate of $2 per hour for drivers of motor vehicles who are at the wheel for more than 12 consecutive hours. The hourly rates and normal work-weeks for garage employees, hotel employees, bartenders, watchmen, janitors, employees of municipal corporations, temporary employees in industrial and commercial establishments and workers not otherwise classified are the same as in the revised order of April 27, 1938, and may be found in the Labour Gazette, 1938, pp. 515-16.

The regular work-week in industrial and commercial establishments continues to be 48 hours unless otherwise stated, and the following establishments are now specifically listed as coming under this week: banks, except for messengers hired by the year at a minimum of $600, insurance companies, stock and bond brokers, radio-broadcasting companies, telephone companies, electric and gas companies except in retail departments, waterworks other than municipal corporation waterworks, amusement halls and laundries except those governed by a special order. A 50-hour week continues to apply in sash and door factories, and the following is the list of establishments to which a 54-hour week now applies: establishments manufacturing narrow fabrics, retail stores, butcher shops, cobbler shops, crushed stone quarries, post offices, barber shops and hairdressing establishments, cheese factories, bakeries, theatres, felt hat factories, meat packing establishments, rubber goods factories, biscuit factories, chocolate factories, flour mills, concrete pipe factories in Zone II, bootblacks, fox farms, and funeral undertakers in Zones I and II. A 60-hour week applies to sawmills in Zones II, III and IV, foundries in Zones III and IV, agricultural implement factories including separator factories in Zones III and IV, dairies and creameries, cheese and butter dairies, waste material trading establishments, hotels and restaurants, transport companies, wool carding establishments, employees taking care of horses and vehicles used by carters and truck drivers, public corporations except where governed by another section, apartment houses, real estate offices and office buildings.

Hours in excess of the regular work-week or in excess of 12 hours in any one day are overtime and must be paid at the rate of time

and one-half, though a worker whose agreed rate is higher than the minimum established need be paid only half the minimum rate in addition to the agreed rate. Exceptions to this rule are permitted in the following cases: if an employee is paid $30 per week in Zone I, $25 in Zones II and III and $20 in Zone IV even when he does not work a full week; if he agrees to take holidays in lieu of overtime pay, provided that one and one-half hours' holidays are permitted for every hour of overtime and the holidays are granted within three months from the date of the overtime; if, in the case of an office worker, the overtime is necessary because of the worker's own fault; if the worker works as watchman, furnace man, etc., for more than one employer in the same day; or if the employment is of a special nature, such as repair of electrical lines, which requires the employee's constant presence but is only intermittent, provided that the employee receives at least $75 per month.

The requirement of a weekly rest of 24 consecutive hours or a double rest of 18 consecutive hours is still in effect, but the suspension of this provision for war establishments, which was first made by a resolution of June 4, 1940, and was later incorporated in the order by an amendment of April 17, 1941, is continued in effect. The article in the old order imposing an absolute limit of 55 hours for women and 72 hours for men has been omitted. This provision was suspended for war establishments by a series of resolutions, the first of which was adopted on September 13, 1939, and later by an amendment in the order of April 17, 1941.

As before, a worker must be paid for all the hours or fractions thereof during which he is required to be at the employer's disposal. Time spent at lunch need not be paid for, however, provided a record is kept of it. An employee called to work in an industrial or commercial establishment must, with one or two minor exceptions, be paid for three hours in any one day.

Wages must be paid at least twice per month and any agreement to the contrary is void. When payment is made in cash, the money must be placed in a sealed envelope with the following information on it: name of worker, dates of pay period, hours and overtime, wage rate, category and class, deductions and the amount in the envelope. When payment is by cheque or deposit, the same information must be on the cheque or voucher. Tips are the exclusive property of the worker and may not be counted as wages. Uniforms if required must be furnished by the employer.

Deductions are prohibited except for taxes or war savings, board and lodging, advances on wages, contributions to a pension fund, and in the case of miners in Abitibi and Temiscamingue for tools, goods voluntarily bought at the mine store and medical services. Deductions for single meals may not exceed 25 cents in Zone I, 20 cents in Zone II and 15 cents in Zones III and IV. For lodging daily amounts of 30, 25, 20 and 20 cents may be deducted, and for complete board weekly amounts of $6, $5, $4 and $4. In mining establishments in Abitibi and Temiscamingue, however, 31 cents may be deducted for a single meal, 25 cents for a day's lodging, and $7 for a week's complete board.

Every employer must keep a register of his employees, including names and addresses, competency, category and class, hours of beginning and finishing work, hours and overtime worked in each week, total wages earned and paid, wage rate, pay frequency, deductions, and date of entrance into service. On request he must furnish the Commission with a written statement of any of these particulars. He must post in a conspicuous place all notices furnished by the Commission, and he must furnish every employee who leaves him with a letter of reference stating in what capacity and for what period he was employed.

By notices gazetted April 18 and May 2, Order 16 concerning butter and cheese wholesalers and exporters on the Island of Montreal (LABOUR GAZETTE, 1938, p. 1350) is to remain in force until May 15, 1943, and Order 42 governing workers in peat-bogs (LABOUR GAZETTE, 1941, p. 1110) has been renewed until May 1, 1943.

Quebec Public Building Safety Act

Because of the shortage of labour, the minimum age for elevator operators in public buildings in Quebec has been reduced from 18 to 16 by an order gazetted May 2.

Saskatchewan Workmen's Compensation Act

Six air transport companies have been brought within the scope of the collective liability system of workmen's compensation (LABOUR GAZETTE, 1941, p. 138) by an order gazetted April 30 and effective from April 1.

LABOUR LEGISLATION IN ALBERTA AND SASKATCHEWAN IN 1942

Alberta

DURING the session of the Alberta Legislature, which opened on January 29 and closed on March 19, 1942, an Act was passed providing for supplementary allowances to persons receiving old age and blind persons' pensions, the Industrial Disputes Investigation (Alberta) Act and the Thresher Employees' Lien Act were repealed and amendments were made in statutes relating to miners' wages and workmen's compensation.

Old Age Pensions

The Old Age Pensions (Supplementary Allowances) Act, effective April 1, 1942, authorizes payment of an additional allowance of $5 per month to every resident of the province who on January 1, 1942, was in receipt of an old age pension or a pension for blindness or who thereafter becomes eligible for such pension. The cost of the allowance is to be met from moneys appropriated by the Legislature or, failing such, from the General Revenue Fund. The Act authorizes the Provincial Government to enter into agreements with the Dominion Government for purposes of the Act and to make reciprocal arrangements with other provinces which pay supplementary allowances to persons in receipt of old age and blind pensions.

Conciliation and Investigation in Industrial Disputes

The Industrial Disputes Investigation (Alberta) Act, passed in 1928, was repealed. The Act declared the Industrial Disputes Investigation Act of the Dominion to apply to every dispute of the nature defined in the latter statute which was subject to the legislative jurisdiction of the province. There is a provincial statute, the Industrial Conciliation and Arbitration Act, 1938, which applies to disputes over which the province has jurisdiction.

Thresher Employees' Liens

The Thresher Employees' Lien Act, which was also repealed, gave every thresher employee a lien for wages on the earnings of his employer in the hands of the person for whom the threshing was done.

Security for Wages

The Mining Industry Wages Security Act, which was enacted first in 1928 to ensure the payment of wages to coal miners and was extended in 1938 to cover the operation of mines, quarries, salt works, and the drilling for natural gas or oil, was amended at the recent session to permit its application to lumbering, including all operations carried on at sawmills, box factories, wood-working plants, or by logging and railway tie contractors.

As amended the Act now requires mine operators to deposit each year security for the payment of wages with the Minister and permits the Lieutenant-Governor in Council to apply this provision and others designed to make the Act effective to any of the other industries designated in the Act.

A new section provides that the Minister may submit to the Board of Public Utility Commissioners any application from an employer for exemption from liability to furnish the security required by the Act. The Board is to consider the nature of the employer's operations, his assets, liabilities and the wages payable and, if satisfied with his financial position and his ability to pay his workers' wages, may issue a certificate to that effect to the Minister who may then, by written order, exempt the employer for an indefinite period or for such period as may be set out in the order. The Minister may cancel such exemption at any time, in which case he is to send a copy of the cancellation order by registered post to the employer who must then lodge the necessary security with the Minister within 30 days.

Workmen's Compensation

The Workmen's Compensation Act, 1918, was amended to bring the Order of Railway Conductors in Alberta within its scope. As amended in 1928 the Act permitted classes of railway workers who wished to do so to remain under the Workmen's Compensation Act, 1908, under which the employer was individually liable for compensation as determined by a court. All classes have now voted to come within the state insurance system of workmen's compensation established by the 1918 statute.

Under an amendment in the Provincial Lands Act, the province is given a lien an the plant and equipment of companies operating mineral leases for amounts owing for rental and royalties. Where such a lien has been created and the employer is in default in the payment of assessments under the Workmen's Compensation Act and the Workmen's Compensation Board has a lien

on the property to which the lien under the Provincial Lands Act attaches, the Minister of Lands and Mines may add the amount of such assessments to the amount due the Crown and secured by the lien. Any moneys recovered are to be applied, first, towards the payment of royalties and then pro rata on the claim of the Workmen's Compensation Board and other claims of the Crown secured by the lien until these are paid in full.

Hours of Labour—Time to Vote

A section added to the Edmonton Charter empowers the Council of that City to make by-laws regulating the hours during which milk and cream may be delivered and the hours during which the highways of the City may be used by any person for the retail delivery of such products. It is provided, however, that if there is any conflict between such a by-law and any order made by the Board of Industrial Relations under the Hours of Work Act or any schedule approved by the Minister of Trade and Industry and declared to be in force under the Industrial Standards Act, the provisions of such Order or schedule are to prevail.

Another provision added to the Charter is similar to that in the Alberta Election Act under which every elector is entitled to absent himself from his employment between the hours of 4 and 6 p.m. on polling day without suffering any reduction in his wages or compensation. The section does not apply where the employer gives the employee reasonable opportunity to vote at any other time during polling hours.

Co-operative Associations and Credit Unions

Amendments in the Co-operative Associations Act give associations the powers conferred on companies, other than specially limited companies, under the Companies Act, unless the memorandum of association provides otherwise. The amendments also provide for an alternative representation on the Board of Directors by districts; clarify the provisions as to who shall be members of an association and who shall be entitled to vote and provide for voting by delegates in case that system is used; provide for the issuing of preferred shares without voting privileges; require associations to furnish additional information to the Supervisor of Co-operative Activities; and extend the provisions enabling an association to give and obtain credit in connection with the sale of goods or merchandise and to borrow money for the purpose of giving such credit.

The Co-operative Marketing Associations Act was amended to enable an association to become a member of another association having similar objects.

Changes in the Credit Union Act empower a credit union to change its name, to acquire and dispose of securities which it has taken for loans, and to pay to the executor, administrator, or relatives of a deceased member any funds not exceeding $200 standing to his credit without the necessity of taking out probate. A director or other officer of a credit union is permitted to dispose of his shares but he must have the approval of a two-thirds majority of the officers of the union and he remains liable for a period of four months to the creditors of the union to the full extent of such shares. Authority is given for the incorporation of federations of credit unions.

Resolution

On March 19, a Resolution was adopted urging the Dominion Government to take steps at an early date to revise the Old Age Pensions Act and to establish retirement pensions of $30 per month payable at age 60 without the imposition of a means test and other regulations, the cost to be borne by the Dominion and Provincial Governments in the same proportion as at present. The Resolution further approved the action of the Provincial Government in undertaking to pay a supplementary allowance of $5 per month to old age pensioners whether or not the Dominion Government shares in such payment and urges the Dominion Government to assume its proportion (75 per cent) of the cost of such allowances.

Saskatchewan

In Saskatchewan the Legislature, which was in session from February 19 to April 11, passed an Act for the inspection and regulation of elevators and hoists, revised the law relating to woodmen's liens and amended statutes governing workmen's compensation in factories, steam boilers, weekly rest-day and weekly half-holidays in shops.

Elevators and Hoists

The Elevator and Hoist Act, which will come into force on July 1, 1942, does not apply to any elevator or hoist governed by any other Act or regulations made under it. Elevators and hoists in mines are governed by statutes relating to mines.

No person under 18 years of age may act as operator of an elevator and no employer may permit any such employee so to act.

The Act forbids any person, firm or corporation in charge of an elevator to operate it or allow it to be operated unless he holds a licence, issued by the Chief Inspector of Elevators. Provision is made for appointment of a Chief Inspector and other inspectors who may enter premises and carry out their duties at all reasonable times and prohibit the use or operation of any elevato. found to be in a dangerous condition.

The Lieutenant-Governor in Council may make regulations governing the construction, maintenance, operation and carrying capacity of elevators and of hoists, dumb waiters and other hoisting appliances installed in or about any building and operated by manual power or gravity or both; requiring the posting of warning notices near any such appliance found to be in a dangerous condition; and prescribing the qualifications of elevator operators; and may adopt and constitute as regulations under the Act the Safety Code for Passenger and Freight Elevators issued by the Canadian Engineering Standards Association. Penalties are provided for breaches of the Act and regulations.

Workmen's Compensation

A number of new sections, effective July 1, 1942, were added to the Workmen's Compensation Act. The Workmen's Compensation Board is authorized to order an autopsy, where it considers it necessary to determine the cause of death, and to pay the expenses out of the Accident Fund. If the dependants of the deceased workman refuse to permit the autopsy the Board may reject any claim for compensation.

Provision is made for payment of compensation for frost bite and for the repair or replacement of broken dentures and also for payment of compensation in respect of a child after the age of 16 years, but not beyond the age of 18, if the Board considers it advisable to continue the child's education.

The following were added to the schedule of industrial diseases for which compensation is payable under the Act: Chrome poisoning; cancer arising from the manufacture of pitch and tar; infected blisters caused by any process involving continuous friction, rubbing or vibration; poisoning by carbon bisulphide, carbon dioxide, carbon monoxide, brass, zinc or nickel, or nitrous fumes, or its sequelae; inflammation of the synovial lining of the wrist joint and tendon sheaths; poisoning by nitro- and amido-derivatives of benzene, phenol and their homologues (trinitrotoluene, dinitrophenol, anilin and others) or by chlorinated hydrocarbons (carbon tetrachloride, trichlorethylene, tetrachlorethane, trichlornaphthalene and others) or its sequelae, caused by any process in the manufacture or involving the use of such substances; inflammation, ulceration or malignant disease of the skin or other tissues due to exposure to X-rays, radium or other radio-active substances in any process in the refining or handling of radium or involving exposure to X-rays; cadmium poisoning.

The Board, with approval of the Lieutenant-Governor in Council, may make arrangements with the Boards of Alberta or Manitoba or both, with respect to compensation for industrial diseases of workmen employed in any industry whose operations extend across the boundary into the adjoining province. The Act, as passed in 1929, contained a similar provision relating to accidents under which agreements have been made with both Alberta and Manitoba.

Other amendments were made to tighten the provisions concerning the payment by employers of assessments. Where an employer defaults in payment of an assessment, and a writ of execution issued upon a judgment respecting such assessment is returned with a certificate from the sheriff or his deputy that he was unable wholly to satisfy it, a judge of the Court of King's Bench, on application on behalf of the Board, may issue an injunction restraining the employer from carrying on any industry under Part I until the amount due on the execution and all assessments made by the Board and the costs of the application are paid.

The purchaser of any business or industry, or of the stock or equipment of such industry in bulk, before paying any part of the purchase price or giving any security for such payment, must obtain from the vendor a certificate of the Board that it has no claim on such industry, business, stock or equipment. If the vendor has not furnished the certificate the purchaser is liable to the Board for any moneys due.

Factories

The Factories Act was amended to enable the Commissioner of Labour and Public Welfare, if he considers that the circumstances warrant it and subject to regulations of the Lieutenant-Governor in Council, to grant exemption from the provisions of the Act relating to the employment of children, hours of employment of women and young persons and to certain safety and health provisions.

The sections of the Act dealing with elevators and hoists were repealed, following the enactment of the new Elevator and Hoist Act.

Boilers and Pressure Vessels

Amendments in the Steam Boilers Act make it apply to boilers of twenty h.p. and less in public buildings, office blocks, stores, hotels, and groups of houses heated by one boiler plant, apartment blocks housing more than two families, and other buildings used for public purposes. In rating the working pressure of a boiler the inspector must now take account of its age as well as of its workmanship, material and condition. The provision forbidding the sale or exchange of used boilers unless accompanied by a valid inspection certificate now applies to boilers used for two or more years instead of for two or more seasons as formerly, and to pressure vessels, viz: vessels other than boilers, over six inches in diameter or over one and a half cubic feet in capacity used for containing or storing air, gas, inflammable or lethal liquids or steam at a pressure not exceeding 15 pounds per square inch. The above provision does not now apply to a boiler or pressure vessel sold with the building in which it is used.

Other amendments make it clear that examinations for firemen's certificates need not be written; class as high pressure boilers those carrying a pressure of more than 15 pounds to the square inch, instead of 20 pounds as formerly; and repeal the section forbidding any person not the holder of a welder's certificate to weld a pressure vessel. The section enabling the Lieutenant-Governor in Council to make regulations was revised and such regulations may now cover all refrigerating plants, oxyacetylene plants and pressure vessels. A new provision forbids the cutting of a hole in any boiler or pressure vessel by any person other than an inspector.

Holidays and Rest Days

The One Day's Rest in Seven Act was amended to exempt from its operation employees engaged by reason of an emergency which necessitates immediate remedial action.

A clause added to the Weekly Half-holiday Act provides that where the mayor of a city to which the Act applies, those having a population of 7,000 or over, proclaims any day to be a civic holiday, the Act is not to apply to shops in that city in respect of the week that includes such holiday. The section which provides that the Act shall not apply in respect of a week which includes Good Friday, Victoria Day, Dominion Day or any day appointed by Proclamation to be a public holiday, was amended to make it clear that it covered Proclamations by either the Governor General or the Lieutenant-Governor in Council.

Fair Wages for Street Railway Employees in Moose Jaw

An amendment was made in a statute, enacted in 1932, incorporating the Moose Jaw Transportation Company and confirming an agreement between the City and the Moose Jaw Electric Railway Company, whose rights and franchises the Transportation Company was authorized to acquire. The agreement, which was made binding upon the successors of the Electric Company, contained a clause providing for the payment of fair wages to employees and for referring to the Minister of Labour for Saskatchewan any dispute as to what were the current or fair and reasonable rates of wages. The amendment in the Act provides that any reference in the agreement to the Minister of Labour for Saskatchewan shall be deemed to be a reference to the judge or acting judge of the District Court of the Judicial District of Moose Jaw.

Employment in Street Trades

Identical amendments in the City Act and in the Town Act enable licences for employment in street trades to be issued to women 18 years of age and over but forbid any such licensee to engage in her occupation between the hours of 7 p.m. and 7 a.m.

Woodmen's Liens

The Woodmen's Lien Act, which will come into force on July 1, 1942, is a revision of the former statute with minor amendments relating to procedure.

Co-operative Insurers

Sections added to the Insurance Act provide for the organization or licensing of co-operative insurance companies.

Resolutions

On April 1, 1942, the Legislature agreed to a Resolution that the Dominion Government should be requested to amend the Old Age Pensions Act to provide for an increase in the maximum pension payable under the Act, the Dominion contributing to the increased payments on the same basis as at present and that the Dominion Government should also be requested to inquire into the advisability of establishing a contributory system of old age pensions in lieu of the present scheme.

On April 9, a motion was adopted approving the action of the Provincial Government in setting up a Re-establishment Committee to co-operate with the Government of Canada for the re-establishment of returned men and recommending that the Provincial Government extend this policy by co-operating with the Post-War Reconstruction Committee of the Government of Canada.

INDUSTRIAL HEALTH IN FACTORIES

Report of Committee of British Medical Association

A COMMITTEE of the British Medical Association on Industrial Health in Factories in a recent report submitted as its first recommendation that there should be in every factory, large or small, arrangements for the medical supervision of the workers. It was pointed out that 31½ million weeks' work was lost in one year in Britain through ordinary ill-health. The industrial loss from accidents was over £30,000,000 a year. Individual firms with medical supervision reported sharp drops in days lost and accidents. One had an annual loss of 3·75 to 5·25 days for each man as compared with the national average of 10 days. Similarly the time-loss for women ranged from 4·5 to 7·9 days a year which was considerably below the national average of 12 days.

The Committee recommended:

> that more emphasis should be placed on the preventive aspects of industrial medical practice, that there should be closer association between the medical profession and industry, and that the part played by industrial factors in the causation of ill-health and disease should be more fully appreciated by both medical practitioners and employers.

Factory medical supervision was broadly defined by the Committee:

> It implies the supervision of the health of the individual worker in his industrial environment; the prevention as far as possible of physical and mental illness; a service for the initial treatment of injury and sickness; and an efficient medical liaison between the factory and outside medical services, such as the patient's panel doctor, the hospital, the rehabilitation services and the public health authority.

The report stressed that the industrial medical officer should have some knowledge of industrial organization and factory methods as well as an acquaintance with the social conditions prevailing in an industrial community. He should also

> know something of industrial toxicology and the standard methods of preventing industrial injury and disease....The closest liaison should be maintained with production and plant engineers.

The duties of the factory medical officer are to supervise health, working conditions, accident service, rehabilitation, A.R.P. services and to study and control the occupational hazards peculiar to the industry in which he is employed. Health education and mental health and psychological adjustment programs may also be undertaken by the factory doctor.

Among the working conditions which the Committee recommends that the medical officer should consider are sanitation, ventilation, heating, lighting, seating, feeding arrangements, hours of work, timing of breaks and rest pauses, transport facilities, distance from work and methods of payment.

The factory doctor should see that jobs are allotted according to physical capacity. Workers in dangerous processess should be given frequent medical examinations. He should pay special attention to the conditions, both of a physical and psychological nature, under which women and young persons are employed. It is an established fact that the sickness rate is always higher for women than for men, due not so much to physical differences as to the added strain imposed on women who combine work with running a home. The Committee recommended that women cease employment four weeks before confinement and declard "it is desirable in the interests of both mother and child that the woman should remain away from work for a longer period than four weeks after the birth of the child".

The Committee declared that

> much more emphasis needs to be placed in medical education on the relationship of industry to health and disease, and efforts should be made to increase the practitioner's awareness of industrial factors in disease.

Education campaigns in the form of lectures, visits to factories, and literature should be developed for this purpose. The factory doctor should freely co-operate and exchange information with medical practitioners and services outside the factory to co-ordinate his work with theirs. The nature of the industry will determine whether a whole or part time medical officer is needed. It was suggested that two or three small firms could share one medical officer.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Visit of United States Social Security and Unemployment Compensation Officials—Progress of Registration—Marked Growth of Insurance Fund—Report of Employment and Claims Offices—Employment Conditions at End of April

A DELEGATION of seven officials, five from the New York State Division of Placement and Unemployment Insurance and two from the Social Security Board at Washington, spent three days in Ottawa and two in Montreal at the end of April to make a first hand study of certain phases of the Canadian unemployment insurance plan.

The members of the delegation were: Messrs. William Arnstein, of the New York State Budget Director's Office; J. C. Cheles, Assistant Director, Field Audit Section, State Controller's Office, New York; Milton O. Loysen, Executive Director, Division of Placement and Unemployment Insurance; Paul Mayer, Director Tax and Wage Records Bureau; Milton Bass, Assistant Director, Tax and Records Bureau; W. C. Cameron Edey and Charles W. Putnam, Representatives of the Social Security Board.

The possibility of extending the coverage of American unemployment insurance laws to employers of one person, has brought to the forefront of discussion the possibility of using simpler contribution techniques than the wage reporting systems currently in use in New York State. The discussions therefore centred around the three methods of collecting contributions to the insurance fund in use in Canada, namely the stamp system, the metering method and the bulk payment method. Visits were paid to industrial plants where these were in operation, as well as to the Employment and Claims Offices in Ottawa and Montreal.

Much interest was shown also by the New York visitors in connection with the Canadian insurance inspection method of employers' records, and the setting up of reciprocal arrangements for insured workers who crossed the International border. The conference was of mutual interest and profit and the delegation expressed their satisfaction in having the opportunity to study Canadian methods.

Insurance Registration

Reports from the regional offices of the Unemployment Insurance Commission show that 161,026 employers were registered throughout Canada at the end of March, an increase of nearly 10,000 over the preceding month. These employers requisitioned 3,096,907 insurance books for their employees.

A progress report of the registration of employers and of insurance books requisitioned provided the following figures by regions.

Region	Employers Registered	Books Requisitioned
British Columbia ...	13,316	255,550
Prairie	30,250	433,371
Ontario	60,804	1,236,928
Quebec	44,904	928,652
Maritimes	11,752	242,406
Total.....	161,026	3,096,907

Unemployment Insurance Fund

At the end of the fiscal year, March 31, 1942, the Unemployment Insurance Fund amounted to $45,273,584.72, an increase of $10,806,068.33 from February 28, 1942.

The contributions were divided as follows:

Unemployment Insurance	
Stamps	$22,451,711.27
Meter Credits	7,210,241.11
Bulk Payments	7,723,741.65
Government's Contribution	7,473,531.93
Interest on Investments	411,490.00
Contributions—Miscellaneous ..	2,832.33
Contributions—P.C. 7633	36.43
Total Receipts	$45,273,584.72

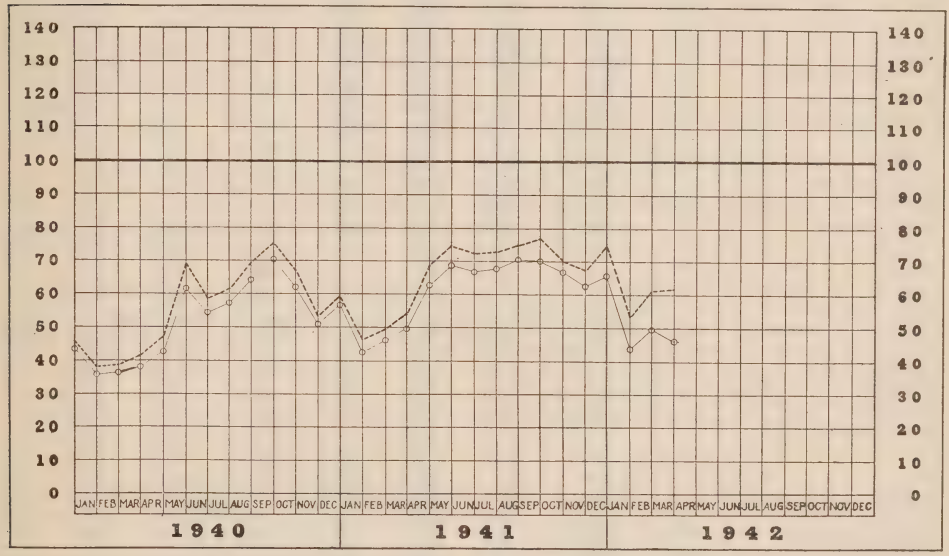
Report of Employment and Claims Offices for March, 1942

Reports of the Employment and Claims Offices of the Unemployment Insurance Commission for the month of March, 1942, showed a gain of over 7 per cent in the average daily placements as compared with those of the preceding month, but a decline of nearly 27 per cent in comparison with the records covering the corresponding period a year ago. Increased placements over February were noted in manufacturing, services, construction, agriculture, trade and mining, the largest increase being in manufacturing; none of the gains, however, was outstanding. Logging registered a moderate decline and nominal losses were ap-

parent in transportation and finance. When a comparison was made with March, 1941, heavy reductions were reported in services and construction; recessions also were shown in agriculture, logging and transportation, that in the last named group being minor only. Improvement was recorded in manufacturing, trade, mining and finance, the most noteworthy being in the first named division.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered, each month, at employment offices throughout Canada. It will be seen from the graph that the curve of vacancies in relation to applications rose less than one per cent during the month, while that of placements declined nearly three points, the levels standing at 61·5 and 46·9, respectively, in comparison with ratios of 61·1 and 49·7 in February and with 54·0 and 49·4 at the close of March a year ago.

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during March, 1942, was 1,316, as compared with 1,148 during the preceding month and with 1,495 in March a year ago.



The average number of applications for employment received daily by the offices during the month under review was 2,140, in comparison with 1,879 in February and with 2,768 during March last year.

The average number of placements made daily by the offices of the Commission during March, 1942, was 1,003, of which 686 were in regular employment and 317 in work of one week's duration or less, as compared with a total daily average of 934 during the preceding month. Placements in March, 1941, averaged 1,367 daily, consisting of 847 placements in regular and 520 in casual employment.

During the month of March, 1942, the offices of the Commission referred 28,564 persons to vacancies and effected a total of 26,062 placements. Of these, the placements in regular employment were 17,818, of which 13,485 were male and 4,333 female, while placements in casual work totalled 8,244. The number of vacancies reported by employers was 21,385 for men and 12,815 for women, a total of 34,200, and applications for work numbered 55,617, of which 39,449 were from men and 16,168 from women. Reports for February, 1942, showed 27,546 positions available, 45,075 applications made and 22,410 placements effected, while in March, 1941, there were recorded 38,847 vacancies, 71,967 applications for work and 35,521 placements in regular and casual employment.

* 900 placements effected by offices now closed.

The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (3 months)	46,806	23,467	70,273

NOVA SCOTIA AND PRINCE EDWARD ISLAND

During the month of March, 1942, positions offered at Employment and Claims Offices in Nova Scotia and Prince Edward Island were over 5 per cent fewer than in February, but 43 per cent more numerous than during the corresponding month a year ago. Placements, likewise, were more than 6 per cent below those of the preceding month, but 39 per cent above March, 1941. The increase in placements over March last year was due to moderate gains in construction and manufacturing, as minor variations only were reported in all other industrial divisions. Placements under services numbered 1,140, construction 1,080, manufacturing 427 and trade 101. There were 1,634 men and 344 women placed in regular employment.

NEW BRUNSWICK

The demand for workers, as shown by orders listed at Employment and Claims Offices in New Brunswick during March, was nearly 9 per cent higher than in February, but almost 28 per cent less than in March last year. Placements were nearly 8 per cent in excess of those of the preceding month, but 37 per cent lower than in the corresponding period a year ago. Services, with a fairly heavy reduction in placements from March, 1941, was responsible for the loss reported, as changes in all remaining groups were very small. Placements by industrial divisions included: services 428; construction 89 and trade 82. During the month 162 men and 57 women were placed in regular employment.

QUEBEC

Employment offices in the Province of Quebec were notified in March of 40 per cent

more vacancies than in February, but 60 per cent fewer than in March, 1941. Placements, likewise, showed a 39 per cent gain over the preceding month, but a 75 per cent loss from the corresponding period last year. The decline in placements from March a year ago was owing to heavy losses in services, construction and logging, with more moderate declines registered also in manufacturing, transportation and trade. Industrial divisions in which the majority of placements were effected included: services 990; manufacturing 974; construction 556 and trade 136. Placements in regular employment numbered 1,452 of men and 774 of women.

ONTARIO

During March, vacancies offered through Employment and Claims Offices in Ontario were 22 per cent above those of the preceding month and over 6 per cent higher than in March last year. Placements were 19 per cent more numerous than in February, but over 5 per cent fewer than in the corresponding month of 1941. With the exception of a fairly heavy loss in construction and more moderate declines in services and agriculture, all groups showed increased placements over those of March a year ago, the highest gain being recorded in manufacturing, increases in the remaining groups, logging, trade, mining, transportation and finance, not being outstanding. Placements by industrial divisions were: manufacturing 3,874; services 3,751; construction 1,750; logging 759; trade 704; transportation 340; agriculture 305 and mining 141. During the month 5,901 men and 1,987 women were placed in regular employment.

MANITOBA

Employment opportunities, as indicated by orders received at Employment and Claims Offices in Manitoba during March, were 18 per cent better than in February and 26 per cent above those of March a year ago. Placements were 7 per cent in excess of the preceding month, but over 5 per cent below the corresponding period last year. The decline in placements from March, 1941, was almost entirely due to recessions in construction and agriculture, although these were largely offset by fair gains in logging and manufacturing. Industries in which employment was found for more than 100 workers included: services, 856; logging, 460; manufacturing, 328; agriculture, 145; construction, 136 and trade, 100. During the month 1,032 men and 275 women were placed in regular employment.

SASKATCHEWAN

Orders listed at Employment and Claims Offices in Saskatchewan during March showed an increase of 61 per cent when compared with those of the preceding month, but a decline of nearly 7 per cent in comparison with March, 1941. Placements were 25 per cent more numerous than in February, but 37 per cent fewer than in the corresponding month a year ago. Considerable variation in placements in industrial divisions took place from March last year, the most noticeable being the declines shown in services and agriculture, which were responsible for the decrease for the province as a whole. The majority of the placements were effected in services and agriculture—555 for the former and 162 for the latter. Placements in regular employment numbered 357 of men and 228 of women.

ALBERTA

Opportunities for employment, as shown by calls received at Employment and Claims Offices in Alberta during March, were 36 per cent in advance of those of February, 1942, and 13 per cent higher than in March, 1941. Placements recorded a gain of over 12 per cent in comparison with the preceding month, but a loss of 14 per cent from the corresponding period a year ago. Reductions in placements from March, 1941, took place in agriculture, manufacturing, services and construction and gains in trade, logging and mining, most of which were negligible in volume. The greatest number of placements recorded during the month was in the following industries: services 500; logging 347; agriculture 344 and construction 225. There were 1,099 men and 214 women placed in regular employment.

BRITISH COLUMBIA

There was an increase of 32 per cent in vacancies when compared with the preceding month and of 39 per cent in comparison with the corresponding period a year ago. Placements were 25 per cent higher than in February and over 2 per cent above those of March, 1941. With the exception of a fair gain in manufacturing and smaller losses in construction and agriculture, changes in all other groups were small. Industrial divisions in which most of the placements were effected included: services 1,301; manufacturing 848; construction 781; trade 112 and transportation 106. During the month 1,848 men and 454 women were placed in regular employment.

Movement of Labour

During the month of March, 1942, Employment and Claims offices effected 17,818 placements in regular employment, of these 1,207 were of persons to whom was granted the reduced rate, 644 proceeding to centres within the same province as the despatching office and 563 to other provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4, is granted by the railway companies to bona fide applicants at the employment offices, who may desire to journey to distant employment, for which no workers are available locally.

In Quebec Province during March, 131 persons travelled by this means, the majority of whom were rock drillers, truck drivers, mechanics and labourers for a dam construction project in the Chicoutimi zone. Of these, 13 were sent by Montreal, 7 by Quebec, 59 by Rouyn and 52 by Thetford Mines. Ontario offices issued 256 certificates for reduced transportation entirely to provincial points. For employment within their respective zones, Fort William despatched 31 bushmen and one cook; Port Arthur, 132 bushmen, 20 teamsters, 11 camp builders, 11 cookees, 8 truck drivers, 7 cooks, 3 dam builders, 2 blacksmiths, 2 drillers, one shovel runner, one carpenter, one foreman, one sawyer, one sawyer's helper, one contractor, one mucker, one tractor driver and 15 labourers for the Hydro Electric; Sudbury, 2 bushmen and one mill hand, and Windsor, one pipe fitter. One labourer for a munitions plant also was sent from Oshawa to Sudbury. In Manitoba, 562 persons benefited by the reduced rate, 6 of whom were bound for provincial situations and 556 outside the province. Of the former, transferred within its own zone by Dauphin were 3 bushmen and by Winnipeg 2 farm hands, while Winnipeg sent to Brandon one hotel clerk. Interprovincially the following workers from Winnipeg proceeded to Yorkton, 2 cooks and one bushman and to Port Arthur, 376 bushmen, 32 teamsters, 30 cookees, 20 miners, 11 cooks, 8 truck drivers, 2 carpenters, one oiler, one engineer, one pipe fitter, one barber, one foreman, 4 mine labourers and 65 labourers for the Hydro Electric. In Saskatchewan only 7 certificates were issued and those were for bushmen going from Prince Albert to Prince George in British Columbia. Alberta transfers were 252 in number, all provincial and all for persons journeying to points within the territory covered by the despatching office. Of these one aircraft repairer went from Calgary and from Edmonton proceeded 174 bushmen, 12 mill hands, 17 miners, 11 cooks, 8 carpenters, 3 farm hands, 3 cookees, 3 teamsters, 3 household workers, 2 mill labourers, one sheet metal worker, one foreman, one assistant welder, one sawyer, one plater, one timekeeper, one electrician, one carpenter's helper, one blacksmith, one saw filer, 3 mine labourers and 2 water transportation workers.

Of the 1,207 workers who travelled at the reduced rate during March, 1942, 998 were carried by the Canadian National Railways, 154 by the Canadian Pacific Railway, 52 by the Quebec Central Railway and 3 by the Northern Alberta Railway.

Employment Conditions at the end of April

Placement activities as reported by Employment and Claims Offices during the month of March, 1942, together with statistical summaries for that period, are covered by an earlier section of this report. Later reports received from these offices indicate that conditions at the end of April were as follows—

Farmers in some parts of the Maritime provinces were engaged in spring ploughing and planting, good weather having helped greatly, while in other localities, where the ground was still frozen, field operations had not commenced; farm labour, however, was scarce and wages somewhat higher. The lobster season had opened, but ice still remaining in the Gulf proved rather a menace to any traps located there. Numerous boats engaged in herring fishing had done well and good landings of cod also had been made. In Nova Scotia, lumbering operations were confined chiefly to mill work, but in New Brunswick logging was active, except where logging and pulpwood contracts had been completed. River driving had not yet started. The majority of coal mines operated steadily, although some temporary shut-downs were reported and one colliery, affecting one hundred men, had been closed permanently. Manufacturing plants were operating at capacity. At Saint John the spring impetus lent to lime and fertilizing companies in the district was the means of much activity and called for labour, which was difficult to supply. Construction was active and projects in the course of erection were progressing steadily; thus work was available for many good labourers and tradesmen. A sharp decline in permits for private building was reported at Moncton, due to new restrictions and priorities on building materials. Passenger traffic, by rail and boat, was heavy and considerable activity

was in evidence on the waterfronts, wharfage facilities in some cases being considerably over taxed and a definite shortage of longshoremen reported. Trade was good and collections fair. There was still a very marked absence of any domestic help desirous of making permanent contacts, so that householders had to content themselves with casual workers, or applicants who were inexperienced.

Few requests for farm labour were reported in Quebec province, although field operations were starting. Logging was about completed for the season; many jobbers, however, were still engaged in woodcutting and in some localities river driving had begun. In Chicoutimi district many woodsmen had returned to their farms, found employment on the drive, or been sent to construction work at Arvida, Shipshaw and the Saguenay airport. Mining was active and prospecting continued with promising results. Some quarries were shipping ore, but lack of electric power proved a handicap in final production. Aluminum plants were operating at full capacity and other industries, with the exception of some pulp and paper mills, were very busy, there being an ever increasing call for skilled and semi-skilled factory labour. Textiles, however, were handicapped by scarcity of raw materials. In shipbuilding a substantial demand for boilermakers, machinists and ship repairmen existed, with no suitable candidates available. Building was active; many large projects were underway, but a shortage of labour was felt in nearly all lines of construction. Wartime housing programs were progressing rapidly. With the opening of navigation, lake boats, schooners and small coastal ships were sailing with cargoes of lumber. Men had been sent out also as section hands on railway maintenance. Trade was favourable. Few experienced applicants were registered for household service, so that placements in this line were difficult to effect.

Seeding was well advanced in Ontario, but farm help very scarce. Orchards in the Niagara peninsula were in bloom and asparagus cutting had started unusually early. In order to relieve the shortage of help in Essex county, a camp for boys was opened, some being selected from Windsor and others chosen from various parts of Western Ontario. Arrangements in other sections of the province were being made to allow older rural students to leave school as early as possible, so that their help might be given to seasonal work, the increase in the use of women on munitions diminishing the numbers of those available for farmerette camps. There was also an unremitting demand for bushmen in the far north, both for woods operations and sawmills. At the latter, skilled mechanics, edgers and firemen were needed. River driving also had started, although the water was somewhat low, owing to a comparatively light rainfall during April. All available miners were being rapidly absorbed, particularly machinists, steel sharpeners, machine runners and muckers. Wartime production plants and other essential industries were operating at a steady level and many mechanics could be readily placed. In highly skilled trades there are practically no unemployed, so that the training of semi-skilled men appears the only possibility of relieving the scarcity, mechanics, bench hands, lathe operators and acetylene welders being particularly requested. There was also a pressing need for men of strong physique for foundry work. The recent trend toward the placement of women in industry and the taking over of duties formerly performed by men had absorbed nearly all surplus female help; in addition, the calling up of men to the Armed Forces and the seasonal movement of others to the farm had also resulted in a contraction of applicants for industry. An increased demand continued for construction workers and difficulty was encountered in filling all orders; lack of materials also caused delays on some projects already started. Maintenance work on highways and railroads was getting underway and extra gangs sent out. Traffic was exceptionally heavy and all transportation facilities were taxed to the utmost. Grain shipments were brisk and on the Great Lakes it was exceedingly difficult to secure men for loading and unloading boats. Trade was good, although some retailers reported shortages of supplies and inability to replace disappearing stocks of merchandise; this, however, had not caused reduction in staffs. The demand for experienced household help far exceeded the supply, wages, as paid in industry, attracting women away from former employment in domestic service. Hotels and restaurants also were finding it very hard to secure adequate employees as seasonal work began.

In Manitoba and Saskatchewan wet weather had hampered farming operations, although requests for farm hands had increased; in Alberta, special efforts made to supply the spring seeding requirements were successful, but choremen difficult to obtain. Experienced sheepmen also were lacking. The call for bush help was maintained and river driving had commenced. Mining was active at Flin Flon and a good demand existed for men who were physically fit and within the necessary age limits, but coal mines in Alberta showed seasonal slackness. Trappers returning from the rehabilitated muskrat fur farming area,

east of The Pas, reported only fair catches, but skins of excellent quality. Manufacturing plants were very busy and more women were being taken into industry to replace male workers who had joined the Armed Forces. Requests for experienced sawmill workers were numerous, particularly edgermen, millwrights and sawyers. Some building construction in Winnipeg was at a standstill, as contractors' priority numbers were not being released and lack of contracts for private or civilian enterprises caused an additional slowing down. Work at airports, however, was proceeding and alterations and repairs furnished adequate employment for all available men. Maintenance work had started on highways and there was considerable movement of extra gang labour for railways. Transportation was active and trade good. Difficulty existed in filling orders for experienced household help, owing to the scarcity of applicants for day work, as well as for that by the week or month.

Shortage of farm help was prevalent throughout British Columbia and efforts were being made to secure either more female workers or college boys, although the latter considered the wages offered too low to accept. Nearly all fruit packing houses and cold storage plants were finishing reconditioning of equipment and buildings and were rehiring former employees for general clean-up work. Production in the logging industry, especially airplane spruce, was below requirements, owing to lack of help. The same situation also prevailed in connection with sawmills and several women had been placed there as substitutes for male labour. Halibut fishing at Prince Rupert was in full swing and had drawn many workers from drydocks and other local industries. There was a continued demand for miners, both for base metals and coal. In the latter case the increased call was very largely owing to the turnover from oil to coal, not only in industrial plants, but also in shipping and road transportation. Manufacturing concerns were busy and many applications were received from young people for training in aircraft production. Pulp and paper mills also were operating under difficulties on account of shortage of help. In an effort to overcome this situation, a readjustment is being considered in the grading and rating of men, which if put into effect, will give higher wages to helpers and semi-skilled men. Work was progressing on the West Kootenay Power and Light project and workers were being employed as rapidly as accommodation and equipment permitted. Large orders for carpenters and labourers for Northern British Columbia had been received at Vancouver and in order to secure the men required, the co-operation of the Prairie region had been requested. There was an acute shortage of all labour at shipyards, especially steel workers, and classes were being held to train employees for more skilled positions. Maintenance men had been placed on railways and there was a number of vacancies listed for the British Columbia Coastal Service. Trade was brisk, female workers replacing male in many instances. Practically no capable domestics were available and wages in general not attractive. Hotel and restaurant help was lacking, as numerous women previously employed in domestic service were seeking clerical or factory positions.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1941

Extent of Canadian War Effort Reflected in Report of Dominion Bureau of Statistics

THE gathering momentum of the Canadian war effort is reflected in the annual report on employment in Canada during 1941, published by the Dominion Bureau of Statistics. The only general decline recorded in the twelve months was recorded at January 1, a movement which accorded with that invariably indicated at the first of the year in the period since 1920, but which was decidedly less extensive than usual. The series of eleven monthly advances in the year under review was without parallel, both in duration and also in the magnitude of the additions to the reported labour forces. The largest number of monthly gains recorded in any earlier year was nine, while in comparatively few years has the general tendency been upward on so many as eight occasions, improvement had been reported in seven months of 1940.

The employees taken on by the co-operating establishments in the period of expansion in 1941 numbered nearly 350,000, a gain which exceeded that noted in any earlier year of the record. The index, based on the 1926 average as 100, rose from 134·2 at January 1, to 168·8 at December 1, or by 25·8 per cent. In 1940, the increase recorded from January 1, to December 1 had approximated 20 per cent, the index rising from 116·2 at the former, to 139·1 at the latter date. The average advance from January to December in the period, 1921-1940, was 9·2 per cent.

Earnings

The unprecedented gains in industrial employment in 1941 were accompanied by important increases in the reported weekly earnings. As from the last pay periods in March, statistics of payrolls were collected to complement the data on employment. The information on earnings obtained in the first two monthly enquiries was incomplete and has been disregarded. Between June 1 and December 1, the weekly payrolls disbursed rose by 19·6 per cent, while the employees increased by 10·4 per cent. As a result of the dilution of labour (a feature of growing importance as the available supply of experienced workmen diminishes), the general increase in the per capita weekly earnings in the seven months was smaller than that shown in the aggregate payrolls. Nevertheless, the average rose from $25.25 paid at June 1 for services rendered in the final week of May, to $27.32 paid at December 1 for the preceding week, or by 8·2 per cent.

The Dominion Bureau of Statistics tabulated an aggregate of 151,069 reports on employment during 1941, a monthly average of 12,589. The employees of the co-operating establishments averaged 1,514,953, the maximum number reported being 1,688,005 at the beginning of December. In 1940, the indicated staffs had averaged 1,215,431. From the 1941 low point to the peak of employment at December 1, there was a gain of well over one-fourth in the personnel of the larger employers, while in the preceding year, the increase between the minimum and the maximum had been just under one-fifth.

Based on the 1926 average as 100, the annual index in 1941 was 152·3; the 1940 figure had been 124·2, previously the highest in the record. For each 1,000 persons employed, on the average, by the firms furnishing data in 1940, 1,226 were at work in 1941. As compared with 1939, the ratio was 1,337 per 1,000 in favour of the year under review.

The expansion in industrial employment in 1941 was widely distributed, both geographically and industrially. All provinces, the eight cities for which data are segregated, and all industries included in the current surveys, generally reported greater activity than in 1940; in most cases, the levels of employment were also higher than in any preceding year.

Employment in Provinces and Cities

In the provinces, the increases recorded in the personnel of the co-operating employers ranged from 10·8 per cent in Saskatchewan and 13·9 per cent in Prince Edward Island, to 23·8 per cent in New Brunswick and Ontario, and 29·4 per cent in Nova Scotia. Firms in the more highly industrialized provinces of Quebec and Ontario added the largest numbers of persons to the working forces, although their percentage gains were not the greatest; the proportion of workers employed by the establishments reporting in Quebec and Ontario to the total in the Dominion has shown no significant change in the last three years.

The highest level of activity on record was indicated in the eight leading industrial centres—Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver. In these cities taken as a unit, employment during 1941 showed greater improvement than was elsewhere noted, the percentage gain over 1940 being 25·3 per cent, as compared with a rise of 21 per cent in other parts of the Dominion. Despite this greater proportionate advance in the above-named cities, an index calculated for these centres as a unit continued rather below the general index in the Dominion.

Employment by Industries

Almost without exception, employment on the whole in the various industries was in greater volume in 1941 than in 1940 or any earlier year. The manufacturing and non-manufacturing divisions shared in unequal proportions in the advance. The former, influenced more directly by the stimulus of the war effort, showed particularly impressive expansion, the personnel of manufacturing establishments being increased by 28½ per cent; the gain in the non-manufacturing classes was 15·4 per cent.

The movement in manufacturing was buoyant from January 1 to the close of 1941. This period was unique both in the duration and the extent of the growth, which resulted in the establishment of successive new all-time highs commencing with February 1. At the peak of employment (at December 1), the number employed by the co-operating factories was 979,881. The index was then 188·4; where 1,000 men and women had been at work in these plants at December 1, 1940, 1,302 were employed a year later. As compared with the situation in the early months of the war, the advance is even more striking, the ratio at December 1, 1941, being 1,542 per 1,000 employees reported at the same date in 1939.

Effect of Wartime Activity

The effect of wartime demands on industry is shown by the unprecedented activity in the production of durable goods (comprising iron and steel, non-ferrous metals, electrical apparatus, lumber, clay, glass and stone and

musical instrument manufacturing) in which employment rose by 46·5 per cent in 1941 over 1940. This gain considerably exceeds that of 28·3 per cent indicated in manufacturing as a whole, and 15·2 per cent in the production of non-durable goods in the same comparison. In the durable goods class, the greatest increases were in iron and steel and non-ferrous metals, while in the non-durable goods division, the advance in chemicals was outstandingly large.

Among the non-manufacturing divisions, logging reported greater employment than in 1940 or any other year since 1920, except 1937, when the index was slightly higher. Towards the end of 1941, shortage of labour affected the situation in logging, with the result that the seasonal gains in the last few months were below normal. A relatively high level of activity was indicated in mining, communications, transportation, construction and maintenance, services and trade. The 1941 annual indexes in mining, services and trade were the highest on record; that in transportation was the maximum recorded since 1930, while the communications figure was at the peak for the years since 1931. The volume of employment in construction as a whole was the greatest in the decade. Most of the activity was in the building division, to meet wartime needs.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

IN view of the transference of the functions of the Employment Service of Canada to the Unemployment Insurance Commission, information formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will now be found in the preceding article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for March, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of April."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting March 1, was 12,923, the employees on their payrolls numbering 1,651,067, compared with 1,654,191 (revised) in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 2,187, having an aggregate membership of 333,176 persons, 4·5 per cent of whom were without employment on April 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of March, 1942, as Reported by Employers

A further slight decline in employment was reported to the Dominion Bureau of Statistics at the beginning of March, when the 12,923 establishments furnishing data indicated a staff of 1,651,067 men and women, as compared with 1,654,191 in the preceding month. This loss of 3,124 workers, or 0·2 per cent, lowered the index number from 165·4 at the beginning of February, to 165·1 at March 1; it was then 22 per cent higher than at the same date in 1941.

A slackening in industrial activity has frequently been indicated at the beginning of March; the latest reduction was rather less than normal in the experience of the years 1929-1937 from which the factors of seasonal

adjustment are computed. Consequently, the seasonally-corrected index number showed a small increase, rising from 171·8 at February 1, to 172·1 at the date under review. These figures, with that of 172·3 at January 1, 1942, are the highest in the record.

The contraction at the beginning of March involved the release of a rather smaller number of workers than was laid off in the preceding month. The loss again took place wholly in the non-manufacturing division, the reductions in construction and trade being most pronounced. Logging, mining and transportation were also generally quieter. On the other hand, a further important advance was shown in manufacturing, in which the reported employees, for the first time in this record exceeding the million mark, numbered 1,018,653, as compared with 995,170 at February 1. The increase of 23,483 men and women, or 2·4 per cent raised the index to a new maximum of 195·7 at March 1; previously the high figure was that of 191·2 in the preceding month.

The increase in manufacturing at the beginning of March was seasonal in character, but with one exception, was greater than that reported in any earlier March in the record.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

As a result, the seasonally-corrected index resumed its upward movement, following a slight decline in the preceding month. The latest figure was 199·9; at February 1, it had stood at 198·4, while the previous maximum was that of 199·6 at January 1, 1942.

The largest gains at the date under review were those of 11,000 persons in iron and steel and 10,500 in chemical manufacturing. Other important additions to the personnel were reported in non-ferrous metals, lumber, textiles, miscellaneous manufactured products, pulp and paper and leather factories. Although employment in textile plants continued at an unusually high level, the increase recorded at March I was decidedly less-than-usual for the time of year. The expansion in iron and steel, on the other hand, greatly exceeded the normal.

Curtailment as compared with February I was noted in the food, tobacco, clay, glass and stone, rubber and electrical apparatus divisions; the losses in some cases were seasonal, while those in the last two groups were largely due to shortages of materials.

The co-operating establishments, including those in the finance group, reported the disbursement of $47,986,641 in weekly payrolls at March 1, as compared with $47,615,112 at February 1. This was an increase of 0·7 per cent. The per capita average rose from $27.73 at February 1, to $27.99 at March 1. The gain took place largely in manufacturing, there being a decline, on the whole, in employment

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at Mar. 1 and at Feb. 1, 1942, by Establishments furnishing Statistics, and Weekly Earnings of these Employees as Paid on or about Mar. 1 and Feb. 1.

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

and earnings in the non-manufacturing group. The losses were undoubtedly seasonal in character. The average in manufacturing rose from $28.39 at February 1 to $28.58 in the latest period of observation.

The Course of Wartime Employment

As stated in recent reports on employment and earnings, the value of any comparison of the volume in employment as presently existing with that indicated at the opening of hostilities has largely been vitiated by the seasonal movements in industry from the early autumn to the winter; industrial activity ordinarily reaches its peak for the year about September 1 or October 1, after which seasonal curtailment in succeeding weeks usually reduces employment in the first quarter to its lowest point in the twelve months. In view of these facts, the present comparison of the situation indicated at March 1, 1942, with that at September 1, 1939, is greatly abbreviated.

In the first thirty months of the war, employment in the Dominion has shown an extremely important growth; the interruptions in the generally upward movement have been wholly due to seasonal contractions in the industries particularly subject to such influences. These factors have recently reduced employment in a number of industries in both manufacturing and non-manufacturing classes, but nevertheless, from September 1, 1939, to March 1, 1942, the general index has risen by 38 per cent. The magnitude of this gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the general index rose only by approximately 28 per cent.

The manufacturing industries have for obvious reasons, shown a greater response to war-time demands than any other class. From September 1, 1939, to March 1, 1942, the index number of employment in factories rose by 69·7 per cent while the general gain in the non-manufacturing groups, despite seasonal curtailment in some branches (notably construction) was 6·1 per cent.

Particularly impressive increases have been reported in the durable goods industries, in which the index number has advanced from 100·4 at September 1, 1939, to 225·5 at March 1, 1942, or by 124·6 per cent. The number of persons employed in this category constituted over 52 per cent of all those reported in manufacturing at March 1, 1942, a proportion greatly in excess of that of 40 per cent engaged in the durable goods industries at the outbreak of hostilities. Employment in the non-durable goods class has also shown large gains during the period of the war, the index rising from 126·6 at September 1, 1939, to 173·3 at March 1, 1942. This was a growth of 36·9 per cent. Activity in these industries is usually relatively quiet during the winter, owing to seasonal slackening in some divisions,

notably the food group. In spite of this factor, (which also operates in the case of some lines in the durable goods category) employment in the large majority of manufacturing industries was considerably more active at the latest date than it was at September 1, 1939.

In spite of the large seasonal losses recently recorded in construction, trade and some other classes, employment in the non-manufacturing group as a whole was, as already stated, 6·1 per cent higher than at September 1, 1939. The effect of the seasonal changes in these classes is shown in the decline in this rate of increase from 14·6 per cent at September 1, 1941, over September 1, 1939, when the seasonal factor did not enter into the situation. The following are the percentage increases

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	Mar. 1 1942	Feb. 1 1942	Mar. 1 1941
Manufacturing	**61·7**	**195·7**	**191·2**	**150·8**
Animal products—edible	1·9	162·0	162·5	148·5
Fur and products	0·2	113·1	112·7	110·6
Leather and products	1·8	142·4	141·0	126·9
Boots and shoes	1·1	133·4	132·6	123·2
Lumber products	3·5	109·7	107·4	94·9

All Industries	**100·0**	**165·1**	**165·4**	**135·3**

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

in the index numbers in the indicated industries in the first thirty months of the war; logging, 328·4 per cent, mining, five per cent, communications 14·8 per cent, transportation, 8·3 per cent, services, 11·5 per cent and trade, 12·5 per cent. In construction, on the other hand, there was a decline of 31·9 per cent; this took place wholly in the highway division, and to a large extent, resulted from the need to postpone all but essential work until after the war. It was also seasonal in character.

Statistics of Earnings

The results of the twelfth tabulation of statistics of weekly earnings as reported by establishments ordinarily employing 15 persons and over, are contained in the present report. The figures are preliminary.

At the first of March, the sum of $46,093,114 was distributed to the 1,651,067 persons on the staffs of the 12,923 co-operating establishments in the eight leading industries for which provincial data are given in Table I; at February 1, these firms had reported 1,654,191 employees, whose earnings in the week preceding aggregated $45,746,652. A decline of 0·2 per cent in the personnel was thus accompanied by an increase of $346,462, or 0.8 per cent, in the weekly payroll. The per capita weekly average, at $27.92, was higher by 27 cents than that indicated in the preceding report, being also the largest average yet indicated; previously, the highest figures were those of $27.65 at February 1, 1941, and $27.32 at December 1, 1941.

In the last report on employment and payrolls, the earnings of the 1,653,942 employees of the 12,891 establishments whose returns were then tabulated were given as $45,746,190, paid on or about February 1 for services rendered in the last week in January. The per capita average based on these totals was $27.66. The present report shows slight alterations in some of the figures previously issued, mainly as a result of the inclusion of late returns.

Table I contains a summary of the statistics for the provinces, the eight leading cities, and the main industrial groups, while in Table III appear data for a comprehensive list of industries in the Dominion. The statistics are subject to revision.

Index Numbers of Earnings.—Pending the establishment of a more satisfatcory basic period for an index number of earnings, the statistics of payrolls reported at June 1 as having been paid for services rendered in the last week in May have been revised to serve as a starting point from which may be measured the current changes in the purchasing power distributed in salaries and wages by the establishments co-operating in the current surveys of employment and earnings. The employees of such firms constitute a large proportion of the total working force engaged in industries other than agriculture in the Dominion. The presentation of the payrolls data in the form of an index number gives a clearer picture of the situation than can be obtained from the use of the current aggregate or average per capita figures. The latter especially are very considerably affected by the dilution of labour which has been a marked feature of the situation in recent months.

The recent movements of employment and earnings for the eight leading industries and in manufacturing as a whole are shown for the Dominion in the following table; the index numbers of employment have been converted from their original base 1926=100 to June 1, 1941, for comparison with the index numbers of payrolls.

INDEX NUMBERS OF EMPLOYMENT AND PAYROLLS, BASED ON JUNE 1, 1941=100, TOGETHER WITH PER CAPITA WEEKLY EARNINGS

	All Industries			Manufacturing		
	Employment	Aggregate Payrolls	Per Capita Earnings	Employment	Aggregate Payrolls	Per Capita Earnings
1941			$			$
June 1	100·0	100·0	25 25	100·0	100·0	25 57
July 1	102·9	103·9	25 49	102·6	103 6	25 82

[1] Revised from $27.66.
[2] Revised from $28.38.

The increase of eight per cent in recorded employment since June 1 of last year has been accompanied by a gain of 19·4 per cent in the aggregate salaries and wages distributed by the co-operating establishments. The latest index of payrolls, at 119·4, is only slightly lower than the maximum figure of 119·5 indicated at December 1; the index of employment then, however, was 2·4 points higher than at March 1. The all-industries per capita average rose from $27.65 at February 1 to $27.92 at March 1; this increase is partly due to the fact that the losses in employment in the first quarter of the year have taken place mainly among casual or seasonal workers. The continued growth in the personnel of the heavy manufacturing industries has had an important effect in raising the average, which is also affected by overtime work. The changes recorded in the cost-of-living index in the early part of 1942 have not sufficed to alter the rate of the cost-of-living bonus as established late in 1941.

The index numbers of employment and payrolls in manufacturing have shown very impressive gains in the period for which data have been prepared. A rise of 16½ per cent in employment since June 1, 1941, has been accompanied by a gain of 30·2 per cent in the aggregate payrolls distributed. The per capita figure, at $28.58 paid on or about March 1, is the highest yet recorded, representing a gain of some $3.00 since June 1 in the weekly average. This increase, which is particularly striking in view of the continued dilution of labour, partly represents the payment of higher wage-rates over the nine months, and a more widely distributed use of the cost-of-living bonus, but is also partly accounted for by growing activity in the heavy manufacturing industries and by overtime work. The recent losses in employment in certain classes of manufactures, as in a number of non-manufacturing divisions, have taken place mainly in groups in which the average earnings are ordinarily lower than in the heavy manufacturing industries, a change in the composition of the total working force which has tended to raise the per capita average. Accordingly, it may be concluded that, to some extent, the more recently recorded increases in the per capita figures are seasonal in character.

Earnings by Industries

Manufacturing.—The 1,018,653 persons employed at March 1 by the co-operating manufacturers throughout the Dominion were paid $29,115,234 for their services in the preceding week. The same firms had employed 995,170 persons at the beginning of February, when they had distributed the sum of $28,253,709 in weekly earnings to their staffs. The increase of 2·4 per cent in the number of employees was accompanied by that of three per cent in the aggregate payrolls. The per capita weekly average accordingly also showed a considerable gain, rising from $28.39 received on or about February 1, to $28.58 at March 1. The latter is the highest per capita figure yet recorded in manufacturing as a whole.

A further important increase was indicated in the production of durable goods, in which the reported payrolls showed a proportionately larger gain, employment in this class advancing by 2·5 per cent while the weekly payrolls rose by 3·3 per cent since February 1. Where the index in the former has risen by 22·5 per cent since June 1, 1941, that of earnings has advanced by 40·1 per cent; this growth is partly due to overtime payments. In the non-durable products group, there was a gain of 2·3 per cent from February 1, while the earnings rose by 2·9 per cent. The index of employment in this class has risen by 11·7 per cent from June 1, 1941; the increase in the payrolls has amounted to 20·4 per cent.

The highest earnings in the manufacturing classes were again those reported in the production of miscellaneous non-metallic minerals, largely petroleum products; those in the iron and steel, pulp and paper, non-ferrous metal, electrical apparatus and beverage industries were also unusually high. These classes employ a large proportion of males, and require many highly skilled and experienced workers.

In general, the lowest per capita averages were reported in the tobacco, leather and textile groups, in which considerable numbers of females are employed; not only are the earnings in these categories affected by the sex distribution, but also by the age distribution of workers therein, since the female employees tend, in the main, to belong to the younger age groups. In considering the relative earnings, it must be noted that the existence or the absence of overtime work is also a factor, while the employment of any considerable number of casual workers greatly affects the per capita earnings in any industry.

Logging.—Employment in logging showed a moderate decrease, amounting to 3·3 per cent but the aggregate payrolls rose by 4·6 per cent. The per capita weekly average accordingly showed a gain, rising from $17.54 paid at February 1 for services in the last week in January, to $18.97 paid at March 1. It must again be mentioned that the figure of payrolls given in this report make no allow-

ance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

Mining.—There was a reduction of 0·2 per cent in employment in mining, in which the reported earnings decreased by 3·8 per cent. The statistics show that 82,447 persons were paid $2,872,099 at March 1; this was a per capita figure of $34.84. The average pay envelope of those employed at February 1 had contained $36.13. The decrease in aggregate earnings at March 1 took place mainly in metallic ore mining.

Communications.—In communications, there was no general change in employment, but the aggregate payrolls reported were slightly higher. Accordingly, the average earnings showed a small increase, rising from $27.55 at February 1, to $27.68 paid at March 1.

Transportation.—The transportation industries reported an aggregate working force of 122,836 men and women at March 1, when the weekly earnings distributed amounted to $4,262,692. The former figure was lower by 0·8 per cent than that at February 1, while the payrolls were lower by 0·4 per cent. The average earnings rose by 20 cents, the per capita figure being $34.70, compared with the revised average of $34.50 paid at February 1.

Construction.—Further seasonal losses, on the whole, were indicated in construction, in which the personnel declined by 12·2 per cent and the aggregate payrolls by 10·5 per cent. There were reductions in employment and earnings in building and highway construction and maintenance, while railway work was rather more active as a result of snow-clearance. The weekly payrolls reported in the last-named were rather higher, but those in building and highway work were lower. The per capita average earnings in highway employment increased, many of the workers laid-off having belonged in the lower-paid classes; the averages in building and railway maintenance work, however, were lower, with a curtailment of working hours in the former, and the employment of a considerable number of more or less casual workers in the latter. As a result of these varying movements in the different divisions of construction, the per capita earnings in the industry as a whole showed a further gain, rising from $24.82 at February 1 to $25.28 at March 1.

Services.—The service establishments furnishing returns employed slightly larger staffs, and the reported payrolls were also rather higher. The average earnings therefore showed a further gain, being $16.99 at March 1, as compared with $16.87 at February 1. These averages are lower than in any other industrial group, partly because of considerable proportions of female and part-time workers, and partly because the earnings quoted exclude the value of board and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some 61 per cent of those reported in the service industry.

Trade.—There was a seasonal decline of 3·2 per cent in the employees indicated in trade, in which the aggregate payrolls distributed were lower by 2·3 per cent. The per capita earnings were somewhat higher, rising from $23.60 at February 1 to $23.84 at March 1.

Finance.—In the financial group, 63,363 men and women were reported to have been paid $1,893,527 at March 1, a per capita weekly average of $29.88. In the last return, their employees had aggregated 62,727, whose earnings were given as $1,868,460, an average of $29.79 per person. The inclusion of the data for financial organizations raised the general per capita figure of earnings in the Dominion to $27.73 [1] at February 1, and to $27.99 at March 1. Without the statistics for the financial group, the weekly average at the former date was $27.65, and at the latter, $27.92.

Earnings by Provinces

The general curtailment of employment in the three Maritime Provinces, and in Saskatchewan and Alberta, was accompanied by losses in the aggregate weekly payrolls reported; in Prince Edward Island and Alberta the per capita averages were also lower. In Nova Scotia, New Brunswick and Saskatchewan, however, the averages were rather higher. In Ontario, there was an increase of 0·6 per cent in the number of employees, and of 0·5 per cent in the total of salaries and wages disbursed by the co-operating establishments; this discrepancy in the rates of increase resulted in a slight decline in the per capita earnings paid at March 1, which stood at $29.32, as compared with $29.36 paid at February 1. In Quebec and British Columbia, there were gains in the number of persons in recorded employment, and in the aggregate and per capita earnings.

Preliminary data on employment and earnings for a number of industries in each of the economic areas are given in Table 1. Manufacturing reported increased employment, accompanied in four of the areas by proportionately larger advances in the weekly wage payments; in the Prairie Area, however, the aggregate and average earnings in manufacturing declined at March 1. In the Maritimes, Quebec, Ontario and British

[1] Revised.

Columbia, the per capita averages were higher than at February 1. The trends in the non-manufacturing classes were mixed, no doubt responding in the main to varying seasonal influences.

Earnings by Cities

The total weekly payrolls disbursed at March 1 by the firms co-operating in Montreal, Quebec, Toronto, Hamilton, Windsor and Vancouver were higher than at February 1. In five of these centres the per capita figures were also greater, Windsor being the exception. In Ottawa and Winnipeg, however, the aggregate weekly payrolls reported were lower; in the former city, the average earnings showed a gain, but in Winnipeg the per capita figure declined.

Employment by Economic Areas

Employment in the three Maritime Provinces and in Saskatchewan and Alberta showed curtailment, most of which took place in construction. On the other hand, further gains were indicated in Quebec, Ontario, Manitoba and British Columbia. Industrial activity in all parts of the country continued at a higher level than in the late winter of any earlier year of the record.

Maritime Provinces.—The trend of employment in each of the Maritime Provinces was downward for the third consecutive month. Statements were tabulated from 929 employers whose working forces were reduced from 133,762 at February 1, to 119,195 at the beginning of March. This was a decrease of 14,567 persons, or 10·9 per cent. While the falling off was seasonal, the loss was decidedly larger than usual. The greatest curtailment was in Nova Scotia.

Employment in manufacturing was rather more active; the improvement took place mainly in pulp and paper and iron and steel works, while vegetable food and textile factories were rather quieter. Transportation afforded more employment and there was a slight gain in laundering and dry-cleaning establishments. Other non-manufacturing industries, however, showed declines, those in logging and construction being considerable.

The 885 establishments furnishing information for March 1, 1941, had reported 100,627 employees, as compared with 100,691 in the preceding month. The index number then stood at 135·1, many points below that of 159·3 at the date under review.

Quebec.—Further improvement was reported in Quebec. This took place largely in manufacturing the greatest expansion was in the chemical and iron and steel industries, while gains on a smaller scale were shown in leather, lumber, textile, non-ferrous metal and other manufacturing industries. There were, however, moderate reductions in the vegetable food and electrical apparatus divisions. Among the non-manufacturing classes, logging, shipping, construction and trade showed fairly large declines, while the trend was favourable in the communications and service groups.

The firms furnishing information at March 1 numbered 3,243, and their employees numbered 521,030, an increase of 5,425, or 1·1 per cent over their employees at the beginning of February. The index number of employment stood at 178·6, a figure which in the years since 1920 has only once been exceeded, namely, by that of 179·8 reported at December 1, 1941. The latest figure was 29·7 per cent higher than at March 1, 1941, when curtailment had been indicated. The 3,123 firms then furnishing data had employed 394,914 persons.

Ontario.—Industrial activity in Ontario continued to expand. The gain in the number of employees was not so large as that at March 1, 1941, but the percentage increase approximated the average as indicated in the last 21 years. Manufacturing showed especially marked improvement, notably in iron and steel and chemical works. Non-ferrous metal, pulp and paper, textile and miscellaneous manufactured products also afforded more employment. On the other hand, food, rubber, tobacco, clay, glass and stone and electrical apparatus plants reduced their staffs. In the non-manufacturing class, logging, construction and trade also released employees, while there were moderate gains in mining, transportation and services.

Statements were tabulated from 5,576 establishments whose employees numbered 707,858, as compared with 703,386 at February 1. The increase amounted to 0·6 per cent. This raised the index number to 174·4 at March 1, when it was slightly higher than in any other month in the record, being 19·7 per cent above that of 145·7 indicated at the same date of last year. The employers furnishing information for March 1, 1941, had employed 582,611 persons, an increase of 8,863 over their staffs in the preceding month; the gain had taken place largely in manufacturing.

Prairie Provinces.—Employment in Manitoba was rather brisker, but curtailment was indicated in Saskatchewan and Alberta. Statistics were tabulated from 1,819 firms whose staffs aggregated 170,637 at March 1, as compared with 171,507 at the beginning of February. This decline was somewhat below average, according to the experience of other years of the record. The index of employ-

ment stood at 126·1, as compared with 126·8 at February 1, 1942, and 111·3 at the beginning of March in 1941.

Manufacturing showed further gains; logging also afforded more employment, but there were contractions in transportation, trade and construction. The changes in employment generally in this area were relatively small. The 1,775 establishments co-operating at March 1, 1941, had reported a combined working force of 146,294 persons.

British Columbia.—The seasonal increase recorded in British Columbia exceeded the average gain at the beginning of March in the period since 1920. Most of the advance took place in manufacturing; within that group, the improvement in iron and steel and lumber plants was especially pronounced. Logging, transportation and construction also afforded greater employment, while mining and trade were slacker. Little general change was reported in other industries.

Statistics were tabulated from 1,356 firms employing 132,347 men and women, an increase of 2,416 or 1·9 per cent, as compared with the preceding month. The index number rose from 140·5 at February 1 to 143·1 at the beginning of March, when it was 22·5 per cent higher than the figure of 116·8 indicated at the same date in 1941; information had then been received from 1,299 employers whose staffs had aggregated 103,761.

Index numbers of employment by economic areas are given in Table 11.

Employment by Cities

Activity advanced in six of the eight cities for which separate tabulations are made, Montreal, Quebec City, Toronto, Windsor, Winnipeg and Vancouver showing improvement, while there were losses in Ottawa and Hamilton. Employment in each of these cities was at a much higher level than at March 1 of 1941, or any other year of the record.

Montreal.—The movement in Montreal was again upward. There were important gains in manufacturing, chiefly in iron and steel, the textile, leather, tobacco, beverage and miscellaneous manufactured product groups also showed considerable improvement. Construction and services were busier, among the non-manufacturing classes, but transportation and trade were quieter. Statements were tabulated from 1,869 firms employing 237,767 workers, as compared with 235,441 in the preceding month. For March 1 of last year 1,820 employers had reported 200,906 men and women on their staffs; the index then had been lower, standing at 130·0, as compared with 156·8 at the latest date, the highest on record for March 1.

Quebec.—Manufacturing in Quebec afforded decidedly more employment, mainly in the chemical and iron and steel groups. On the other hand, construction and trade were not so busy. The working forces of the 223 co-operating establishments totalled 27,852 persons, compared with 27,287 at February 1, 1942. The index was much higher than at the same date in 1941, when a smaller advance had been indicated by the 218 firms furnishing data, whose employees had numbered 20,309.

Toronto.—Activity substantially increased in manufacturing in Toronto, the largest gains were in iron and steel; printing and publishing, chemical, electrical apparatus, non-ferrous metal and miscellaneous manufactures were also busier, as were services and transportation. Construction and trade, however, reported a falling-off. Returns were received from 1,937 employers, with 221,316 men and women on their paylists at the beginning of March, as compared with 219,763 at February 1. The index, standing at 172·3, was some 33 points higher than at March 1, 1941, when a larger gain had been indicated by the 1,848 establishments making returns, whose staffs aggregated 181,452.

Ottawa.—Employment in Ottawa showed a considerable decline, mainly because construction work on several projects was nearing completion. Manufacturing, services and trade were also rather quieter. The 247 co-operating firms reported a total working force of 20,609 persons at the date under review, as compared with 22,500 at February 1. The index, at 156·4, was many points higher than that of 131·4 at the beginning of March, 1941, although much smaller losses had then been indicated by the 241 establishments whose data were tabulated, and which had employed 17,958 men and women.

Hamilton.—There was a further moderate decline in Hamilton. The greatest loss was in the electrical apparatus industry, while iron and steel plants reported continued expansion. Trade was also rather busier, but construction was not so active. An aggregate staff of 58,976 was indicated by the 343 firms furnishing statistics, as compared with 59,167 in their last report. A gain had been recorded at the beginning of March of last year, but the level of employment then was decidedly lower, the index standing at 141·7, as compared with 180·6 at the latest date. For March 1, 1941, 336 employers had made returns showing 46,266 persons on their paylists.

Windsor.—The trend was again upward in Windsor, there being a large advance in iron and steel. Trade and construction were

quieter, while other divisions showed little general change. Information was received from 201 establishments with 35,507 workers, or 1,312 more than at February 1. Employment was at the maximum for the period during which statistics have been segregated for Windsor. The 197 firms reporting for March 1, 1941, had a staff of 29,322; a rather larger gain from the preceding month had then been recorded.

Winnipeg.—Heightened activity was indicated in Winnipeg, where 559 employers reported a personnel of 53,107, as against 52,765 at the beginning of February. There was a falling-off in trade, while manufacturing operations increased moderately, mainly in the iron and steel division; construction also showed a gain. Employment was in larger volume than at March 1 of last year, when a small decrease had been reported by the 548 co-operating firms, whose forces had included 48,181 men and women. The latest index, at 127·4 was higher than in any other March for which data are available.

Vancouver.—Manufacturing recorded substantial improvement in Vancouver and transportation was rather brisker; on the other hand, trade showed a pronounced decline. On the whole, there was an increase of 340 in the staffs of the 591 establishments furnishing information, whose employees numbered 60,133. A smaller advance had been indicated at the same date of a year ago, when the 578 co-operating firms had reported 43,998 workers; the index was then 41 points lower than that of 170·5 at the latest date.

Employment by Industries

Manufacturing.—Further important expansion was reported in manufacturing, resulting in the establishment of a new all-time high level of employment. The index (1926=100) rose from 191·2 at February 1, to 195·7 at the beginning of March, when it was 29·8 per cent higher than at March 1, 1941. Statements for March 1, 1942, were furnished by 7,147 manufacturers having 1,018,653 employees, compared with 995,170 at the beginning of February. This increase of 23,483 persons, or 2·4 per cent, which greatly exceeds that indicated at the same date of last winter, was with one exception the largest ever reported at March 1 in the period since 1920. Accordingly, the index when corrected for seasonal influences, showed a further gain, rising to 199·9, from 198·4 at February 1; these two figures are the highest in the record.

The most marked increases in employment at the date under review took place in the production of durable goods, in which the index advanced from 219·9 in the preceding month, to 225·5 at March 1. Within this class, iron and steel plants showed particularly large gains, 11,000 men and women having been added to the working forces of the co-operating establishments. While most branches of iron and steel reported improvement, that in the production of vehicles (for use on land and sea and in the air), and in the fire arm division was especially pronounced. Lumbering and non-ferrous metal factories also showed greatly increased activity, but the electrical apparatus division released employes at a result of continued shortage of materials for consumers' electrical equipment. Clay, glass and stone plants were also quieter.

Among the non-durable goods industries, there were further marked increases in chemical factories, which absorbed an additional 10,500 employees. The textile, leather, pulp and paper, beverage, petroleum and miscellaneous manufacturing industries likewise reported heightened activity. On the other hand, rubber, tobacco and food factories afforded less employment. The shrinkage in many cases was seasonal.

The following are the unadjusted index numbers of employment in manufacturing at March 1 in the recent years, based on the 1926 average as 100:—1942, 195·7; 1941, 150·8; 1940, 122·6; 1939, 107·0; 1938, 110·5; 1937, 107·6 and 1936, 99·5.

A review of the data for March 1, 1941, shows that returns had then been received from 6,846 manufacturers, whose staffs had aggregated 776,708, compared with 759,117 in the preceding month.

Logging.—There was considerable contraction of a seasonal character in logging camps, in many of which the winter's operations were drawing to a close; 476 firms had 76,631 persons in their employ, or 2,641 fewer than in their last report. The decline was decidedly smaller than that recorded at March 1, 1941, and was also below the average indicated at that date in the years since 1920. The index, at 258·3, was many points above the March 1, 1941, figure of 210·0; it was also higher than in any other March in the report, except 1938.

Mining.—Statements were compiled from 425 operators with a personnel of 82,447, as against 82,632 at February 1. Coal and other non-metallic mineral mining released workers, while the extraction of metallic ores showed moderate improvement. A similar decrease, on the whole, had been registered in this group at the same date in 1941, but employment was then in rather smaller volume, the index at 168·7, being a few points below that of 176·4 at March 1, 1942.

Communications.—No general change was indicated in the communications division, in which employment was at a higher level than at the beginning of March of last year. Returns were received from 61 companies and branches having 26,761 employees at the date under review, compared with 26,763 in the preceding month. The index, at 100·2, was higher than at March 1 in any earlier year since 1931.

Transportation.—Employment in transportation showed a slightly downward movement, in conformity with the general trend at March 1 in the experience of earlier years of the record. Improvement was noted at the date under review in steam railway operation and local transportation, while shipping and stevedoring were slacker. The labour forces of the 557 co-operating branches and employers were lowered from 123,782 men and women at February 1, to 122,836 at March 1, 1942, when the index, at 97·5, was higher than at the same date of 1941, or any other year since 1930.

Construction and Maintenance.—This industry reported further seasonal curtailment, 130,335 persons being employed at March 1 by the 1,448 contractors and divisional superintendents making returns, whose February 1 employees had aggregated 148,439. Railway construction and maintenance afforded more employment, largely due to snow-clearing operations, while building and highway work released many workers. The construction index, standing at 103·7 at the latest date, was decidedly higher than at the beginning of March in 1941, when a small contra-seasonal advance had been indicated by the co-operating employers.

Services.—A moderate gain was noted in the service group, in which 613 establishments reported a combined staff of 37,673, compared with 37,217 in the preceding month. Hotels and restaurants and laundries and dry-cleaning shops were brisker. Improvement had also been recorded at March 1, 1941, but the index was then much lower.

Trade.—Employment in retail trade was substantially reduced, but there was an advance in wholesale houses. On the whole, there was a decrease of 5,185 in the personnel of the 2,196 firms furnishing data, who had 155,731 workers, compared with 160,916 at February 1. A much smaller contraction had been noted at the same date of last year, when the index stood at 145·7 as compared with 151·7 at the latest date; this is the highest March figure on record.

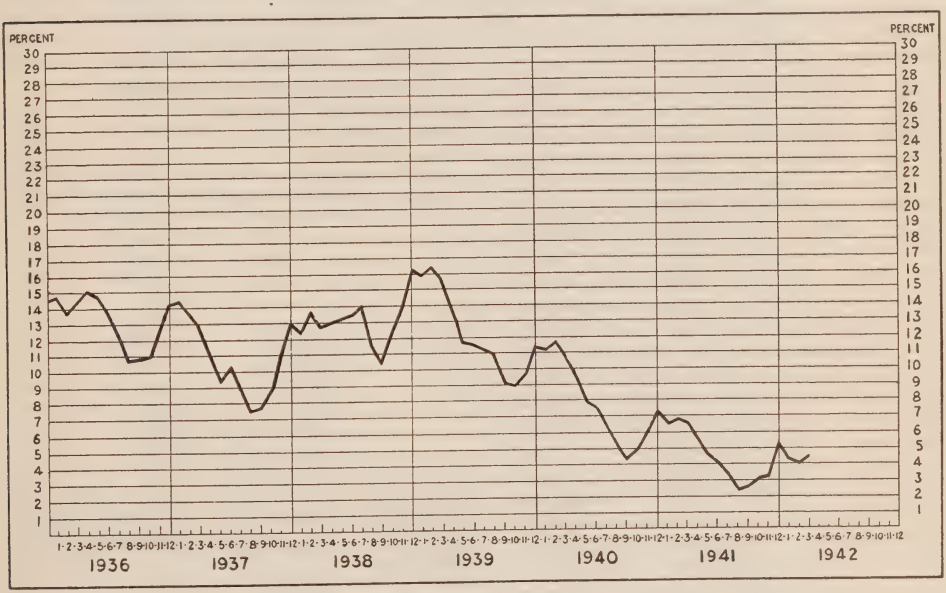
Finance.—At the beginning of March, 761 financial institutions reported staffs aggregating 63,363 persons, compared with the 62,727 in the preceding month; the index number was 122·7, slightly higher than that of 121·5 at February 1. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the March 1 survey of employment to 1,714,430 in 13,684 establishments, and lowers the index of 165·1 in the industries above enumerated, to 163·0; when the number employed by the co-operating financial institutions was added to the general figures for February 1, the index was lowered from 165·4 to 163·2. The comparable figure for March 1, 1941, was 134·2, while that in the eight industries above enumerated having been 135·3.

Index numbers of employment for the Dominion, in industries other than finance, are given in Table III.

Unemployment in Trade Unions at the Close of March, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There were 2,187 reports tabulated at end of March. These organizations had a total membership of 333,176 persons, of whom 14,955, or a percentage of 4.5 were without work, most of whom had been laid off temporarily, in comparison with percentages of 4.0 at the end of February and 6.6 at the close of March, a year ago.



The slight decline in employment shown in March from the previous month was due in part to the employment recession in the manufacturing industries. The percentage of unemployed members in these trades increased from 2.3 in February to 3.1 per cent in March; this decline was due principally to the continued placing of automobile plants on a war basis. Noteworthy seasonal reductions occurred for coal miners, also; in this group unemployment stood at 4.5 per cent as against 1.6 per cent in the previous month. This recession was traced to the usual seasonal contraction in Alberta. In addition to these decreases there were substantial seasonal declines for fishermen and a slight contraction among members in the building and construction trades, this percentage of unemployment, as will be seen in table 11, standing at 16.3 at the end of March. On the other hand

employment among members in the steam railway division reflected a very slight advance, unemployment declining from 3.3 per cent in the previous month to 3.0 per cent in March. This advance, as well as the moderate improvement shown among members in the service group, was however, not quite sufficient to offset the other employment contractions.

In table I, which accompanies this article and shows the percentages of unemployment by provinces, it will be seen that these percentages ranged from 2·1 in Nova Scotia to 7·0 in Alberta. Fractional employment increases over the previous month were observed in Manitoba, Saskatchewan and British Columbia, while on the other hand fractional recessions were indicated in Nova Scotia, New Brunswick and Quebec. Employment in Ontario showed a moderate decline to 5·7 per cent due to the continued placing of automobile plants on a war basis. In Alberta the appreciable employment recession was due to seasonal contraction in coal mining. In comparison with the situation in March, 1941, Alberta, British Columbia and Quebec unions reflected considerably higher employment levels, while in Saskatchewan, Manitoba, Nova Scotia and New Brunswick there was improvement, although to a lesser degree; fractional increases, only, were observed in Ontario.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployment in these cities, ranged from 1·2 in Halifax to 8·1 in Edmonton. In Halifax, St. John, Montreal, Winnipeg, Regina and Vancouver there were fractional increases in employment in March over the preceding month. In Toronto, the unemployment percentage of 5·9 remained identical with that of February. A moderate reduction in work was reflected in reports received from unions in Edmonton; this was the only city in this comparison to reflect a contraction. Compared with conditions at the close of March, a year ago, Vancouver members manifested a marked expansion in employment, the percentage of unemployment falling from 8·4 per cent in March, 1941, to 2·2 per cent in March, 1942. An increase of over 4 per cent in employment was observed in Edmonton, while gains of lesser degree were reflected in returns tabulated from unions in Halifax, St. John, Montreal and Regina; in Winnipeg there was a fractional employment advance, only. On the other hand in Toronto unemployment advanced from 4·7 per cent in March, a year ago, to 5·9 per cent in the month under review.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The accompanying chart illustrates the trend of unemployment from January, 1936, to date. The curve of unemployment in March, 1942, rested at a fractionally higher level than in the previous month, thus indicating a slight contraction in the volume of work afforded. The point of the curve was at a substantially lower level than at the close of March, 1941,

however, thus reflecting a noteworthy employment expansion during the period under survey.

There were 692 reports tabulated from unions in the manufacturing industries. These organizations had a total membership of 158,716 persons, of whom 4,850, or a percentage of 3·1 were unemployed, in comparison with percentages of 2·3 in February and 3·5 in March, 1941. Compared with conditions at the close of February there were moderate increases in employment among clay, glass and stone workers, and metal polishers, although the memberships were small. Fractional gains were apparent among soft drink workers and bakers and confectioners; woodworkers, leather and fur workers reported slight advances. There was very little unemployment in any of these trades, with the exception of the leather and fur workers' unions in which conditions, among fur workers especially, were rather quiet. As in February, there was no unemployment reported among cigar and tobacco workers, electric current employees, hat, cap and glove workers, butchers meat and fish packers, rubber workers, jewellery workers, mine, mill and smeltermen and gas workers. There was less than one per cent of unemployment among garment workers, whose returns indicated the same percentage out of work as that reported in February. Among papermakers, printing pressmen and textile workers employment levels remained high, although there were fractional recessions from the preceding month. Conditions among general labourers declined slightly, while among members in the iron and steel trades, the unemployment percentage, which was 2·1 in February, advanced to 3·6 in March; this was due to the further changing over of the automobile plants to a war basis. From the percentage viewpoint, tailors reported a noteworthy contraction, unemployment increasing from 1·0 per cent in February to 11·0 per cent in March, but as the membership is very small this change had but little effect on the group percentage in the manufacturing industries. In comparison with conditions at the close of March, 1941, papermakers reported a considerably higher employment level, unemployment dropping from 2·7 per cent to 0·8 per cent in the month under survey. Pronounced increases in work afforded were apparent among wood workers and textile workers. Cigar and tobacco workers, electric current employees, hat, cap and glove, rubber and gas workers were reported as being fully employed in both months under review. A marked contraction was reflected among fur workers and among members in the iron and steel trades there was a lower level of employment, due, as in the previous comparison, to the changing conditions in the automobile industry.

Reports were tabulated from 54 unions of coal miners having an aggregate membership of 21,430 persons. Of these, 954, or a percentage of 4·5 were without work in comparison with 1·6 per cent in February and 6·9 per cent in March, 1941. In comparison with the previous month there was a fractional improvement in Nova Scotia, unemployment standing at 1·4 per cent. As in February, there was no unemployment reported in New Brunswick. The employment level among British Columbia miners remained high, although a fractional recession was indicated. A substantial seasonal contraction occurred in Alberta, unemployment advancing from 2·1 in February to 12·6 in the month under review. Compared with conditions at the end of March, 1941, there was pronounced improvement in British Columbia and among Alberta members conditions, likewise, were much better. In New Brunswick, the union members were fully employed at both dates; a fractional recession only was in evidence in Nova Scotia.

There were 246 reports tabulated from unions in the building and construction trades. These organizations had a total membership

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

of 34,761 persons, of whom 5,662, or a percentage of 16·3 were without work, in comparison with percentages of 15·5 in February, 1942, and 19·9 at the end of March, a year ago. In comparison with February, unemployment among bridge and structural iron workers stood at 7·4 per cent, in March showing a marked employment advance, but as the membership is not large, there were a small number, only, involved. Due to continued seasonal conditions the percentage of unemployment among bricklayers stood at 33·5 per cent; this was a slight improvement over February. Among electrical workers there was very little unemployment, although there was a fractional recession in employment. Among painters, decorators and paperhangers and plumbers and steamfitters, unemployment stood at around 8 to 10 per cent; in these groups fractional declines were apparent. Moderately lower levels were observed among steam shovel and dredgemen and granite and stonecutters. In these trades, however, the unemployment percentages were high, especially for granite and stonecutters; the percentage out of work in this group was 42·3. A tendency toward reduced activity was observed among carpenters and joiners; the percentage of unemployment advanced from 16·9 in February to 18·6 at end of March. Lathers and roofers likewise, reported a contraction of over 7 per cent, but as the membership is small very few members were affected. In comparison with the situation in March, 1941, carpenters and joiners indicated marked expansion, unemployment showing a reduction of 8·0 per cent. Among the smaller memberships bridge and structural iron workers, likewise, reflected a noteworthy employment advance. Fractional increases were apparent among steam shovel and dredgemen and plumbers and steamfitters, while among bricklayers, masons and plasterers there was a considerable recession, the employment contraction being about 6 per cent.

Returns were received from 872 organizations in the transportation industries. The total membership reported was 75,959 persons, of whom 2,025, or a percentage of 2·7 were unemployed, in comparison with 2·9 in February and 5·2 in March, a year ago. Among steam railway men, whose membership includes approximately 80 per cent of the entire group membership, there was a fractional employment advance to 3·0 per cent. Street and electric railway employees reflected a fractional decline; there was very little unemployment in this group. Teamsters and chauffeurs reported a slight contraction, as did, also, navigation workers. In comparison with the situation in March, 1941, conditions among steam railway employees were much better. The situation likewise showed a noteworthy improvement for navigation workers. A slight recession was in evidence among teamsters and chauffeurs. Among street and electric railway employees there was a fractional contraction.

Returns were tabulated from 9 unions of retail clerks whose total membership was 3,094 persons. These were fully employed, as in the previous month and in March, a year ago.

Reports were received from 97 unions of civic employees whose combined membership was 9,969 persons. Of these, 36, or a percentage of 0·4 were without work in comparison with 2·0 per cent in February and 1·5 per cent at the close of March, 1941.

There were 152 reports tabulated from unions in the miscellaneous group of workers. The total membership was 11,792 persons, of whom 137, or a percentage of 1·2 were unemployed in comparison with 1·5 per cent in February and 3·8 per cent in March, 1941. Compared with February, theatre and stage employees indicated that 4·1 per cent of the membership were without work; this showed a moderate employment increase. Very little unemployment was shown in the remaining occupations; among these were hotel and restaurant employees, barbers, stationary engineers and firemen and unclassified workers; these groups registered fractional employment advances, only. In comparison with the situation in March, 1941, theatre and stage employees and stationary engineers and firemen indicated employment increases of about 4 per cent each; these were the more noteworthy gains. Moderate improvement was reflected in reports received from hotel and restaurant employees, the percentage out of work standing at 0·9 in March; barbers and unclassified workers reflected fractional advances, only.

Returns were tabulated from 4 unions of fishermen. The total membership was 1,624, of whom 350, or a percentage of 21·6 were unemployed compared with 8·4 per cent in February and 35·1 per cent in March, 1941.

Reports were received from 4 unions of lumber workers and loggers. The combined membership was 3,098, of whom 229, or a percentage of 7·4 were unemployed, compared with 5·6 per cent in February and 2·2 in March, a year ago.

Table I shows by provinces the average percentage of union members unemployed each year from 1931 to 1941, inclusive, and also, the percentage of unemployment for March of each year from 1931 to 1940, inclusive, and for each month from March, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Building Permits Issued in Canada During March, 1942

The March report of building permits compiled by the Dominion Bureau of Statistics includes returns from 177 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 143 reported detailed operations. The remaining 34 advised that no permits had been issued during the month of March while 27 municipalities had failed to report at the close of April 12.

The total value of permits reported as issued in the month of March is $6,831,997. Revised values for the month of February include returns from 202 municipalities and aggregate $4,407,965. Reports were received from 58 of the 58 original municipalities and show a value of $5,707,622 for March. The corresponding revised value for February includes 58 returns and is $3,743,555, while the March, 1941, value was $6,418,108.

The total value of permits issued by all municipalities during the three elapsed months of the current year is $17,672,649. The value of the 58 municipalities for the same period is $13,697,423, while their corresponding value in 1941 was $14,669,440.

During the month of March new construction of all types amounted to 74·3 per cent of the total value, while the percentage of new residential construction was 46·6.

ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1941

COMPARED with 1940 there was an increase of $22,296,311 or 19·7 per cent in the total value of building permits issued during 1941, according to the *Annual Report of Building Permits Issued in Canada, 1941*, published by the Dominion Bureau of Statistics.

Building permits issued by the 204 municipalities making monthly returns to the Dominion Bureau of Statistics were valued at $135,301,519 in 1941. Of this amount $106,734,427 was for new construction and $28,567,092 for additions, alterations and repairs. Residential construction totalled $70,055,581, commercial $26,023,212, industrial $25,991,844, institutional $12,102,814 and other construction work $1,128,068. Compared with 1940, residential permits gained $12,499,072, industrial permits $5,783,346, commercial $4,790,358 and institutional $3,818,404. Other construction permits declined by $4,594,869.

Prior to 1940 monthly returns were received from only 58 municipalities. The series was enlarged to 204 in 1940. Building permits issued by these 58 cities in 1941 were valued at $101,047,815, an increase of $20,773,465 or 25·8 per cent as compared with the previous year.

The following table shows that the greatest percentage increase in the value of building permits was reported by New Brunswick followed by Nova Scotia, while the only decline, a substantial one, was that reported from Prince Edward Island.

COMPARISON, BY PROVINCES, OF VALUE OF BUILDING PERMITS ISSUED IN 1940 AND 1941

Province	1941	1940	Percentage Variation + Increase − Decrease
	$	$	
Prince Edward Island	77,775	123,785	− 25·9
Nova Scotia	4,859,761	3,861,423	+ 48·0
New Brunswick	4,215,545	1,699,697	+ 117·8
Quebec	32,901,333	27,935,864	+ 17·8
Ontario	63,154,650	53,592,620	+ 9·9
Manitoba	5,598,645	5,096,011	+ 10·7
Saskatchewan	3,154,599	2,849,150	+ 15·4
Alberta	6,830,128	5,917,743	+ 21·6
British Columbia	14,509,083	11,928,915	+
Canada	**135,301,519**	**113,005,208**	**+ 19·7**

REPORT OF EMPLOYMENT AND CLAIMS OFFICES FOR THE PERIOD JANUARY TO MARCH, 1942

BUSINESS transacted by Employment and Claims Offices during the quarter January to March, 1942, showed a decline from that conducted by offices of the Employment Service of Canada in the corresponding quarter of 1941, there being a decrease of twenty per cent in vacancies offered and of thirty-one per cent in placements effected. Services, construction, logging and agriculture showed losses in both cases, by far the largest taking place in services and in construction. A fairly substantial gain also was recorded in manufacturing and much smaller increases in trade, transportation, mining and finance. Provincially, all except Nova Scotia and Manitoba registered declines, that in the Province of Quebec being particularly heavy.

From the chart on page 595 which accompanies the article on the work of the Employment and Claims Offices for the month of March, it will be seen that the curve of vacancies in relation to applications was downward during January, but followed an upward trend during February and March, the change during the latter month being very slight, while the curve of placements, though following a similar course during January and February, declined almost three points during March. At the end of the quarter the level of vacancies was considerably higher and that of placements somewhat lower than those recorded at the end of the corresponding period a year ago. During the quarter January to March, 1942, there was a ratio of 58·7 vacancies and 46·6 placements for employment as compared with 49·7 vacancies and 45·8 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,166, of applications registered 1,987, and of placements effected, 925, in contrast with a daily average of 1,457 vacancies, 2,931 applications and 1,343 placements in regular and casual employment during the first quarter of 1941.

During the three months, January to March, 1942, the Officers reported that they had referred 76,620 persons to positions and effected a total of 70,273 placements, of which 46,806 were in regular employment and 23,467 in

casual work. Of the placements in regular employment, 35,737 were of men, and 11,069 of women, while casual work was found for 9,100 men and 14,367 women. A comparison with the same period of 1941 showed that 102,000 placements were then made, of which 64,449 were in regular employment and 37,551 in casual work. Applications for employment during the period under review were received from 106,241 men and 44,701 women—a total of 150,942—in contrast with a registration of 222,726 during the same period of 1941. Employers notified the Commission during the first quarter of 1942 of 88,569 positions, of which 54,923 were for men and 33,646 for women, as compared with 110,724 opportunities for work offered during the corresponding quarter of 1941.

In another section of this issue will be found a report in detail of the transactions of the Employment and Claims Offices for the month of March, 1942.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

JANUARY-FEBRUARY RECORD

THE British *Ministry of Labour Gazette*, March, 1942, summarizes the January-February employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at February 16 was 99,928, showing a decrease of 287 as compared with January 12. Of this total, 26,508 had been classified as unsuitable for ordinary industrial employment. Those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 10,664, an increase of 3,376 as compared with January 12. Those registered as

unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 8,663, showing a decrease of 288 as compared with January 12.

The increase in the number of men and boys temporarily suspended from work was mainly due to severe weather conditions which restricted outdoor employment on the day when the count of the numbers unemployed was taken.

The corresponding figures for women and girls on the registers at February 16 were 62,247 wholly unemployed, 6,603 temporarily stopped, and 312 unemployed casual workers. Of those wholly unemployed 2,065 had been classified by interviewing panels as unsuitable for normal full-time employment, and 1,997 had been classified as unable for good cause to transfer to another area. As compared with January 12, the numbers wholly unemployed showed a decrease of 8,400, those temporarily stopped a decrease of 845, and unemployed casual workers an increase of 13.

The number of applicants for unemployment benefits or allowances on the registers at February 16 was 140,433, as compared with 137,611 at January 12, and 470,002 at February 10, 1941.

United States

Total civil nonagricultural employment in the United States increased by 303,000 from mid-February to mid-March. The March total amounting to 40,298,000 and representing an increase of 2,537,000 since March, 1941.

The largest gain among the major industrial groups from February to March occurred in contract construction, the increase of 102,000 workers being traceable largely to Federal activities. The employment gain of 74,000 in manufacturing industries was less than the usual February-March increase, conversion of plant facilities to war production and restrictions on the use of critical materials offsetting to some extent the substantial gains in the war industries.

Smaller gains were reported in transportation and public utilities (24,000), trade (21,000), and finance and service (14,000). Employment in the Federal, State, and local government services increased by 69,000, a substantial portion of this gain being registered in government navy yards and arsenals. Employment in the mining group showed a decrease of 1,000 over the month due largely to reduced employment in crude petroleum producing and less-than-seasonal declines in coal mining.

The major factor in the expansion of nonagricultural employment over the year interval was the increase of 1,327,000 factory workers. Federal, State, and local governments showed an increase of 654,000, approximately one-fourth of which was in navy yards and arsenals. Transportation and public utilities increased 218,000, trade rose 129,000, and contract construction employment increased 116,000. The only group showing a decrease over the year was mining (5,000), the March, 1942, levels of employment in anthracite mining and petroleum producing being slightly below the levels of March a year ago.

The rise in factory employment from February to March was about half that which usually occurs under normal peacetime conditions. The durable-goods industries showed an increase of 75,400 wage earners while nondurable goods reported a decrease of 2,200 wage earners. One of the chief factors retarding the rise in factory employment was a further recession in employment in the automobile industry, the March decrease of 9,700 representing the fourth consecutive monthly decline. Employment in automobile plants in March was 181,700 below that of March, 1941, and 194,900 below the 1941 peak reached in June.

Sharp employment increases were again shown in such strategic war industries as shipbuilding; aircraft; foundries and machine shops; electrical machinery; machine tools; machine-tool accessories; blast furnaces, steel works and rolling mills; engines; turbines, etc.; firearms, explosives, and ammunition. Among the nondurable-goods industries, slaughtering and meat packing, and book and job printing and publishing showed decreases of slightly more than the usual seasonal amount. Canning showed a substantial greater-than-seasonal decrease, a number of canning companies reporting reductions because of restrictions on tin. Contraseasonal decreases were reported by the furniture, hosiery, and carpet and rug industries, due to restrictions on the use of raw materials.

The increase in factory employment from February to March carried the index for all manufacturing to 134·5 per cent of the 1923-25 average representing a rise of 12·2 per cent over the year. Factory pay rolls advanced 2·1 per cent over the month to 181·9 per cent of the 1923-25 average, and the increase over the year amounted to 38·6 per cent. The increase in working hours in many war industries to well above 48 hours per week, as well as the expansion of hours in other industries, overtime payments and wage-rate increases account for the greater proportionate gains in pay rolls than in employment over the past year.

Employment and pay rolls in retail trade showed less than the usual March increase. Substantial gains were reported by apparel and general merchandising stores. The effect of government restrictions was reflected in

the contraseasonal curtailment of 7·1 per cent in the number of employees of automobile dealers and tire and battery shops. Retail-lumber and building-material dealers also reported a contraseasonal loss (1·5 per cent), and dealers in household furniture, refrigerators, radios and other household electrical appliances reported 1·7 per cent fewer employees. Employment in wholesale trade declined by the usual seasonal amount (0·3 per cent) but pay rolls rose slightly. In the various public utilities employment changes were not significant with the exception of street railways and buses, in which the demand for additional transportation facilities resulted in a rise of approximately 1 per cent in employment instead of the usual small March decrease.

During March, civilian employment in the executive branch of the Federal Government reached a total of 1,889,000 persons requiring $287,477,000 pay rolls. This constituted an increase over February of 83,600 employees and $25,370,000 pay rolls, and, over the corresponding month a year ago, of 687,000 employees and $103,233,000 pay rolls.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (Labour Gazette, August, 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts". It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941, with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the Labour Gazette for October.)

The four major changes made by the new Order are: (1) the application of the minimum rates to *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders and not only as previously to those employees actually engaged on Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation, (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent viola-

tions to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During April

During the month of April the National War Labour Board prepared, on request, 132 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various Government departments (other than the Department of Munitions and Supply) appear in the accompanying table:—

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Public Works..	Additional storey, cloak room wing, Rideau Hall.	Ottawa, Ont....	R. Taylor and Son, Ottawa, Ont.	Dec. 17, 1941	13,300 00	"A1" Wage Schedule.
Public Works..	Repairs to Dredge *Pownal No. 2.*	Point Tupper, N.S.	Port Hawkesbury Marine Railway Company, Ltd., Port Hawkesbury, N.S.	Mar. 19, 1942	7,640 00	"A2"—General Clause.
Public Works..	Repairs to Dredge *P.W.D. No. 5.*	Sydney, N.S...	The Sydney Foundry and Machine Works, Ltd., Sydney, N.S.	April 1, 1942	9,860 00	"A2"—General Clause.
Transport.....	Additional development of Aerodrome.	Holsom, Alta...	F. R. Gibbs, Medicine Hat, Alta.	April 9, 1942	40,539 75 (estimated)	"A1"—Wage Schedule.
Transport.....	Additional development of Aerodrome.	Vanscoy, Sask..	Evans Gravel Surfacing Company, Ltd., Saskatoon, Sask.	April 9, 1942	30,470 50 (estimated)	"A1"—Wage Schedule.
Transport.....	Development of Aerodrome.	Chandler, Sask.	Gibbs Brothers, Lumsden, Sask.	April 18, 1942	34,915 00 (estimated)	"A1"—Wage Schedule.

GROUP "A" CONTRACTS

(1) Works of Construction, Remodelling, Repair or Demolition

NOTE: For the contracts in the following table marked "A1", a schedule of wage rates and other labour conditions was provided. For those contracts marked "A2" no wage schedule was provided but a General Clause was furnished calling for the payment of fair wages and the observance of the usual working hours.

GROUP "B" CONTRACTS

Manufacture and Supply of Equipment, Supplies, Interior Fittings, Etc.

NOTE.—Each of the contracts noted under this heading contains the "B" Labour Conditions referred to in the introduction to this article.

ROYAL CANADIAN MOUNTED POLICE

Nature of Contract	Contractor
Bedsteads	Simmons, Limited, Montreal, P.Q.
Poplin Ties	Tooke Bros., Ltd., Montreal, P.Q.
Broadcloth	Dominion Textile Company, Ltd., Montreal, P.Q.
Cloth, Brown Serge	Paton Mfg., Company, Ltd., Montreal, P.Q.

POST OFFICE DEPARTMENT

Nature of Contract	Contractor
Metal dating stamps and type cancellers, etc.	Pritchard-Andrews Company of Ottawa, Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.	Pritchard-Andrews Company of Ottawa, Ltd., Ottawa, Ont.
Letter Carriers' Uniforms	Barringham Rubber Co. Ltd., Oakville, Ont.
	Uniform Company Reg'd, Quebec, P.Q.
	P. A. Alain, Ltd., Quebec, P.Q.
	Paton Manufacturing Company, Ltd., Montreal, P.Q.
	Uniform Cap Manufacturing Company, Ottawa.
	Jay Wolfe, Inc., Montreal, P.Q.
	J. E. Wiegand & Company, Ltd., Kitchener, Ont.
	Kaufman Rubber Company, Ltd., Kitchener, Ont.
Mail Bag Fittings	United-Carr Fastener Company of Canada, Hamilton, Ont.
	Bell Thread Company, Ltd., Hamilton, Ont.
	Pritchard-Andrews Company, Ltd., Ottawa.

Mail Bagging	J. Spencer Turner Company, Ltd., Hamilton, Ont.
Stamping Machine Parts	Machine Works, Ltd., Montreal, P.Q.
Parcel Scales, etc.	Pritchard-Andrews Company, Ltd., Ottawa.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec and the Industrial Standards Act are summarized in separate articles following this.

Manufacturing: Metal Products

SAINT JOHN, N.B.—MCAVITY & SONS LTD. AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 835.

Agreement reached through settlement of a dispute by an I.D.I. Commissioner, as noted on page 515 of this issue. Agreement to be in effect from February 16, 1942, to March 31, 1943, and thereafter subject to 30 days' notice; the wage rates to continue until the cessation or suspension of hostilities, subject to the provisions of Order in Council P.C. 8253.

The company recognizes the shop committee of the union as the bargaining agency. No discrimination against union or non-union employees.

Hours: 8 per day, 5 on Saturdays, a 45 hour week; for night work, 9 per night, 5 nights per week, also a 45 hour week. Overtime: time and one half until midnight; thereafter, double time; double time for work on Sundays and eight specified holidays. For maintenance men, however, time and one half only after 60 hours' work in any one week.

Hourly wage rates: beginners 37 cents, learners 40 cents, machine labourers 42 cents; production workers—class C 46 cents, class B 53 cents, class A 60 cents, machine operators 68 cents, journeymen 75 cents, tool makers 80 cents, apprentices 22 to 40 cents, labourers 38 cents, shop boys and male employees under 18 years 20 cents. For night work, employees to receive 5 per cent extra.

Provision is made for the settlement of any disputes by negotiation, or, if necessary, by arbitration.

Beauharnois, Quebec.—St. Lawrence Alloys and Metals Ltd. and its Employees, Members or not of the Alloys and Metals Workers Union No. 22613 (A.F. of L.).

Agreement reached following application for a Board under the Industrial Disputes Investigation Act, mediation by an officer of the Department of Labour and subsequent withdrawal of the application, as noted on page 515 of this issue. Agreement in effect from April 18, 1942 to April 17, 1943, and for another year, if no notice given. No discrimination against union or non-union employees.

Hours: 8 per day, 48 per week. Overtime: time and one half for work over 48 hours in a week and for work on six specified holidays. One week's vacation with pay for employees with 16 months' service at May 1 of any year.

The cost-of-living bonus provided by law will be paid. Provision is made for seniority rights and for the settlement of disputes.

Vancouver, B.C.—Pacific Bolt Manufacturing Co. Ltd. and Vancouver Metal Workers' Union, Canadian Congress of Labour.

Agreement reached through mediation of officers of the Department of Labour subsequent to a report of a board under the Industrial Disputes Investigation Act and a later strike, as noted on page 515 of this issue. Agreement to be in effect from April 15, 1942, for the duration of the war and three months after.

The Company recognizes the union as the sole bargaining agency of the employees, with open shop conditions. Hours: 44 per week for day shift; second shift, 8 hours, with 20 minute lunch period, for which 8 hours to be paid for; if required, employees on second shift to work 3¾ hours on Saturday and be paid for 4 hours; for third shift, 7½ hours, with 20 minute lunch period for which 8½ hours' pay allowed; employees on this shift to work 3½ hours on Saturday, if required, and be paid for 4 hours. Overtime to be paid at time and one half for first four hours and double time thereafter; double time for work on Sundays and eight specified holidays.

Hourly wage rates for male employees: spike machine forgers $1, skilled forgers 90 cents, nut forging machine operators 85 cents, forging machine operators 80 cents, machinists 90 cents, sheerman 65 cents, bolt threaders 62½ cents, roll threaders 65 cents, millwright 75 cents, spike machine forgers' helpers 65 and 70 cents, forgers' helpers 50 cents, tapping and burring machine operators 60 cents, bolt trimmers 55 cents, pointers 40 cents, general labourers 45 and 50 cents, assistant shipper 60 cents, nutters 40 cents. In addition to the above basic rates, the parties will conform to regulations of the Dominion Government *re* cost-of-living. Provision is made for recognition of seniority and for settlement of disputes.

Transportation and Public Utilities: Water Transportation

Vancouver, B.C.—The Corporation of the City of North Vancouver and Unlicensed Engine Room and Deck Crews of the North Vancouver Ferries, Members of the Inland Boatmen's Union.

Agreement reached following application for a Board under the Industrial Disputes Investigation Act, mediation by an officer of the Department of Labour, as noted on page 515 of this issue. Agreement to be in effect from April 10, 1942; the leave and working conditions may be re-opened at any time on 60 days' notice from either party; the basic wage scale and cost-of-living bonus provisions are in effect for the duration of the war and six months after.

The employer agrees to recognize the union as the sole collective bargaining agency as long as the union represents a majority of employees covered by the agreement. Hours: 8 per day, with one day off in seven. Overtime: 75 cents per hour. Monthly wages for unlicensed crews of the deck and engine room departments: deck crew $115, engine room crew $117.50. (This wage increase of $5 per month is retroactive to January 1, 1942). Two weeks' vacation with pay; 12 days' sick leave per year is granted. A cost-of-living bonus of $15 per month is granted from January 1, 1942, to be adjusted quarterly with changes in the cost-of-living on the basis of $5 per month for each 5 point change in the cost-of-living.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act", the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934", continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in

the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Procedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the amendment of twelve agreements, the correction of one and the repeal of one, all of which are noted below. In addition, a request for the extension of a new agreement in the paint manufacturing industry was published in the *Quebec Official Gazette*, April 25, and requests for the amendment of the following agreements were also published in the *Quebec Official Gazette:* barbers at Montreal, building trades at Sorel, retail stores at Magog, building trades at Joliette, building trades at Quebec, building trades in the Chicoutimi and Lake St. John district, in the issue of April 11; bakers at Three Rivers, in the issue of April 18; building trades at Quebec, furniture industry throughout the province, barbers at Rouyn and Noranda, policemen, firefighters and inside municipal employees of the city of Quebec, in the issue of April 25. In addition, Orders in Council were published in the *Quebec Official Gazette* during April approving or amending the constitution and by-laws of certain joint committees and others approving the levying of assessments by certain parity committees.

Manufacturing: Vegetable Foods

BAKERS, GRANBY

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council for this trade (LABOUR GAZETTE, October, 1938, page 1170, October, 1940, page 1075 and November, 1941, page 1424) by providing for a cost-of-living bonus in accordance with Orders in Council P.C. 8253 and 9514 of the federal government, 1941.

BAKERS, HULL

An Order in Council, dated April 1, and published in the *Quebec Official Gazette* April 11, repeals the Order in Council making this agreement obligatory and later amendments (LABOUR GAZETTE, June, 1935, page 531, October, 1935, page 954 and October, 1938, page 1171). This agreement was repealed on the request of the parity committee, which notified the department that it no longer held the required authority to see to the proper administration of the decree since the contracting parties do not actually constitute the preponderant group in the baking industry.

Manufacturing: Fur and Leather Products

FUR MANUFACTURING INDUSTRY, CITY OF QUEBEC

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Orders in Council for this industry (LABOUR GAZETTE, November, 1940, page 1201, September, 1938, page 1042, and October, 1939, page 1065, and December, 1941, page 1572) by providing for a cost-of-living bonus in accordance with 1941 Orders in Council P.C. 8253 and P.C. 9514 of the federal government. A correction to the original Order in Council also was published in the *Quebec Official Gazette* of April 4, but does not affect the summaries given in the LABOUR GAZETTE.

FUR MANUFACTURING INDUSTRY (WHOLESALE), MONTREAL

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council (LABOUR GAZETTE, September, 1940, page 970) by adding another employer to the parties to the agreement.

Manufacturing: Textiles and Clothing

EMBROIDERY INDUSTRY, MONTREAL

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council (LABOUR GAZETTE, March, 1941, page 333) by providing for a cost-of-living bonus in accordance with federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Manufacturing: Printing and Publishing

Lithographing Industry, Province of Quebec

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council (Labour Gazette, December, 1940, page 1310) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Printing Trades, Montreal

An Order in Council, dated March 29, and published in the *Quebec Official Gazette*, April 4, extends the term of this agreement (Labour Gazette, June, 1941, page 704, April, 1938, page 452, June, 1936, page 546, December, 1936, page 1181, October, 1939, page 1065, February, 1941, page 183 April, 1941, page 473, December, 1941, page 1572) to June 30, 1942. (An Order in Council extending the term of this agreement from January 1, 1942 to March 31, 1942, was published in the *Quebec Official Gazette* of December 27, 1941.)

Construction: Buildings and Structure

Plumbers and Sheet Metal Workers, Three Rivers

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council for these trades (Labour Gazette, March, 1940, page 283, and August, 1941, page 1011) by providing for a cost-of-living bonus of 7 cents per hour for senior journeymen in zone I, and one of 5 cents per hour for senior journeymen in zone II and of junior journeymen of zone I. This bonus is to remain unchanged until February 15, 1943.

Trade

Retail Stores, Quebec

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Orders in Council for this industry (Labour Gazette, October, 1940, page 1076; January, 1939, page 96, March, page 336, July, page 729, October, page 1067; January, 1940, page 69, April, page 391, August, page 867; February, 1941, page 184, August, page 1013 and November, page 1425) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Garages and Service Station Employees, Quebec

See below under "Service: Custom and Repair."

Service: Custom and Repair

Garages and Service Station Employees, Quebec

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Orders in Council for these industries (Labour Gazette, June, 1938, page 676, December, page 1174, February, 1939, page 218, April, page 435, May, page 529, June, page 630; July, 1940, page 734, October, page 1076 and December, page 1312) by providing for a cost-of-living bonus in accordance with the federal government 1941 Order in Council P.C. 8253 and amendments.

Service: Business and Personal

Tavern Employees, Quebec

An Order in Council, dated April 1, and published in the *Quebec Official Gazette*, April 11, amends the previous Orders in Council (Labour Gazette, June, 1938, page 698, July, page 800, and January, 1940, page 69) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Barbers and Hairdressers, Quebec

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council for these trades (Labour Gazette, August, 1941, page 1013) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Barbers, St. John and Iberville

An Order in Council, dated April 15, and published in the *Quebec Official Gazette*, April 18, amends the previous Order in Council for this trade (Labour Gazette, December, 1941, page 1573) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in New Brunswick and Saskatchewan

In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers or employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in

carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and of amendments to them are given in the LABOUR GAZETTE, October, 1940, page 1077. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

New Brunswick

Construction: Buildings and Structures

CARPENTERS, MONCTON

A schedule of wages and hours for carpenters and joiners in the city of Moncton and within 5 miles of it, was published in *The Royal Gazette*, April 15, and is to be in effect from March 1, 1942, to December 31, 1942.

Hours: 8 per day, a 48 hour week. Overtime: time and one half for first hour and double time thereafter; double time also for all work on Sundays and holidays. Minimum wage rates: carpenters and joiners with less than one year's experience 45 cents, with one year's experience 50 cents, with two years' experience 60 cents, with more than three years' experience 65 cents. (In the previous schedule the minimum rate was 50 cents.)

Saskatchewan

Service: Business and Personal

BARBERS, MOOSE JAW

An Order in Council, approved April 7, and published in *The Saskatchewan Gazette*, April 15, amends the previous Order in Council for this trade (LABOUR GAZETTE, January, 1940, page 71) by making a slight change in the arrangement of hours.

INDEX NUMBERS OF RATES OF WAGES IN CANADA 1901-1941

THE report on Wages and Hours of Labour in Canada, 1929, 1940 and 1941, No. 25 in the series, published each year since 1921, not being available yet as a supplement to the LABOUR GAZETTE, the table of index numbers of rates of wages for various classes of labour is given herewith in advance of publication later. Most of the reports in this series were issued as supplements to the Gazette for January, but No. 22, that for 1929, 1937 and 1938, and No. 23 for 1929, 1938 and 1939, were issued as supplements to the LABOUR GAZETTE for March, 1939, March, 1940 and No. 24 for 1929, 1939 and 1940 was a supplement to the LABOUR GAZETTE for April, 1941.

This table of index numbers was first published in Report No. 1, issued as a supplement to the LABOUR GAZETTE for March, 1921, and covered the period 1901 to 1920. The index number for each group in each year since 1921 has been calculated by ascertaining the percentage change in each wage rate for the current year from the rate shown for the preceding year and averaging such percentage changes. The group index for the preceding year is then adjusted according to the average change so ascertained. Until 1935 only the figures for the first six groups were averaged but in Report No. 19 for the years 1929, 1934 and 1935 all the group figures were averaged, being weighted according to the approximate number of employees in each group of trades or industry as shown by the Census of 1921 and of 1931. The weights are as follows (in thousands): building trades 143; metal trades 131; printing trades 25; electric railways 18; steam railways 161; coal mining 28; common factory labour 110; miscellaneous factory trades 363; logging and sawmilling 77.

The figures were secured in June for the building trades, logging and sawmilling, pulp and paper mills, iron and steel products including automobiles, parts and accessories. For the other trades and industries the information was secured chiefly in September. Changes in wages after that month are not reflected in the index numbers, except in building trades and a few other cases. Each employer and union, however, was requested to report any cost of living bonus and all reported were added to the wage rates and included in the calculation of the index number. For steam railways, coal mining and metal mining the bonus after November 15 was included.

Index Number on Basis of Wages 1935-1939 as 100

The index number outlined above was on the basis of wages in 1913 as 100 to correspond with the index number of changes in the cost-of-living, published by the Department in the LABOUR GAZETTE, and which was also on the basis of prices in 1913 as 100. A new official cost-of-living index number for Canada was constructed by the Dominion Bureau of Statistics on the basis of prices in 1935-1939 as 100. This was published in the LABOUR GAZETTE for October, 1940, and in subsequent issues. It was therefore, desirable

to have a wage index number on the same base. The figures in the old index number have therefore been converted to the base 1935-1939.

For each group the figures in the earlier index were averaged from 1935 to 1939, and the resulting average divided into the figures for each year from 1901 to 1940, multiplied by 100. The average for all groups in each year was made by averaging the group figures weighted according to the approximate number of workers in each, as had been done for the earlier index since 1935 as described above.

Index figures for four new groups have been calculated and were included in the new index. The weights for these were as follows: metal mining 30, steamships 16, laundries 19 and telephone employees 18. The weight for metal mining was derived from the number of employees in 1921, 1931 and 1938, whereas

* Weighted according to average number of workers in each group in 1921 and 1931 except metal mining where years 1921, 1931 and 1938 were used

† Including some increases effected near the end of the year

‡ Including a 10 per cent decrease for certain classes toward the end of the year

(*a*) Seven trades from 1901 to 1920, eight from 1921 to 1926, nine from 1927 to 1941; 13 cities to 1927, 14 cities to 1930, thereafter 31 to 42 cities

(*b*) Five trades from 1901 to 1926, four from 1927 to 1941.

(*c*) Two trades from 1901 to 1920, four for 1921 and 1922, two for 1923 and 1924, six from 1925 to 1941.

(*d*) Two classes from 1901 to 1923, five classes 1924 to 1941; from 1901 to 1930, 13 cities; thereafter 35 decreasing to 25.

(*e*) Twenty-three classes.

(*f*) Four classes 1901 to 1920, twelve classes 1921 to 1941.

(*g*) The number of samples (and industries) increased from time to time since 1920; machine operators, helpers, etc., also included.

(*h*) Revised, see text.

§ Preliminary.

for the other industries the weights were derived from the number employed in 1921 and 1931 as shown by the census. In metal mining there has been a much greater increase in numbers employed than in other industries.

The new table of index numbers is given herewith for the years 1901 to 1941. The index for the Logging and Sawmilling group has been recalculated, rates of wages for many additional employers being included in the calculation which was carried back to 1901 instead of only to 1911. The general index is therefore revised to include the changes in this group.

During 1941, all groups were higher than in 1940 and the general index number advanced approximately ten per cent. The increases were greatest in steam railways, coal mining, common factory labour, miscellaneous factory trades, logging and sawmilling, and steamships, these being up ten per cent or more.

The index numbers on the 1913 base for 1941 in continuation of the table previously published were as follows: building trades 184·6, metal trades 215·8, printing trades 203·6, electric railways 215·8, steam railways 229·1, coal mining 195·6, common factory labour 232·6, miscellaneous factory trades 243·1, logging and sawmilling 221·2. The unweighted average for the first six groups was 207·6 and the weighted average was 209·5. The general average (weighted) for all groups was 224·3. The figure for the miscellaneous factory trades groups is preliminary, the compilation being incomplete and therefore the general average is also preliminary.

PRICES, RETAIL AND WHOLESALE IN CANADA, APRIL, 1942

Cost-of-Living, Prices of Staple Articles and Index Numbers

THE Dominion Bureau of Statistics index number of the cost-of-living in Canada on the base period 1935 to 1939 as 100 was 115·9 at the beginning of April the same as at the beginning of March as compared with 108·6 for April, 1941, 104·6 for April, 1940, and 100·8 for August, 1939, the last prewar month. All group indexes with the exception of home furnishings and services were unchanged between March 2 and April 1. In the food group increases in the cost of butter, beef, tea, bananas, and oranges were offset by declines in eggs, veal and potatoes. The increase in the cost-of-living since August, 1939 was 15 per cent down to April 1, as compared with 27·2 per cent between July, 1914, and March, 1917, the comparable period during the last war.

After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 8253, the index was 115·0 at April 1, as compared with 114·5 at January 2, and 114·6 at October 1, 1941, thus showing an advance of five-tenths of one point between the beginning of January and the beginning of April, 1942, and a wartime increase in the cost-of-living of 15 points.

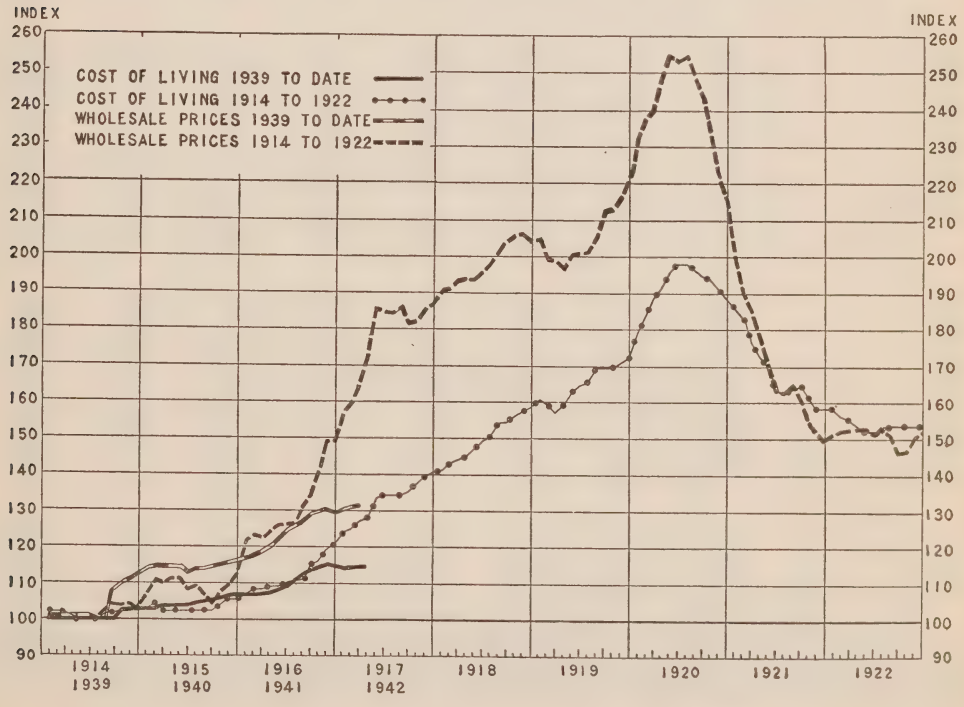
On page 504 of this issue reference is made to a statement by the National War Labour Board as to any adjustment in the cost-of-living bonus to be made for the three-month period May 15 to August 15.

Foods advanced 24.6 per cent between August, 1939, and April, 1942; clothing 19·7 per cent; home furnishings and services 17·0 per cent; fuel and light 14·0 per cent; rent 7·1 per cent and miscellaneous 5·7 per cent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In the LABOUR GAZETTE for December, 1941, on pages 1498 to 1501 under the title "Stabilization of Prices in Canada", there appeared an article outlining the technique of price control and in subsequent issues under the title "Operation of Price Control in Canada" the activities of the Board in the operation of the price control policy are summarized. Prices of fresh fruits and vegetables, furs and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers. On December 19, 1941, the Board announced that an increase in the price of milk by one cent per quart might be authorized in certain areas and under specified conditions.

Authorization for similarly limited increases in retail prices of some kinds of tea in certain provinces, by amounts up to five cents per pound, was announced on January 16. On January 20 the Board re-established the price ceiling on onions, the basic period being the week ended January 10, 1942, and on March 10 the price ceiling on potatoes was re-established the basic period to be February 2 to February 7.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.



The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6.

The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with prices in the period of 1914-1922.

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939=100

DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA

*** For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by P.C. 8253 must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at basic wage rates of twenty-five dollars or more per week, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

Wholesale prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 was 95·0 for April compared with 95·1 for the previous month; 86·6 for April, 1941; 83·1 for April, 1940; and 72·3 for August, 1939, the last prewar month. In the classification according to chief component materials, group changes were slight, three showing fractional advances and three fractional declines while two groups were unchanged. The increase in the general index between August, 1939, and April, 1942, was 31·4 per cent. Canadian farm products advanced 36·1 per cent in the same period, consumers' goods 30·8 per cent and producers' goods 31·5 per cent. The general index advanced 64·1 per cent between July, 1914, and March, 1917, the comparable period during the last war.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of April of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers: milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in

districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (Labour Gazette, December, 1941, page 1462), the price ceiling established by P.C. 8527 (Labour Gazette, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (Labour Gazette, October, 1940, page 995) the Board from time to time fixed maximum rentals for housing accommodation in certain of the cities in the list on page 642. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all the other cities in the list the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail meat prices again averaged slightly higher at the beginning of April than one month earlier reflecting continued strength in livestock markets particularly for cattle. Marketings of cattle and hogs were at a higher level in March than in February, and higher also than in March, 1941. The price of sirloin steak averaged 34·3 cents per pound at April 1, as compared with 34·1 cents at the beginning of March and 31·9 cents for April, 1941. Fresh loin of pork averaged 33·2 cents for April, 33·0 cents for March and 24·9 cents for April, 1941. Bacon at 43·2 cents was fractionally higher than in March and about 10·5 cents higher than one year ago.

A seasonal fall in the price of eggs was reported from most cities, the Dominion average price being 36·5 cents per dozen in April, 38·2 cents in March and 27·0 cents in April, 1941. Production of creamery butter for the first three months of the year was about seven per cent lower than for the similar period of last year while the production of cheese in the first quarter of 1942 was nearly four times that of the same quarter in 1941. The price of butter at 39·1 cents per pound was only slightly higher than for the preceding month and for April, 1941, while cheese at 36·5 cents per pound was the same as for March but was more than 12 cents per pound higher than for April, 1941. Potatoes averaged 40 cents for 15 pounds at April 1 as compared with 25·7 cents at April 1, 1941.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of April, 1942: Halifax $18.50; Charlottetown $17.90; Moncton $18.50; Saint John $18.50; Quebec $16.50; Three Rivers $17.25; Sherbrooke $18.75; St. Hyacinthe $17.50; Montreal $17.75; Ottawa $18.75; Kingston $18.50; Belleville $18.50; Oshawa $18; Toronto $16; St. Catharines $18; Hamilton $17.50; Brantford $17.75.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost-of-living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries are included in "Prices in Canada and Other Countries, 1941" issued as a supplement to this issue of the Labour Gazette. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1930=100 was 158·8 for March, an increase of 0·2 per cent

for the month and of 5·3 per cent over the March, 1941, level. As compared with February, prices were 0·6 per cent higher for food and tobacco, due to an increase of 3·1 per cent in prices of cereals. Industrial materials and manufactures were only slightly changed in this period.

COST-OF-LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 200 at February 28 showing no change from the previous month. There was a slight decrease in the food group, which was offset by a slight advance in clothing prices.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Department, on the base 1926-1930=1,000, was 1,377 for December, as compared with 1,357 for November and 1,345 for October. As compared with November, five of the main groups showed advances in December, while two (textile manufactures and the chemical and manures group) were unchanged.

COST-OF-LIVING.—The official index number, on the base 1926-1930=1,000, was 1,099 for December, as compared with 1,093 for November and 1,080 for October. The increase from November to December was due to higher food prices although meat prices were considerably reduced.

United States

WHOLESALE PRICES.—The Bureau of Labor Statistics, on the base 1926=100, was 97·6 for March, an increase of 0·9 per cent for the month. Except for a fractional decrease in fuel and lighting materials, all groups recorded small advances.

COST-OF-LIVING.—The index number of the Bureau of Labor Statistics on the base 1935-1939=100, was 114·3 at March 15, an increase of 1·2 per cent for the month. Foods rose 1·5 per cent, clothing nearly 4 per cent and housefurnishings 1·3 per cent.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1942

DURING the first quarter of 1942 there were 345 fatal industrial accidents, including deaths from industrial diseases reported by workmen's compensation boards, etc., as compared with 301 fatal accidents in the first quarter of 1941. Of the 345 fatalities in the period under review, 130 occurred in January, 98 in February and 117 in March. Fatal accidents during each year are recorded by quarterly periods in the issues of the LABOUR GAZETTE for May, August, and November of that year, and in February of the following year.

The supplementary list of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contains 31 fatalities for 1941.

In this series of reports it is customary to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners of Canada, certain other official sources, as well as from the correspondents of the LABOUR GAZETTE, and newspaper reports.

Classified by groups of industries, the fatalities occurring during the first quarter of 1942 were as follows: Agriculture, 15; Logging, 58; Fishing and Trapping, 5; Mining, Non-ferrous Smelting and Quarrying, 50; Manufacturing, 61; Construction, 63; Electric Light and Power, 2; Transportation and Public Utilities, 59; Trade, 13; Service, 19.

Of the mining accidents, 33 were in "metalliferous mining", 39 in "coal mining", and one in "non-metallic mineral mining and quarrying, n.e.s".

Of the accidents in manufacturing, three were in "vegetable foods, drink and tobacco", six in "textiles and clothing", one in "rubber products", eight in "saw and planing mill products", eight in "pulp, paper and paper products", one in "printing and publishing", 16 in "iron, steel and products", three in "non-ferrous metal products", two in "non-metallic mineral products", 12 in "chemical and allied products", and one in "miscellaneous products".

In construction there were 20 fatalities in "building and structures", one in "railway", seven in "shipbuilding", eight in "highway and bridge", and 27 in "miscellaneous".

In transportation and public utilities there were 44 fatalities in "steam railways", three in "water transportation", five in "air transportation", six in "local and highway transportation", and one in "storage".

There were four fatalities in "wholesale", and 9 in "retail" trade.

Of the fatalities in service, 14 were in "public administration", one in "custom and repair", three in "personal, domestic and business", and one in "professional".

There was one disaster during the period under review which occurred at Shipshaw, Quebec, on January 11, when 16 construction labourers employed on power development were burned to death in a fire that destroyed a large wooden camp hut.

Other accidents involving the loss of two or more lives were as follows: In a collision of two trains, near Chapleau, Ontario, on January 14, two engineers, two firemen, a brakeman and a trainman were killed.

On March 14, a taxi proprietor, two taxi drivers and a helper died from carbon monoxide poisoning from a snow-choked exhaust pipe while trying to free a car from a snow drift.

While fighting a fire that destroyed an apartment block, following a furnace explosion, three firemen lost their lives in Montreal, on March 1.

On March 13, three female workers in a cap factory at Montreal, perished when trapped in a fire in the factory.

Three pulp millworkers were killed when crushed between belting and pulleys when a machine started while they were adjusting the belting, on March 1, at Port Alfred, Quebec. On January 20, a foreman electrician and a sub-station worker for a pulp mill died from electric burns from a short-circuit on dropping a cold chisel on a wire at Grand Mere, Quebec.

Three female workers in a munition factory died from burns in an explosion and fire at Thetford Mines, Quebec, on January 26. In a gas explosion from a rupture of cooling coils in a chemical plant, near Niagara Falls, Ontario, two workers lost their lives on March 16.

A stope boss and a mucker were killed by a fall of rock at Frood Mine, Ontario, on February 5, and another two miners lost their lives in a similar accident at East Malartic, Quebec, on February 28. Two coal miners were killed when struck by a coal trip, at New Waterford, N.S., on March 23.

On March 17, two labourers employed on power development, at Shipshaw, Quebec, lost their lives when crushed by a large stone falling from an embankment.

While ferrying an aircraft over the Atlantic to Britain, a pilot and a radio operator were lost on January 24.

Supplementary List of Accidents

A supplementary list of accidents occurring during 1941 has been compiled which contains 31 fatalities of which eight were in logging, eight in mining, non-ferrous smelting and quarrying, three in manufacturing, seven in construction, one in transportation and public utilities, two in trade and two in service. Two of these accidents occurred in January, one in March, one in May, one in June, one in July, one in August, four in September, three in October, four in November and 13 in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Dominion Government Employee Receiving Compensation under Alberta Act not Entitled to Sue for Damages

On April 17, Mr. Justice Howson in Alberta Supreme Court dismissed an action for damages brought by a railway mail clerk, an employee of the Dominion Government, who had suffered injury while riding in a mail car owned by the defendant, the Canadian Pacific Railway Company, in an accident caused by the negligence of the company's servants. The plaintiff notified the officer of the Dominion Department of Transport, who is in charge of Dominion Government employees' compensation, of his accident and on the instructions of this officer applied to the Alberta Workmen's Compensation Board for compensation. The Dominion Government paid him his full salary during his absence from duty and he assigned to the Crown the compensation to which he was entitled by virtue of the Government Employees' Compensation Act and the Alberta Workmen's Compensation Act. The medical expenses were in the first instance charged to the Crown, and later both they and the compensation payable were paid to the Alberta Workmen's Compensation Board by the defendant company and refunded to the Crown.

The question to be determined was whether the plaintiff had a right of action against the railway company. Section 24 of the Alberta Act provides that where an accident occurs which would entitle the workman to an action against a person other than his employer he may either sue or claim compensation, but that there is no right of action against an employer in an industry within the Act and that where the workman of an employer in any class is injured due to the negligence of an employee of an employer in another class the Board may direct that the compensation awarded be charged against the latter class. The defendant company is within the Act, and the Board had, with the full knowledge of the employer (the Crown) and the plaintiff, exercised its power under the above section.

The plaintiff claimed that the Dominion Act alone was applicable to him, that the Alberta Act was merely an instrument to determine the liability of the Crown and the rate and amount the Crown must pay if liable, and that he was not affected by other provisions of this Act, notably section 24. The Court held, however, that the evidence showed that the Dominion "in its capacity as master" had submitted itself to the provisions of the Alberta Act as completely as any other employer and that section 24 therefore applied. The plaintiff was entitled to claim and did claim compensation and he therefore had no right of action against the defendant company. No costs were allowed since this was the first time the point at issue had been raised. *Ching v. Canadian Pacific Railway Company,* (1942) 2 Western Weekly Reports 73.

Charge of Violating Lord's Day Act Dismissed

On April 13, Mr. Justice Roy in Quebec Superior Court dismissed a charge against Standard Lime Company of having required its employees to work on Sunday contrary to the provisions of the Dominion Lord's Day Act. The defendant company, which produces lime, admitted the fact but produced letters from the Departments of Munitions and Supply and Labour and from three pulp and paper companies to show that an interruption in its production caused by closing down on Sundays would seriously interfere with the output of companies engaged in producing such goods as cordite for naval guns, nitrating pulp for explosives plants and pulps for export to the United States. In view of the difficulty of having the authors of the letters appear, the Court accepted the letters themselves as evidence. Article 11 exempts from the provisions of the Act the execution of "any work of necessity or mercy" and the Court held that since the work done on Sundays by the defendant company was essential to war production it was a "work of necessity". *Gosselin ès qualité v. Standard Lime Company,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 188.

Night-Watchman Awarded Overtime Rate Provided under Quebec Minimum Wage Act

On October 24, Mr. Justice Archambault in the Superior Court of the District of Richelieu awarded $247.57 to a night-watchman in a building yard in Sorel in payment for 660 hours of overtime work at the rate of 37½ cents per hour, being one and one-half times the minimum rate prescribed for watchmen in Minimum Wage Order 4. The Court held, and the defendant admitted, that the plaintiff came under Order 4 since the collective agreement for the building trades in Sorel sets no rate for night-watchmen. The plaintiff was engaged at $15 per week, the wage prescribed for a 60-hour week. He claimed a total of $478.30 on the ground that, in addi-

tion to overtime, he had been promised a sum greater than $15 for the normal week. At the same time, the defendant argued that he was not entitled to any extra remuneration whatever since he had been paid the wage at which he had been engaged. The Court held, on the one hand, that for the regular week he was entitled only to the rate at which he was hired since this was the legal minimum, but that, on the other, he must be paid for his overtime hours since such payment was required by law and any agreement to the contrary was void. *Potvin v. J.-L. Guay et Frères Ltée,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 155.

Apprenticeship Period must be Continuous to Qualify Workman as Carpenter under Quebec Collective Agreement Act

On March 7, Mr. Justice Langlais in Quebec Superior Court awarded $34.74 to one Higgins, a carpenter's helper, being the difference between the wages he received and those prescribed for his type of work by an agreement under the Quebec Collective Agreement Act. On his behalf, as well as that of a fellow worker, one Gingras, the plaintiff, the Quebec Joint Committee for the Construction Industry, claimed a total of $175.02 on the ground that they should have received a rate for qualified carpenters. Gingras had received the rate for carpenter's helper.

Article 35 of the Act provides:—

> In municipalities where the certificate of competency is not obligatory, the employee shall have the right to avail himself of the recourses provided by this Act or by the decree, if, according to the custom of the trade, industry, business or occupation, he is a skilled workman or in the apprenticeship stage.
>
> For the purposes of this section, the maximum duration of apprenticeship shall be four years.

In the municipality in question no certificate is necessary and the plaintiff submitted that the two workmen had the necessary experience to be regarded as qualified carpenters. The Court found in the case of Higgins, however, that his experience in the trade, amounting to three years, had been spread over a period of 13 years. In the present instance, moreover, he had not worked independently but as an assistant to and under the direction of other carpenters. The case of Gingras was found to be similar. It was held that, on the basis of the definitions given in the best dictionaries and of common sense, the learning years must be consecutive to be considered as a true apprenticeship qualifying a workman as a skilled tradesman. *Comité Conjoint de l'Industrie de la Construction de Québec v. Frechette,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 178.

Assembling of Turbines in Public Water-Works not Construction Work under Quebec Collective Agreement Act

On February 17, Mr. Justice Denis in Montreal Superior Court dismissed an action for unpaid wages which was brought against the City of Montreal by the Montreal Joint Committee for the Building Trades on behalf of a workman in a municipal water-pumping station. The claim was for $129.60, the difference between the wages actually received and those payable under an agreement which had been generalized under the Quebec Collective Agreement Act for the building trades in Montreal.

The employee in question had worked at assembling, sand-papering and painting turbines and pumps. The agreement concerned applies to "all construction work and building operations, including work done by qualified workmen in public buildings . . ." The Court held that the work done in the present case did not come within these terms. *Comité Paritaire des Métiers de la Construction de Montréal v. Cité de Montréal,* (1942) Rapports Judiciaires de Québec, Cour Supérieure 151.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INFORMATION tabulated in the Dominion Bureau of Statistics from 13,037 establishments showed that employment slightly gained at the beginning of April, when the reported staffs aggregated 1,652,810 persons, compared with 1,651,757 in the preceding month. There was further important expansion in manufacturing, together with moderate gains in transportation, communications, services and retail trade. On the other hand, large seasonal losses were indicated in logging, and mining and construction also showed curtailment. The increase on the whole was small, but was particularly interesting in that it was contra-seasonal, according to the experience of earlier years of the record.

The index (based on the 1926 average as 100 rose from 165·1 at March 1 to 165·2 at April 1; at that date in the more recent years of the record, it was as follows:—1941, 141·3; 1940, 111·9; 1939, 104·9; 1938, 105·0; 1937, 103·0 and 1936, 97·4.

The co-operating establishments in the eight leading industrial groups reported that on or about April 1, they had paid their employees the sum of $46,959,087 for services rendered in the week preceding. This was an increase of $845,331, or 1·8 p.c., as compared with the sum disbursed in weekly earnings at March 1, namely, $46,113,756. The per capita average in these industries as at the beginning of April was $28.41, compared with $27.92 at March 1. If the figures for financial institutions are added, the statistics show that the 1,716,261 persons in recorded employment at April 1 were paid the sum of $48,855,431. This was a per capita weekly average of $28.47, being 48 cents higher than the per capita average indicated at the beginning of March.

Unemployment in Trade Unions.—At the beginning of May, 1942, the percentage of unemployment among trade union members stood at 3·3 in contrast with percentages of 4·5 at the beginning of April and 5·5 at the beginning of May, 1941. The percentage for May was based on returns compiled from 2,196 local labour organizations with a total membership of 348,389 persons.

Report of the Employment and Claims Offices.—Reports received from Employment and Claims Offices of the Unemployment Insurance Commission during April, 1942, showed a fairly substantial gain in the average daily placements over those of the preceding month, but a decline from April last year of somewhat greater magnitude. All industrial divisions, except logging, showed improvement over March, the most noteworthy increases being in services, manufacturing and construction, while marked losses in construction, services and agriculture were responsible for the loss recorded from April a year ago. Vacancies in April, 1942, numbered 43,534, applications, 54,297, and placements in regular and casual employment, 31,529.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 116·1 at the beginning of May as compared with 115·9 for April; 109·4 for May, 1941; 104·9 for May, 1940; and 100·8 for August, 1939, the last pre-war month. The slight advance recorded at the beginning of May was due mainly to an advance in the index of the food group, other group changes being fractional. The advance between August, 1939, and May, 1942, was 15·2 per cent as compared with an increase of 28·2 per cent between July, 1914, and April, 1917, the comparable period in the last war. In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 95·2 for May, 1942, as compared with 95·0 for April;

88·5 for May, 1941; 82·2 for May, 1940, and 72·3 for August, 1939. The increase in the index between August, 1939, and May, 1941, was 31·7 per cent and between July, 1914, and April, 1917, was 71·9 per cent.

Business Statistics. — The latest statistics available reflecting industrial conditions in Canada are given in the table on page 653.

The index of the physical volume of business reflecting activity in the production and distribution of goods was about three per cent higher for April, 1942, than for the preceding month and about 10 per cent higher than for April, 1941. For the first four months of the present year the index averaged 137·9, an advance of 8·5 per cent above the average of 127·1 for the similar period of 1941. The general index of employment averaged 21·2 per cent higher in the same comparison.

Greater activity, reflecting the increased war demands, was indicated by the figures for April, for mineral production, manufacturing, and electric power output both as compared with the previous month and with April, 1941, while for the construction industry considerable decline was recorded in both comparisons.

Cumulative totals for the first four months of the current year as compared with the same period in 1941, show the production of coal 12·3 per cent higher while the receipts of gold at the mint were 6·4 per cent lower. Flour production was 19·6 per cent higher, cigarettes released 23·6 per cent higher, production of boots and shoes about 13 per cent higher, steel production 36·9 per cent, and electric power production 19·6 per cent higher. The production of newsprint was 9·5 per cent greater while the exports of lumber declined 16 per cent. In the same comparison also the value of construction contracts declined 27·6 per cent.

In the distribution of goods car loadings advanced 12·4 per cent in the four months comparison, the value of exports 62·4 per cent, imports 36·4 per cent and the value of retail sales 21·6 per cent.

Strikes and Lockouts.—In May the number of strikes and lockouts recorded was 32, involving 6,904 workers and causing 18,047 man working days time loss, as compared with 17 disputes in April, involving 6,838 workers with a time loss of 20,403 days. In May most of the time loss was due to strikes of coal miners at Florence and Sydney Mines, N.S., meat packers at Kitchener, Ont., and bank clerks at Montreal, P.Q. Most of the other disputes involved comparatively small numbers of workers for short periods. In April the important disputes involved coal miners at Florence and Joggins, N.S., machinists at Trenton, N.S., and bakers at Montreal, P.Q.

During May, 1941, there were 34 disputes involving 5,975 workers with time loss of 22,397 days. The important disputes involved steel rolling mill workers at Montreal, P.Q., metal workers at Toronto, Ont., and coal miners at Sydney Mines, N.S., and at Minto, N.B.

Of the 32 disputes during May of this year, 27 were terminated, six in favour of the employer, five in favour of the workers, two in compromise settlements, while 14 were indefinite in result. Five disputes, involving 373 workers were recorded as unterminated at the end of the month.

Industrial Disputes Investigation Act

Nine applications for the establishment of Boards of Conciliation and Investigation were received during the month of May. One board submitted its report. The constitution of six boards established in April was completed. One dispute was referred to an Industrial Disputes Inquiry Commissioner for investigation and a Commissioner submitted his report on the investigation of another dispute. Three board applications were rejected and two disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 660.

Training of Army Tradesmen Under War Emergency Training Program

In a statement issued recently by the Supervisor of Training, Department of Labour, the following summary of the activities of the Training Branch, in the training of army tradesmen was given:

In the early summer of 1940, when the War Emergency Training Program was first commenced, requests were made in Halifax and on the Pacific Coast for the provision of facilities to train certain types of tradesmen in the local units of the Active Army. The training was on a comparatively small scale and up to the end of 1940 only a few hundred enlisted men had participated.

Toward the end of the year, a formal request was made from Military Headquarters to the Department of Labour for training of Army Tradesmen on a much larger scale and arrangements were worked out by which the first groups were admitted to training in

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA*

(10) MacLean's Building Review.

January, 1941. The men referred for training were all enlisted men and selected by Military Headquarters in each district by trade training officers attached to the district staff. Training was given in the Technical Schools and other training centres in all Military districts and covered what was called phase two of the Army trade training with the normal period of instruction lasting about three months. From these schools tradesmen went for the more advanced training either to the Army trade school or to some of the Ordnance schools or work shops. At the beginning of 1941, a certain percentage of the men who entered the classes had had some previous trade experience, but as the year advanced, practically all of the men who entered the classes were entirely new to the trade training. The training given covered a wide variety of occupations including the following: clerks, cooks, coppersmiths, plumbers and steam fitters, tinsmiths, concretors, carpenters, blacksmiths, electricians, instrument makers, motor mechanics, driver mechanics, fitters, artificers, radio mechanics.

So far as possible, training was given on practical work projects. For example, quite a few buildings were constructed for the use of the Army or for training purposes utilizing the services of such tradesmen as concretors, bricklayers, carpenters, electricians, plumbers and tinsmiths.

In other classes the Army Tradesmen made their own tools for future use in the Army or turned out specific articles for the various units.

The men under training received their usual pay and allowances from the Army while the War Emergency Training Program paid the entire cost of instruction.

During the fiscal year ending March 31, 1942, training had been given to 18,000 tradesmen.

Appointments To National War Labour Board

Announcement was recently made by the Honourable Humphrey Mitchell, Minister of Labour, that Mr. R. H. Neilson had been appointed as Chief Executive Officer of the National War Labour Board, consequent upon the return to Canadian Industries Limited of the former incumbent of the position, Mr. E. R. Complin. Mr. Neilson has been Secretary of the National Board since its inception and was formerly on the staff of the Department of Labour. Mr. J. F. Compton has been appointed Acting Secretary. All communications to the National Board should be addressed to the Chief Executive Officer.

Controller of Man-Power Records

The Civil Service Commission has appointed Mr. Harry Hereford, Ottawa, to be Controller of National Selective Service, Man-power Records, Department of Labour. Since 1930, Mr. Hereford has acted as Dominion Commissioner of Unemployment Relief and previously filled the position of Industrial Engineer in the Department of Labour.

Farm Labour Program in Ontario

In the April issue of the LABOUR GAZETTE, pages 443-446, a detailed article appears entitled "Wartime Farm Labour Program in Ontario" which reviews measures taken in 1941 to meet the shortage of farm labour in Ontario in that year and outlines plans to meet a similar situation this year.

On May 11, an Order in Council, P.C. 3903 was passed permitting the Dominion Government "to assist the Province of Ontario to execute a plan for recruiting, transporting to, and placing upon farms within the Province, during the fiscal year 1942-43, labourers, male and female suitable for farm work, who are available in other provinces and in the urban centres of said Province, to the end that a threatened curtailment in agricultural production essential to the national war effort may be averted."

The Order in Council authorized the Dominion Government to enter into an agreement with the Province of Ontario and that as part of the Activities under the plan it is proposed "to employ certain of the persons of the Japanese race moved from the restricted areas of Canada as labourers on sugar beet farms and at other agricultural work in the Province of Ontario."

To finance the plan, $100,000 has been allotted the Department of Labour, it being stipulated in the Order in Council that an amount not in excess of $15,000 be expended from the appropriation "to provide necessary housing accommodation, policing, and all other care" of Japanese moved into the province and employed under the terms of the agreement. Towards this latter cost the Province is not liable to contribute.

In the House of Commons on June 9, while speaking on the subject of the supply of farm labour, the Minister of Labour, Honourable Humphrey Mitchell, referred to this plan and said:

"With respect to farm labour this summer, I might say that last year we had an agreement with Ontario, in view of the threatened shortage of labour in agriculture; the dominion government matched dollar for

dollar with the province, up to an expenditure of $60,000 by the dominion, to provide farm labour, and under this scheme 23,000 persons were recruited for farms in Ontario. I think it is agreed that while there may have been difficulties, there was no acute shortage of labour in Ontario to harvest the crops. I discussed the question with the Minister of Agriculture last February, and we immediately set in motion a policy somewhat similar to that which we adopted with respect to Ontario last year. This year we are prepared to match dollar for dollar with Ontario up to an amount of $100,000, and we are hopeful that with the same enthusiasm and ingenuity, the farm labour problem will be solved in Ontario again this year. I have enough faith in the vim and vigour of the Ontario government, working in co-operation with our own, to believe that we shall be able to meet the farm labour problem in Ontario satisfactorily this summer. Similar offers have been made to all the other provincial governments, but apparently they wish to handle the matter themselves, and after all, that is sound policy, for the best kind of government in some things is the one which is closest to the people. Up to date we have had no request for similar assistance to that which we are giving to Ontario."

Personnel Administration Courses in Canadian Universities

In the May issue of the Labour Gazette, page 505, reference was made to the participation of the Universities of Toronto and Queen's in the establishment of government sponsored personnel administration courses. Since that time, McGill University, Montreal, has also agreed to offer similar courses, the dates of the courses being June 15 to 27 and August 17 to 29.

Minimum Working Hours Established in Great Britain

According to a Canadian Press report the British Ministry of Labour issued an order on May 21 establishing minimum working weeks of 52 hours in industries and 46 hours in offices, with maximum annual vacations of two weeks.

Ministry of Labour officials said the order could not be made compulsory, but that the specified hours would be a determining factor in granting deferments from military service and authorizing employment of available labour.

"Henceforth, these hours will be the guide in decisions whether firms should be granted additional staff or be permitted to retain the staffs they already have.

"If a plant is not working its staff fifty-two hours weekly it may be required to show why some of its people should not be put to work somewhere else. If it is giving over a fortnight vacation, the Ministry may decide it could spare some workers."

The Ministry reported that some industries are still working "peacetime hours" while others have imposed even longer war work weeks than the new minimum, so it had been decided to "level things up."

Organization of Labour Supply in Great Britain

The Seventh Report of the British House of Commons Select Committee on National Expenditure for the 1941-42 session, issued on March 26, contains a critical analysis of the present policy regarding the organization of labour supply for war purposes and deals with the following specific problems: the distribution of manpower between industry and the fighting services; the recruitment of labour into the munitions industry, with special attention being given to the employment of women and such problems arising therefrom as the simplification of engineering processes, the employment of women on a part-time basis, and the provision of transport, housing, shopping and nursery facilities; the training of workmen, especially in government training centres; and the organization of departmental machinery for the administration of the various programs in effect. (Summaries of other reports of the Select Committee will be found in the Labour Gazette, February, 1942, pp. 188-91; February, 1941, pp. 114-16; April, 1941, pp. 411-19.)

The general conclusion is that at present there is not sufficient co-ordination of the different schemes and it is suggested that greater attention should be given to the problem as a whole as distinct from special aspects of it which have become acute. In particular it is recommended that administrative responsibility should be more centralized. The existence of organizations such as labour branches of the production Departments which handle from a special point of view problems already dealt with by Ministry of Labour and National Service, leads, it is felt, both to overlapping and to incomplete coverage of the field.

New Regulation of Hours for Women and Young Persons in Great Britain

The Hours of Day Work in Factories (Women and Young Persons) Order issued January 23, 1942, under the Defence (General) Regulations exempts employers who receive the District Factory Inspector's permission to avail themselves of the Order from the pro-

visions of the Factories Act relating to hours and holidays for women and young persons.

At the outset of the war, exemptions from these provisions of the Act were granted only to individual firms. Later emergency orders were made applicable to whole industries such as the general emergency order for engineering and certain other classes of works issued in June, 1940. To avail themselves of any of these orders, either individual or general, employers had to secure the permission of the District Factory Inspector, and were usually required to comply with alternative conditions of work laid down in the orders. Now an order has been made applicable to day work in all factories. It does not apply to shift workers.

A schedule affixed to the Hours of Day Work Order lays down the following conditions of work for women and for young persons under 18 years of age to be observed by employers covered by the Order. They include a maximum work-week to be set by the Inspector somewhere between 48 and 55 hours and maximum daily hours of 10½ on week days and from 5 to 8 on Saturdays as the Inspector may determine. These hours are exclusive of intervals for meals and rest. The period of employment may not exceed 12 hours in any day and must be between 7 a.m. and 9 p.m. on week-days unless an order is in force specifying an earlier hour than 7 a.m. at which work may commence. On Saturdays work must cease by 1 p.m. or at any later hour up to 5 p.m. specified by the Inspector. Sunday work is forbidden.

A woman or young person may not be employed more than 4½ hours without an interval of at least ½ hour for a meal or rest, but if a 10-minute break is allowed in the course of a spell, it may be lengthened to 5 hours. The total time for intervals must be at least 1¼ hours if the working day exceeds 10 hours.

Young persons under 16 may not work more than 48 hours a week, nine hours a week-day or five hours on Saturday. Their period of employment must not exceed 11 hours and must be between 7 a.m. and 6 p.m. on week-days and 7 a.m. and 1 p.m. on Saturdays unless another order permits work to start at an earlier hour. Young persons employed for a five-day week may work a 10-hour day and may have a period of employment on any one day in the week up to 11½ hours.

The hours permitted under this Order are considerably longer than those prescribed in the Factories Act which calls for a 44-hour week for young persons under 16, and a 48-hour week and nine-hour day for women and young persons over 16 with provision for a limited amount of overtime in a year. The provisions of the Order relating to spells and intervals are identical with the Factories Act.

Employment of School Children in Agriculture in Great Britain

Defence regulations prescribing uniform conditions of employment in agriculture for school children in Great Britain were issued early in May. They supersede the varying by-laws on the subject passed by local education authorities under the Children and Young Persons Act.

The regulations permit children over 12 to be exempted from attendance at school for 20 half-days in any year if the permission of the parent or guardian has been obtained. In cases of emergency to meet urgent seasonal needs, inspectors are empowered to grant exemptions beyond the prescribed limit. Local education authorities are urged to fix the school holidays at times most suited to local agricultural needs.

The regulations lay down conditions of employment which govern both holiday and term-time work. A seven-hour day, 36-hour week and 4-hour spells are the maxima allowed with a break of at least one hour required at the end of a spell. Wages at not less than the statutory rates must be paid. Suitable arrangements for supervision and transportation of the children must be made. Medical certificates of fitness may be required by the local education authority.

The Board of Education in a circular issued May 5 in connection with the regulations asked war agricultural executive committees to discourage the employment of children under 14 until all other sources of labour were exhausted. It suggested that they co-operate with local education authorities, women's institutes and other local interests in setting up district committees to determine the needs of the farms, maintain contact with the schools and supervise the conditions of work.

The circular suggested that children under 14 should work half-days only and that an interval of at least 1½ hours should be allowed between work and school. It also recommended that arrangements be made to provide employed children with a midday meal at school canteens or British Restaurants.

Strike Avoided in North Wales Coalfields as Union Achieves Recognition

On April 20 a court of inquiry appointed by the Minister of Labour under the Industrial Courts Act, 1919, achieved a settlement of a dispute between the North Wales Mineworkers' Association and the Point of Ayr Colliery which had led to a threat of a strike involving

8,000 men in the North Wales coalfield. The colliery is the last one in the country where a company union survives after the general strike of 1926 and the difficulty arose in connection with the attempt of the Mineworkers' Association to obtain recognition on equal terms with the company union. Matters came to a head when, after 47 miners had been discharged due to a temporary shutdown of part of the mine in December, only three members of the Association were reinstated.

Strike notices to become operative in two weeks were given on March 29. Conciliators from the Mines Department effected a temporary settlement a few hours before these notices fell due. The Association agreed to withdraw the notices on condition that the company should meet its demand for recognition, or failing that, that a court of inquiry should be set up, the recommendation of the court to be binding on both parties.

The company's proposals proved unsatisfactory to the Association and as a result a court of inquiry consisting of Sir John Forster was appointed. At the end of the third day a settlement was reached on the following terms: (1) that contributions from members of the Association should be collected on the colliery premises in the usual trade union manner; (2) that complaints of members should be handled through the officials of the Association; (3) that there should be no discrimination against members of the Association; and (4) that the Association and the company union should have separate notice boards on the colliery premises and that neither should hold propaganda meetings on the premises.

Control of Wages and Profits in Australia

Profits and wages are being controlled in Australia under the National Security (Economic Organization) Regulations which were issued under the National Security Act, 1939-1940, on February 19 and amended on February 24 and March 9. (See LABOUR GAZETTE, February, 1942, page 131). The regulations limit profits, control interest rates, prohibit certain transactions in real property and stocks and stabilize wages. Prices were already controlled under the National Security (Prices) Regulations, August 22, 1940, as amended, which replaced Regulations first issued shortly after the outbreak of war. The Economic Organization Regulations were submitted to a committee of the House of Representatives and as a result of its recommendations the sections relating to profits, interest rates and transfer of property were changed (amendment of March 9). These sections now contain the following provisions: (1) Effective on a date to be fixed by a resolution of both Houses of Parliament but not to be earlier than July 1, profits will be limited to 4 per cent of capital. (2) Real property and stocks and debentures may not be sold or otherwise disposed of except by permission of the Government and the Government may fix the prices at which stocks and debentures may be sold. In this way, it is hoped to eliminate many forms of speculation and concentrate capital transfers on immediate war needs. (3) The Commonwealth Bank has power to fix interest rates except the rates paid by the Commonwealth.

Another section stabilizes wages. No employee, including a director of a company receiving remuneration of any kind, may be paid a rate different from that prescribed by any award, order or determination of the Commonwealth Court of Conciliation and Arbitration or other arbitration authority which was in effect on February 10, or, if there is no such award, a rate different from that actually in effect on that date. However, employees who were already receiving a rate higher than that in an award will not suffer any reduction. No arbitration authority may alter any rate in effect on February 10 except to remove anomalies. Existing arbitration awards and agreements commonly provide for cost-of-living adjustments, and such adjustments are not interfered with by the present regulations. Increases resulting from promotions or from schemes whereby the employee's wages advance periodically to a maximum also continue to be permitted.

A further clause prohibits employers or employees from absenting themselves from work without reasonable cause, proof of which lies upon the absentee.

Australian Regulations on Replacement of Men by Women in Industry

The increasing absorption of women into men's jobs in Australia has brought about the regulation of the wages of women replacing men and the removal of some of the restrictions to which the employment of women in factories has been subject in the past. Regulations on these matters were issued on March 25, 1942, under the National Security Act, 1939-1940. These superseded preliminary regulations, passed on March 2, which provided, first, that any woman could be employed in the factories of the Department of Munitions or Aircraft Production or, with the approval of the Director-General of Munitions or Aircraft Production, in other factories, on

any work customarily performed by men or which is normally reserved to men by agreement or by an award, order or determination of any authority, and second, that such women would be subject to conditions respecting wages and other matters to be set forth in regulations and in the meantime to such wages and conditions as the Ministers of Munitions and Aircraft Production might determine.

The new regulations repeat the provision about the employment of women in Government and other factories, and they further provide that notwithstanding any State law women may on the approval of the Minister of Labour, be employed in any factory engaged in war production. In the latter case their employment will be subject to such conditions of safety, health and welfare as the Minister may stipulate.

The main purpose of the regulations, however, is to set forth a policy regarding the employment of women on men's work and especially regarding the wages they are to receive, and to establish an administrative authority to put this policy into effect. The Minister of Labour may appoint a Women's Employment Board, consisting of a chairman and one representative each of employers and employees. Any employer who wishes to employ women on work for which a rate for men, but no rate for women, has been set by an industrial award, order, determination or agreement, must apply to the Board. The Board will determine whether women may be employed on the work in question, whether they should first be employed on probation, and what percentage of the men's rate they should receive. In determining the wage rate the efficiency of women in performing the work will be taken into account, but in no case may the rate be less than 60 per cent nor more than 100 per cent of the men's rate. Any woman who has been employed on men's work may apply to the Board to have her rate determined, but in no case may the rate be reduced. When women are employed in the factories of the Departments of Munitions and Aircraft Production or in another factory with the approval of the Minister of either of these Departments, the secretary of the Department must notify the Board, and this notification will be treated as an application. Any rate established by the Board will be retroactive to the date on which the woman in question commenced work. A decision of the Board has the same effect in all respects as an award or order of the Commonwealth Court of Conciliation and Arbitration and supersedes any conflicting decision of any Commonwealth or State arbitration authority. The Chairman of the Board has the same authority as the Commonwealth Court in regard to summoning witnesses or taking evidence.

Any establishment where women are replacing men may be inspected by a representative of the appropriate trade union, and in cases where women are employed on the approval of the Minister of Labour the Minister must first consult the union.

Plan of U. S. War Man-power Commission to Stop "Labour Pirating"

On May 28, Mr. Paul V. McNutt, chairman of the U. S. War Man-power Commission, announced that one or more directives would shortly be issued to compel employers in war industries to hire new employees only through, or with the approval of, the United States Employment Service and to force workers "to secure any new job requiring a critical skill through the United States Employment Service or in accordance with methods approved by it."

The Commission's immediate objective, it was explained, is to stop "labour pirating" so as to help stabilize both labour and wages, but the overall objective, as indicated in a later statement issued by Mr. McNutt, is to insure the most efficient use of the nation's civilian man-power in the prosecution of the war.

In his second statement Mr. McNutt said that if employers failed to stop pirating workers from each other they would be reported to the government contracting and priorities agencies for "appropriate action," and that if workers "refused to accept suitable employment in a war industry without reasonable cause," they would be reported to the Selective Service System "for consideration in connection with any request for deferment on occupational grounds."

Several labour organizations have protested the Commission's plans, chiefly on the ground that they were announced without being passed upon by the labour members of the Management-Labour Policy Committee.

U. S. Survey of Occupations Suitable for Women

The results of a survey made by the United States Employment Service covering 1,859 jobs in war plants and 937 in non-war plants, indicate that many women are successfully performing the duties of men in a wide variety of trades and industries. The results of this study have been published in a booklet entitled *Occupations Suitable for Women*.

Mr. Paul V. McNutt, Chairman of the United States War Man-power Commission, commenting on the survey said that "women have shown that they can do, or learn to do, almost any kind of work. Thousands already are working in jobs which have customarily been filled by men and the development of our man-power mobilization program may require a more general use of those who have the physical strength and other characteristics necessary to do the work."

Equal Pay for Equal Work Law in Michigan

A State law embodying the principle of equal pay for equal work done by men and women was upheld in a recent court award in Michigan. The Court granted 29 women employed by General Motors Corporation a total of $55,690 representing the difference between the hourly rate of 76 cents paid to women and the rate of 97 cents received by men on the same work.

The case arose under a law passed in 1931 forbidding employers to discriminate between the sexes in the matter of wages. The validity of the law was upheld by the Michigan Supreme Court in passing on a preliminary decision in the present case and the United States Supreme Court refused a review.

Meeting of Emergency and Reconstruction Committee of I. L. O. in London

The emergency committee of the International Labour Organization, which was appointed by the Labour Conference in New York last autumn to give effect to resolutions on post-war emergency and reconstruction held a meeting in London on April 23-25.

According to a *London Times* report, its principal decision was to set up an international advisory committee of eminent men who will be chosen for their ability to frame social and political programs on the basis of research by economic and financial experts. Much information is already in the possession of the I.L.O., and in the United Kingdom, as well as in other countries, there is active study of world conditions and of measures of reconstruction that will be necessary after the war, on the international as well as the national plane.

The I.L.O. advisory committee will draw together the results of this work and examine them as well as the policies that may develop from the standpoint of the social aims of the I.L.O. There is no suggestion that the I.L.O. should itself be responsible for the application of all these policies, though some would fall within its sphere, but that it should consistently apply to all proposals the test of how far they will add to the well-being and standard of life of the masses of the people. The I.L.O. aims at being well equipped with factual knowledge and concrete proposals for taking its place in world reconstruction conferences and discussions.

Conference of I. L. O. Joint Maritime Commission

Shipowners and seamen from at least twelve of the United Nations met in London in the latter part of June to discuss war-time conditions as they affect merchant seamen. The meeting which brought them together was a session of the Joint Maritime Commission of the International Labour Office and included shipowners and seamen's leaders from Great Britain, the United States, Canada, Australia, India, Belgium, China, Free France, Greece, the Netherlands, Norway, and Sweden.

The Joint Maritime Commission discussed questions affecting the life and well-being of seamen afloat and ashore, and had before it a series of documents prepared by the International Labour Office dealing with life-saving appliances, organization of welfare arrangements in ports, compensation for unemployment and loss of effects due to torpedoing of ships, allowances for the families of seamen captured by the enemy, manning pools, etc.

The Commission was set up by the I.L.O. over twenty years ago in order to secure the direct participation by shipowners and seamen in the framing of international regulations on conditions of employment of officers and men of the merchant navies of the world. The work of the Commission and of the International Labour Conference during the last twenty years has resulted in the adoption of 16 international Conventions or Treaties (in addition to a number of Recommendations) which have been ratified by 39 countries. Some of these Conventions, e.g., one adopted in 1920 on unemployment indemnities in case of shipwreck, have proved of inestimable value to seamen under war conditions.

Canada has ratified six of these Treaties. The part of the International Seamen's Code that the Dominion Government has thus agreed to apply covers the following provisions: prohibition of employment on vessels of children under fourteen; payment of unemployment indemnities to shipwrecked sailors; fixing at eighteen the minimum age of trimmers or stokers; examination of physical fitness of seafarers under eighteen; supervision and enforcement of seamen's articles of agreement; and, lastly, marking of the weight on heavy packages transported by water.

54865—2½

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of May nine applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From employees in the Electric Light and Power Department of the City of Calgary, Alta., members of Local 348, International Brotherhood of Electrical Workers. The dispute, which had arisen out of the employees' request for the payment of wartime cost-of-living bonuses or equivalent increases in basic wage rates, was said to affect 64 workers directly and 350 indirectly. Owing to the fact that the Province of Alberta had repealed its enabling legislation, the provisions of the Industrial Disputes Investigation Act were not applicable to the dispute and a board could not be established.

2. From employees in the Ordnance Plant of the Dominion Bridge Company, Limited, Burnaby, B.C., members of Local 2655, Steel Workers Organizing Committee. The dispute, which had arisen out of the employees' request for union recognition and a collective bargaining agreement providing for increased wages, changes in classifications of labour and in hours of work and improved working conditions, was said to affect 425 workers directly and 460 indirectly.

3. From the Wabash Railroad Company. The dispute, affecting engineers, firemen, conductors and brakemen in the company's employ in Canada, members of the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive firemen and Enginemen, the Order of Railway Conductors and the Brotherhood of Railroad Trainmen, was said to have arisen out of a disagreement as to the disposition of differences between the company and its Canadian employees which are found to be incapable of settlement by means of the grievance procedure embodied in existing agreements between the parties concerned. Approximately 250 workers were said to be directly affected and 500 indirectly.

4. From employees of Brunner Mond, Canada, Limited, Amherstburg, Ont., members of Local 89, United Automobile Workers of America. The dispute, which had arisen out of the employees' request for union recognition and a collective agreement, was said to affect 480 workers directly.

5. From employees of the Dominion Wire, Rope and Cable Company, Limited, Lachine, P.Q., members of Lodge 1288, International Association of Machinists. The dispute, which had arisen out of the employees' request for union recognition and a new collective agreement providing for increased wages, holidays with pay, changes in hours of work and improved working conditions, was said to affect 115 workers directly.

6. From employees of the Distillers Corporation, Limited, Ville Lasalle, P.Q., members of the Federation of Commercial and Industrial Employees. Approximately 300 employees were said to be directly affected by the dispute, which had arisen out of their request for union recognition, changes in classifications, seniority rights, grievance procedure, wage adjustments, wartime cost-of-living bonuses, payment for overtime and for work performed on legal holidays, and the cessation by the employing company of alleged unfair labour practices.

7. From employees of McLennan Foundry and Machine Works, Limited, Campbellton, N.B., members of Lodge 1456, International Association of Machinists. The dispute, arising out of the employees' request for union recognition was said to affect 128 workers directly.

8. From employees of West Coast Shipbuilders, Vancouver, B.C., members of Local 1, Boilermakers and Iron Shipbuilders' Union of Canada. The dispute, which had arisen out of the employees' request for a closed shop union agreement, was said to affect 1,400 workers directly and 6,500 indirectly.

9. From employees of the Quebec Asbestos Corporation, Limited, East Broughton, P.Q., members of the National Catholic Union of Asbestos Workers of East Broughton. The dispute, which had arisen out of the employees' request for union recognition and a collective agreement providing for increased wages and the payment of wartime cost-of-living bonuses, was said to affect 130 workers directly.

Boards Fully Constituted

During the month of May the Minister of Labour completed the constitution of the Boards of Conciliation and Investigation established in April to deal with disputes involving the McCord Radiator and Manufacturing Company, Gar Wood Industries of Canada, Limited, the Champion Spark Plug Company of Canada, Limited, the Canadian Bridge Company, Limited, and the Canadian Steel Corporation, Limited, and their respective employees, members of Local 195, United

Automobile Workers of America (Labour Gazette, May, 1942, pages 513-514). The personnel of each of the boards is as follows: His Honour Judge A. J. Gordon, Windsor, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Mr. W. H. Furlong, K.C., also of Windsor, appointed on the nomination of the employer.

The constitution of the Board of Conciliation and Investigation established in April to deal with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, members of Lodge 712, International Association of Machinists (Labour Gazette, May, 1942, page 514), was completed during the month of May. The personnel of the board is as follows: the Honourable Mr. Justice Paul Mercier, Chief Justice of the Circuit Court of Montreal, chairman, appointed on the joint recommendation of the other two members; Mr. James Somerville, appointed on the nomination of the employees; and Mr. D. A. Paterson, appointed on the nomination of the employer. All three reside in Montreal.

Dispute Referred to Industrial Disputes Inquiry Commissioner

On May 30 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dismissal of certain employees of Viau and Son, Limited, St. Jerome, P.Q., allegedly on account of their membership in the International Moulders and Foundry Workers' Union of North America.

Report of Industrial Disputes Inquiry Commissioner

On May 20 a report was received from Mr. Louis Fine, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Consumers' Gas Company of Toronto, and its employees, members of Local 12291, District 50, United Mine Workers of America, which had arisen out of the alleged unjust dismissal of a union member (Labour Gazette, May, 1942, page 513). The Commissioner persuaded both parties to bind themselves in advance to accept his decision as arbitrator, and the employees withdrew their application for the establishment of a Board of Conciliation and Investigation. As arbitrator, Mr. Fine ruled that the company, on grounds of clemency, should reinstate the dismissed workman in his former employment without loss of seniority, but without retroactive pay.

Other Settlement

The application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Gregg Manufacturing Company, Limited, Winnipeg, and its employees (Labour Gazette, November, 1941, page 1342) was withdrawn during the month of May. Since the principal matters in dispute had reference to the employees' earnings, the question was referred to the Manitoba Regional War Labour Board for decision.

Other Applications Rejected

The Minister of Labour has decided against the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Coal Valley Mining Company, Limited, Coal Valley, Alta., and certain of its employees, members of a trusteeship (Labour Gazette, April, 1942, page 391). The application did not meet the requirements of the statute in certain respects.

The application for the establishment of a Board of Conciliation and Investigation received in April from certain beef butchers in the employ of Canada Packers, Limited, Montreal (Labour Gazette, May, 1942, page 513), did not meet the requirements of the statute in certain respects. An officer of the Department of Labour subsequently ascertained that the employees concerned, who were said to have been discharged following their refusal to work overtime at regular rates of pay, had obtained employment elsewhere.

Report of Board in Dispute between Sorg Pulp Company, Limited, Port Mellon, B.C., and Its Employees

The Board of Conciliation and Investigation established to deal with a dispute between the Sorg Pulp Company, Limited, Port Mellon, B.C., and its employees, members of Local 297, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (Labour Gazette, May, 1942, page 514) has submitted its findings to the Minister of Labour.

The personnel of the board was as follows: His Honour Judge J. O. Wilson, Ashcroft, B.C., chairman, appointed on the joint recommendation of the other two members; Mr. Percy R. Bengough, Vancouver, B.C., appointed on the nomination of the employees; and Brigadier General J. A. Clark, K.C., also of Vancouver, appointed on the nomination of the employer.

The report of the board is signed by the chairman and Mr. Bengough. A minority report was presented by General Clark.

The texts of the board's report and General Clark's minority report are printed below.

Report of Board

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Canada.

Re: Dispute between Sorg Pulp Company, Limited, and its employees employed at the plant at Port Mellon, B.C., members in good standing of Local No. 297 of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers.

MATTERS IN DISPUTE REFERRED TO THE BOARD

1. The refusal of the Company to recognize and deal with the above-described Union as the agency of the employees of the Company at Port Mellon for the purpose of collective bargaining.

2. General conditions around the plant and townsite.

1. The Board of Conciliation and Investigation established by you was composed of Brig. Gen. J. A. Clark, nominated by the employer; Percy R. Bengough, nominated by the Union, and His Honour Judge J. O. Wilson, chairman, agreed upon by the other nominees.

2. The Board held sittings as follows:—

At Vancouver, April 23rd and 24th;
At Port Mellon, May 4th, 5th and 6th;
At Vancouver, May 7th, 8th, 9th, 11th, 12th, 13th, 14th and 15th.

3. The Company was represented by Mr. R. H. Tupper; the Union by Mr. Killen.

4. Verbal and documentary evidence was submitted by both parties. Spoken and written arguments were delivered.

5. The Company operates at Port Mellon a mill producing sulphate (kraft) pulp. It acquired this mill, as a going concern, in July, 1941. The Union was organized at about the same time. While, as above said, the mill was a going concern, it was an inefficient production plant and large expenditures have been incurred for its rehabilitation and improvement. Even larger expenditures are planned by the Company and a general scheme of development is under way.

6. Port Mellon is what is known as a "company town". The majority of the employees live, if bachelors, in Company bunkhouses, and, if married, in houses owned by the Company and rented to the employees.

7. The Union commenced organization at Port Mellon practically contemporaneously with the acquisition of the plant by the Company. On March 3 the Union had a membership of 200, a substantial majority of the Company's employees. On May 5, when this Board sat at Port Mellon, the Union had 125 members in good standing. The number of persons employed by the Company and eligible for Union membership on that date was 230. In addition, the Company employs 27 other persons, members of the office and supervising staff, not eligible for Union membership.

8. The Company's product, sulphate pulp, is dried and baled and sent to a factory in Ohio, owned by the same principals who own the Port Mellon plant, for manufacture into paper.

9. There was considerable evidence presented as to the second matter referred to the Board, viz., general conditions around the plant and townsite, and the Board inspected the plant and townsite. Unsatisfactory conditions were found as follows:—

(*a*) Showers and toilets are required in the recovery room in the plant.
(*b*) The older bunkhouses are unsatisfactory and should be replaced.
(*c*) Some of the married quarters are unsatisfactory and should be replaced.
(*d*) There is a general untidiness and lack of sanitation about the plant and the townsite.

10. The Company has made and is carrying on a steady improvement in these conditions, and is faced with considerable difficulty in getting materials and labour for these purposes. The general slovenliness and lack of sanitation referred to are not altogether the fault of the Company, the employees being just as much to blame. Representatives of the Union and the Company agreed that their differences about conditions were subsidiary to the question of union recognition, and that once the air was cleared by a settlement of that question, their differences as to conditions at the plant and townsite could probably be cleared up. The Board, therefore, in this connection recommends only that the Company should use the utmost diligence in rectifying the conditions above noted, and that the employees should co-operate by taking a greater interest in the maintenance and sanitation of the premises occupied by them.

11. The Union has, since July, 1941, sought recognition by the Company as the representative of the employees, for the purpose of collective bargaining. There have been numerous meetings between representatives of the Company and the Union. However, the

parties have beeen for some time at arm's length in that the Company while willing to treat with committees simply as employees, refused to treat with them as representatives of the Union. The employee committees, on the other hand, refused to discuss their differences with the Company's representatives unless they were recognized as representatives of the Union. The result has been a practical stalemate in all proper management-worker relationship, resulting in a general bad feeling at the plant.

12. Before the Board, representatives of both the Company and the employees agreed that the logical consequence of recognition of the Union as the agency of the employees for the purpose of collective bargaining would be a foregathering of the parties for the purpose of executing a written contract covering their relations. The Company strongly objects to being compelled to execute such a contract.

13. The Company raised, but did not strongly press, some specific reasons for opposing union recognition. The Union was objected to as being a member of an international organization, controlled from the United States. Evidence was given purporting to show that the Company, operating under a financial handicap as compared with other British Columbia pulp companies, could not bear the added financial burden which might be created by the imposition of Union working conditions. It was also argued that, since the Regional War Labour Board had assumed control of wages and working hours, there were no essential management-worker relations to be regulated by a Union contract. However, the main contention of this Company was that in the absence of direct statutory authority it should not be required to negotiate and contract with a Union against its will. The deliberations of the Board thereafter were, therefore, on the general principle involved rather than on the particular situation at Port Mellon.

14. It appears that the International Union of Pulp, Sulphite and Paper Mill Workers, of which Union No. 297 is a local branch, has contracts with 80 per cent of Canadian pulp and paper mills. It also has contracts with two pulp and paper mills in British Columbia employing the greater number of persons in this province engaged in that business.

15. The Board, having in mind the principles set out in P.C. 2685, and having read with approval the principles enunciated in the Report of the Board of Conciliation and Investigation *re* Great Lakes Shipping Companies, as reported at page 95 of the LABOUR GAZETTE for February, 1941, recommends that the Company recognize the Union as the representative of the employees for the purpose of collective bargaining, and enter into negotiations with a view to concluding a written contract.

16. The Board has seen a copy of the form of contract submitted by the Union to the Company for execution. The Board recommends that the initial contract concluded between the Union and the Company should not include paragraph 3 of Section 2, requiring the Company to discharge persons who drop their membership in the Union.

17. The representative of the Company, at the conclusion of the hearing of evidence, argued that the Board had no right to make a recommendation in regard to union recognition. His ground for this contention was that the matter of union recognition was not a "dispute" within the meaning of Section 2 of the Industrial Disputes Investigation Act. The contention was rejected by the Board, General Clark dissenting.

18. General Clark also dissents on the question of union recognition and will file a minority report.

19. Efforts were made at conciliation throughout the sittings, but the parties were so wholly at variance on the question of union recognition that no agreement could be reached. Despite this fundamental difference of opinion, the whole proceedings were conducted on a high plane and without acrimony, and it is hoped this attitude will continue in future relations between the Company and the Union.

All of which is respectfully submitted.

(Sgd.) J. O. Wilson,
Chairman.

(Sgd.) Percy R. Bengough,
Member.

Vancouver, B.C.,
May 15, 1942.

Minority Report

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Canada.

Report of Brigadier General J. A. Clark re dispute between Sorg Pulp Company, Limited, and its employees

I have had an opportunity of perusing the report of the chairman, His Honour Judge J. O. Wilson, and Mr. Percy Bengough. I find myself in disagreement with certain portions of the report.

Paragraph 9 of the majority report would indicate that there was a dispute regarding showers and toilets, bunk-houses, married quarters and sanitation. It is true that these conditions were referred to in evidence and observed by the Board, but there was no dispute with regard to them.

In his opening address Mr. Killen, representing the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers, stated that union recognition was the issue to be considered by this Board. In a written brief submitted after the evidence was concluded Mr. Killen stated:—

"The issue to be acted upon by the Board is whether or not the Sorg Pulp Company should recognize the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers as the agency representing the company's employees for the purpose of collective bargaining."

The Sorg Pulp Company did not submit any other problem for the consideration of the Board. Thus the issue is a simple one, viz.: Is this Board prepared to recommend union recognition by the Company, same to be implemented by an agreement reduced to writing covering the terms of recognition? I refer to an agreement reduced to writing advisedly, because the union representative stated frankly that an agreement is expected.

The Company has been aware of the existence of the Union in its plant, has placed no obstacle in the way of its organization, and has permitted it to function free from any control by the management. Mr. Turner, the managing director of the Company, stated that he has negotiated without objection with officers of the Union, and it is common ground that Mr. Killen, the Union representative, has spent considerable time during the past nine months at Vancouver and Port Mellon negotiating with officials of the Company. He admits that he has had most courteous treatment from the Company at all times. Thus it is apparent that if the men wish to be represented by officers of the Union in their negotiations with the management, they may select officers of the Union for that purpose and in my opinion the management must deal with them. A misunderstanding has existed in the past due to the fact that the representatives have been selected by the Union as distinguished from the general body of employees, and the management, having declined to recognize the Union, refused to treat with the Union appointees as representatives of the employees. This difficulty will be overcome the moment the employees make the selection.

The Union is not satisfied with this prospect. It insists upon recognition and a written contract. In my judgment, the issue of union recognition taken as the sole question for consideration is not capable of being determined by this Board. The Industrial Disputes Investigation Act makes no provision for arbitration on this subject. The Act permits an arbitration on disputes affecting work done, or to be done, or as to the privileges, rights and duties of employer or employees, wages, hours of employment, sex, age, qualification or status of employees, conditions of employment, the employment of children, the dismissal of or refusal to employ any particular person or persons, the interpretation of an agreement and a number of other matters, none of which is in point in this arbitration.*

The question of union recognition is not referred to as a subject matter of "dispute", nor is it included by inference in any of the subjects referred to. At first blush one might suggest that it is embraced under the heading "privileges". That, however, is quickly disposed of when it is recalled that the privilege of the employees to organize has been recognized and organization has proceeded freely without interference by the company. The Act also recognizes that the employer has privileges. One of these is liberty of contract, that is, the right to say with whom he will make agreements. That right is not taken away by this Act and it is a fair deduction that parliament intended to preserve the liberty of the subject because had it made union recognition the subject matter of a "dispute" it would involve interference with the liberty enjoyed by a free people for centuries past of exercising their own judgment with regard to parties with whom they will make agreements.

I do not suggest that union recognition cannot be considered by a Board constituted under the Act. If there are matters in dispute such as wages, hours of work, conditions of employment, employment of children, or the interpretation of an agreement, and the Board concluded that the only practical way of resolving the dispute was by recognition of a union, it would be justified (as in the case of the Great Lakes Shipping Companies) in so recommending, but when parties agree, as in this instance, that the only question at issue is union recognition, then they admit that

**Editor's Note.*—It is the opinion of the law officers of the Crown that the question of union recognition is a matter affecting the privileges, rights and duties of employers or employees, that a dispute as to union recognition is a "dispute" within the meaning of the Industrial Disputes Investigation Act and that a Board of Conciliation and Investigation can properly be established to deal with a dispute in which the question of union recognition is the sole matter at issue.

there is no dispute capable of being dealt with under the terms of the Act.

Reference has been made to the fact that the submission to this Board states:—

"The primary cause of this dispute is the refusal of the company to recognize and deal with . . . the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers as the agency representing their employees."

It has been argued that the Minister having constituted the Board, it is bound by his decision and must proceed to determine the question of union recognition. It is true that these words appear in the submission, but they are the words used by the Union in its application for the appointment of a Board. These words alone would not justify the Minister in appointing the Board. The further statement by the Union in its application that "there are other miscellaneous matters . . . including general conditions around the plant and townsite which are a current cause of dispute" did justify the appointment of the Board. The Board having heard no evidence of a dispute regarding "general conditions around the plant and townsite" is obliged, in my opinion, to conclude that there is no dispute before it.

I have not overlooked the provision of Section 7 of the statute to the effect that the decision of the Minister as to the granting of a Board is final and when granted shall be deemed to be authorized in accordance with the provisions of the Act. I have no doubt that the Board is properly authorized and constituted. I do not suggest that the Minister was in error in granting it. He was justified in so doing by the allegation that conditions around the plant were a current cause of dispute.

The action of the Minister in constituting the Board has not given it power to determine a dispute other than those recited in Section 2(*d*) of the Act. He has no power to do so. He is obliged to obey the law as is His Majesty's most humble subject. He cannot add to or detract from his powers. The fact that the proceedings of the Board are not subject to challenge and cannot be reviewed by a Court accentuates the duty and obligation of the Board to act within the powers given it by Parliament.

Even assuming that the Board has power to consider the question of union recognition as the sole question of dispute, I would refuse the application because I believe that no person should be obliged to enter into a contract against his will unless the law requires him to do so. Parliament has refrained from requiring employers and employees to enter into written agreements or to contract regarding the subject matters dealt with by the Act. If union recognition is justified in this particular case, involving as it does the sole issue between the parties, it becomes impossible to conceive of a case in which it should be refused. The question as to whether union recognition should be granted whenever demanded is a question of policy to be determined by Parliament.

The only effective method of improving conditions at Port Mellon in my opinion is to create and develop a spirit of co-operation and mutual goodwill between employer and employees. There are conditions which require improvement. They were observed by the Board and are admitted by the Company. These improvements can be expedited and should be expedited. I am strongly of opinion, however, that the desired results will not come through a recommendation of this Board which is in effect compulsion and interference with liberties enjoyed by free men generally.

It should be noted that compulsion and interference is not confined to the Company. It will extend to the employee as well. For example, the agreement submitted by the Union to the Company contains the following clause:

"Any employee who is now a member in good standing or who becomes or is reinstated as a member of the Signatory Union shall as a condition of continued employment maintain such membership in good standing throughout the term of this Agreement, subject to such procedure as may be mutually satisfactory to the International President of the Signatory Union and the Resident Manager."

True, the Chairman and Mr. Bengough do not recommend inclusion of that clause in the initial contract. It is obvious, however, that such a clause will be the constant aim of the Union. Without it, and with wages and hours of work beyond the control of the parties, it is difficult to visualize what is left as the possible subject matter of a written agreement.

In the light of this, I am doubly convinced that the employer will be well advised to meet the representatives selected by the employees on all reasonable occasions and that the interests of the employees will be best served by dropping the idea of compulsion in securing a signed agreement, the adoption of a co-operative spirit and the selection of the best possible representatives to conduct their negotiations.

(Sgd.) J. A. Clark.

Vancouver, B.C.,
May 15, 1942.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

REPORTS have been received of six cases heard recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, March, 1941, page 236, and in previous issues, and the seventh report of the proceedings of the Board covering the period from October 1, 1936, to September 30, 1939, was recently issued as Bulletin No. 14 in the Industrial Relations Series published by the Department of Labour.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war of 1914-18. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: The Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 495—Canadian Pacific Railway (Western Lines) and the Brotherhood of Railroad Trainmen.—This case dealt with the claim of a trainman for time lost on account of being held out of service following the investigation of an alleged infraction of General Train and Interlocking Rule 104 which provides that: "Except where switch tenders are stationed, conductors are responsible for the position of all switches used by them and their trainmen. This will not relieve trainmen of responsibility for the proper position of switches used by their train."

The employees contended that under the rule "conductors are responsible for the position of the switches used by them, and their trainmen; the rule further provides that this will not relieve trainmen of their responsibility for the proper position of switches used by their train, which in this particular case we contend the head-end trainman was responsible for, and under the rule, the first sentence is mandatory so far as the conductor is concerned; he is being paid a higher rate of pay to supervise all switching, to see that all cars set out at intermediate points are properly secured, derails replaced, and all switches lined for their normal positions, therefore it was his duty as conductor to check the position of the switch used by his head-end trainman, especially in this case where the switching was performed 50 car-lengths away from the switch used by one of his trainmen."

The employees further claim that "in this particular case the conductor and the trainman were not responsible for the head-end trainman leaving the switch open, or for it being run through; that responsibility rests with the head-end trainman and the engine crew; we do, however, admit the conductor, under Rule 104, was the man responsible for checking the position of that switch when passing over it in pulling out of the yard, for which the conductor was given thirty (30) demerit marks.

"We also contend the rule does not provide or contemplate dividing the responsibility of the conductor with the rear-end trainman on a 30-20 basis in the case described."

The employees further contended that the trainman was held off and caused to lose time unnecessarily, "which is not in keeping with the note under Article 10 of the Trainmen's Schedule."

The Company claimed that the literal application of Rule 104 in connection with the Innisfail occurrence in so far as the claimant trainman was concerned required him to observe and check the position of the switch as his train passed over it. The Company quoted from the investigation evidence to the effect that the trainman stated that he did not look south after taking up his position and that he could not say how the north switch at Innisfail was lined or "what position the target was in."

Representatives of the parties appeared before the Board and presented additional evidence and information orally.

The Board's decision was that the circumstances in the case did not warrant the claimant trainman being held off-duty with a consequent loss of 307 miles, and sustained the claim of the employees to the extent of the payment to the trainman for the time lost.

Case No. 496—The Canadian National Railways (Atlantic Region) and the Order of Railroad Telegrapers.— Controversy re-

specting the appointment of a Ticket Clerk at Sussex, N.B.

On December 6, 1940, it was necessary to create a new position of Ticket Clerk working under the supervision of the Agent at Sussex, N.B., and an employee carried on the seniority list of an organization other than the Order of Railroda Telegraphers was assigned to the position.

The employees contended that in accordance with the provisions of the Schedule of Rules and Wages for Telegraphers and Assistants, Atlantic and Central Regions, effective September 1, 1927, this position should have been filled by an employee from the seniority list of the Telegraphers, Moncton Division.

The Company contended that the schedule agreement had not been violated and that it was the company's privilege in the case concerned to appoint a man belonging to the Clerks and Other Classes of Employees seniority group as the work to be performed at Sussex was similar to that carried out in the same capacity at many other stations.

Oral evidence was presented to the Board by both parties to the dispute in support of their respective contentions.

The Board's decision sustained the employees' contention.

Case No. 497—The Canadian Pacific Railway (Western Lines) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.—Controversy with regard to the application of Article 6, Clause (*c*) of the Conductors' and Trainmen's Schedule relative to the tonnage handled eastbound from Field, B.C.

In the joint statement of facts it was shown that unassigned crews are required to handle tonnage Field to Lake Louise which is a helper district, in excess of the tonnage one single engine of the same class can bring to the foot of the grade.

The employees contended that the general application of Article 6, and the letter and example embodied in the Schedule under date of October 3, 1913, had been violated out of Field, B.C.

The Company contended that the tonnage handled by a locomotive eastbound into Field from the British Columbia District does not in any way govern the tonnage that can or should be handled east on the Laggan Subdivision; that Article 6, and the letter and example under date of October 3, 1913, apply to intermediate points on a Subdivision to trains en route, and not to trains leaving a terminal; and that the Company has the right to handle with assisting engines the tonnage the road engine can handle eastbound from Stephen over the Laggan Subdivision.

In the Board's decision, the claim of the employees was not sustained.

Case No. 498—Canadian National Railways (Western Region) and the Order of Railway Conductors and The Brotherhood of Railroad Trainmen.—This case concerned the claim of a conductor and crew for minimum day in through freight service, in addition to miles made in unassigned work train service.

The mileage claimed by the crew following a service out of Hanna to Munson and return, was reduced 53 miles because of payment on the basis of through freight rates and conditions for the entire trip, with work en route, the difference being due to only actual mileage paid on the return movement Munson to Hanna, 41·1 miles and 6 miles preparatory time allowed which was not claimed by the crew. The employees contended that a minimum day in through freight service should be allowed, in addition to mileage and/or hours made in unassigned work train service, in accordance with schedule provisions.

The Railways claimed that where an unassigned crew ordered for a work extra is called upon to handle revenue loads in addition to performing work service they have claimed, it has been the practice to pay for such service on the basis of through freight rates and conditions for the entire trip, with work en route.

Representatives of the Railways and employees appeared before the Board and presented additional oral evidence in support of their respective contentions.

The Board sustained the claim of the employees.

Case 499—Canadian National Railways (Western Region) and The Order of Railway Conductors and the Brotherhood of Railroad Trainmen.—Controversy regarding application of Article 5, Conductors' Schedule, and Article 5, Rule 6 Trainmen's Schedule—"Deadheading".

In this case, the employees stated that the crew deadheading submitted a deadhead ticket covering miles made by working crew, except preparatory time and time at final destination terminal. Claim was reduced from 161 to 131 miles. Time deducted from deadhead crew was earned and paid working crew account being used in switching service at Saskatoon Terminal, an intermediate terminal for crews employed on the Asquith Subdivision.

The employees contended that the exceptions mentioned in the ruling following Article 5, Rule 5, Conductors' Schedule, and Article 5, Rule 6, Trainmen's Schedule, are not applicable in this instance, as they specifically refer to initial and final terminal payments. It was therefore claimed that any time or miles earned or paid working crew after time set for departure of train on which the deadhead crew are to travel, until arrival

at final destination, should be paid crew deadheading.

The Railways contended that Schedule Rules do not provide for switching, or work en route, accruing to the deadhead crew, where any such payments are earned by the working crew, and it was therefore requested that the claim be declined.

The Board's decision sustained the claim of the employees.

Case No. 500—Canadian National Railways (Western Region) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.—This case dealt with the controversy respecting payment to a conductor of a minimum day or 100 miles for "deadheading".

On October 9, 1941, the claimant conductor "deadheaded" on a passenger train from Melfort to Prince Albert, returning from relieving an assigned way freight conductor who was unfit for duty, for which trip he claimed 100 miles at passenger rate. He was paid 62 miles at passenger rate, this being the actual mileage from Melfort to Prince Albert.

The employees contended that the Company calling a conductor or trainman to "deadhead" is requiring service and the employee should be paid on the basis of a minimum day or 100 miles.

The Railways claimed that deadheading should be paid on the basis of actual miles travelled, regardless of whether or not the deadheading is coupled with service performed the same day or less than 100 miles. The Company further pointed out that the conductor was paid on this basis and therefore requested that the employees claim be denied.

The Board's decision denied the claim of the employees.

Survey of Conditions in New York State Laundries following Minimum Wage Order

The Division of Women in Industry and Minimum Wage of the New York Department of Labor has recently made a study of the operation of the 1938 minimum wage order covering laundries in the State. The investigation revealed that hours in the industry have been regularized and that there has been an upward trend in wages for all types of laundry workers since the order was made. This trend was particularly significant because it was contrary to the current trend of wages in many other industries employing a substantial number of women. The report points out that "the fear that the minimum wage might tend to become the maximum has not materialized."

The significant feature of the laundry order was not the setting of a minimum hourly rate of 35 cents in cities with a population over 18,000, but the provision that a minimum weekly wage of $14 must be paid to all persons who worked 40 hours or less. Payment at the rate of time and one-half for hours over 45 a week was also required. The effect of these provisions was to stabilize the work-week of laundry workers.

> In establishments where long hours had previously been the custom, adjustment was most frequently made by reducing the hours of the women workers so as to avoid the payment of overtime rates. In some instances, this arrangement made it necessary for the laundry to hire additional workers. In establishments where women had not been given a full week of employment prior to the Order, the adjustment most commonly followed was the shifting of workers from one occupation to another, thereby increasing the number of hours worked.

It was also found necessary to educate the public away from the traditional idea that Monday was washday and thus spread the work over the whole week. On the subject of hours the report concluded that "the Order....resulted in an increase in the proportion of women whose working hours averaged between 40 and 45 per week and a decline in the proportion of women with excessively short and excessively long hours." Moreover there was the additional advantage of increased efficiency in running the plant regularly instead of intermittently.

The effect of the Order on earnings was also significant.

> The study showed that in 1937-38 the "average" woman earned $13.98 a week . . . . In 1939-40 her average earnings amounted to $15.15, an increase of 8 per cent. . . . Both the women with low earnings and those whose earnings were relatively high had more money in their pay envelopes following the promulgation of the Order.

Average annual earnings also increased from $726.87 in 1937-38 to $787.42 in 1939-40. The report stressed the fact that "not only were the women in each size and type of laundry in the lower income brackets favourably affected by the order, but the women in these laundries who were receiving more than the minimum wage also received an increase." This point was illustrated by an analysis of the increase in earnings for each occupation in the laundry industry. All demonstrated the upward trend, but it was less pronounced for the two highest paid occupations—supervisor and mender.

The Order "resulted in greater employment for the regular women workers" but there was a "slight decrease in the number of workers employed in the industry."

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1942

THE following table shows the number of disputes, workers involved and time loss for May, 1942, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*May, 1942	32	6,904	18,047
*April, 1942	17	6,838	20,403
May, 1941	34	5,975	22,397

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While there was a considerable increase in the number of disputes during May over the preceding month, the increase in the number of workers involved was slight and there was an appreciable decrease in time loss, many of the strikes being terminated in a short time. The important disputes involved coal miners at Florence and Sydney Mines, N.S., meat packing workers at Kitchener, Ont., and bank clerks at Montreal, P.Q. In April the important disputes involved coal miners at Florence and Joggins, N.S., machinists at Trenton, N.S., and bakers at Montreal, P.Q.

In May, 1941, most of the time loss was due to strikes of steel rolling mill workers at Montreal, P.Q., metal products factory workers at Toronto, Ont., and coal miners at Sydney Mines, N.S., and Minto, N.B.

Four disputes, involving 936 workers, were carried over from April and 28 commenced during May. Of these 32 disputes 27 were terminated during the month. Six resulted in favour of the employer, five in favour of the workers, two in compromise settlements, while 14 were indefinite. At the end of the month, therefore, there were five strikes or lockouts reported as in progress, namely: beverage plant workers, Toronto, Ont., meat packing workers, Kitchener, Ont., paper mill workers, Mont Rolland, P.Q., steel factory workers, Windsor, Ont., and plumbers and steamfitters, Kitchener, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to three disputes of this nature, namely: truck drivers and helpers, Toronto, Ont., Oct. 7, 1941, to Dec. 31, 1941, one employer; biscuit and candy workers, Vancouver, B.C., March 10, 1942, to April 14, 1942, one employer; bakers, etc., Montreal, P.Q., March 8, 1942, to April 15, 1942, 11 employers.

A minor dispute involved nine employees in a meat packing plant at Winnipeg in a stoppage of work for two hours on May 2, when a foreman resigned owing to an altercation over a vote as to union recognition. Work was resumed when the foreman was re-engaged.

A minor dispute involved six shipping pier workers for coal mines at North Sydney for six hours on May 7, the men having demanded the employment of two additional workers. The mines being on strike the shipping crew was reduced.

A minor dispute involved 18 truck drivers on a construction job at Shelburne, N.S., on May 13, to obtain an increase in wages. Work was resumed after about three hours, the increase being refused.

A dispute as to an increase in wages on May 27 involved eight labourers in an abrasive manufacturing plant at Niagara Falls, Ont.

A dispute as to hours is reported to have caused a cessation of work by six planers in a metal factory at Montreal on May 19. Complete reports have not been received.

A cessation of work by a number of machinists, pipe fitters, etc., at a shipyard in Quebec, P.Q., on May 26 has been reported but particulars have not been received. The cause appears to have been a proposed change in the work. The men resumed work in a short time.

Disputes in Progress Prior to May

COAL MINERS, INVERSIDE, N.S.—This strike on April 24, at a new mine being developed, was in protest against a delay in completing the wash house, owing to bad weather and waiting for materials. The miners refused to work until it was completed but when arrangements were made to proceed with its construction they resumed work on May 6.

COAL MINERS, FLORENCE, N.S.—This strike, the second against the suspension for six days of eight miners who had left work be-

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress prior to May, 1942				
MINING—				
Coal miners, Inverside, N.S.	1	25	125	Commenced April 24, 1942; against delay in completion of wash house; terminated May 6; negotiations; compromise.
Coal miners, Florence, N.S.	1	727	5,800	Commenced April 29, 1942; against suspension of workers; terminated May 9; return of workers pending settlement; indefinite.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Knitting mill workers, Toronto, Ont.	1	*(a)* 19	150	Commenced April 29, 1942; for increased wages; terminated May 9; conciliation (provincial) and return of workers; wage scale to be referred to Regional War Labour Board; indefinite.
FINANCE—				
Bank clerks, Montreal, P.Q.	1	107-224	1,000	Commenced April 30, 1942; for union recognition and increased wages; terminated May 23; return of workers; in favour of employer.
(b) Strikes and Lockouts commencing during May, 1942				
MINING—				
Coal miners, Sydney Mines, N.S.	1	780	1,560	Commenced May 8; *re* payment for loading after mechanical breakdown; terminated May 9; negotiations and return of workers pending reference to Adjustment Board; indefinite.
Coal miners (winch boys), South Wellington, B.C.	1	*(b)* 14	20	Commenced May 18; for increased wages; terminated May 19; return of workers pending reference to National War Labour Board; indefinite.
Coal miners, Nanaimo, B.C.	1	150	200	Commenced May 20; for increased wages; terminated May 21; return of workers pending reference to National War Labour Board; indefinite.
Coal miners, Princeton, B.C.	1	12	24	Commenced May 18; for wages and cost of living bonus as in neighbouring mine; terminated May 20; wage scale to be referred to National War Labour Board; in favour of workers.
Quarry workers, Broughton Station, P.Q.	1	47	120	Commenced May 18; for increased wages; terminated May 20; (conciliation, federal); work resumed pending reference to National War Labour Board; indefinite.
MANUFACTURING—				
Tobacco and Liquors—				
Beverage plant workers, Toronto, Ont.	1	80	120	Commenced May 29; against dismissal of certain workers; unterminated.
Animal Foods—				
Meat packing workers, Kitchener, Ont.	1	200	3,600	Commenced May 11; against dismissal of two workers; unterminated.
Fish cannery workers, Black's Harbour, N.B.	1	75	75	Commenced May 14; for increased wages; terminated May 14; negotiations and return of workers pending eference to Regional War Labour Board; indefinite.
Textiles, Clothing, etc.—				
Cotton factory workers, Cornwall, Ont.	1	56	28	Commenced May 13; *re* seniority right in promotion; terminated May 13; negotiations and return of workers; compromise.
Cotton factory workers, Cornwall, Ont.	1	21	21	Commenced May 19; *re* transfer of employee and seniority; terminated May 19; conciliation (federal); in favour of employer.

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for annual review.

† In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 150 indirectly involved. *(b)* 310 indirectly involved.

fore the completion of the shift, was terminated when the miners resumed work on May 11, the suspended miners being reinstated on May 18. The district executive appealed the suspension to the Miners' Adjustment Board in accordance with the agreement in effect, to obtain payment for the period of suspension. The two strikes had closed down the mine since April 20, except for April 28.

BANK EMPLOYEES, MONTREAL, P. Q.—A strike of employees in 17 branches of one bank in Montreal, including clerks, stenographers, messengers, etc., began on April 30, to secure recognition of a local of the Office and Professional Workers' Organizing Committee and an increase in salaries. It was stated that an application for the increase had been made in December, 1941, to the Regional War Labour Board, on the ground that the salary scale was lower than in other banks but no decision had been rendered; also that there had been discrimination against union employees. The union reported that the strike involved 200 males and 24 females. The bank stated to the press that only 107 were absent on the second day of the strike and after that employees began to return to work. On April 29, under an arrangement made through the federal Department of Labour the general manager of the bank had discussed the situation with the Secretary of the Canadian Congress of Labour, with which the union is affiliated. On May 7 a committee of the union met the Regional War Labour Board to support their application for an increase in salary and for the cost of living bonus paid by other banks. On May 15 it was reported that all but 39 had returned to work and later that these had received notice of dismissal. On May 23 the strike was declared off by the union.

Disputes Commencing During May

COAL MINERS, PRINCETON, B. C.—Employees in one mine ceased work on May 18 to secure wages with cost of living bonus equal to those paid in a neighboring mine. The mine had recently completed the development stage and an application for the bonus had previously been made by the employing company to the National War Labour Board. A cost of living bonus was approved to cover the increase in the cost of living during the period of development. When the employer again applied, the mine having reached the production stage, the Board approved the same wage scale and cost of living bonus as in the neighboring mine. On March 9, a board under the Industrial Disputes Investigation Act had been established to deal with a dispute as to recognition of the United Mine Workers of America (LABOUR GAZETTE, April 1942, pp. 391-392), following a reference of the dispute to the western representative of the Department as an Industrial Disputes Inquiry Commissioner. Following sittings of the Board negotiations for an agreement as to wages and working conditions were entered into, the wage scale to be subject to the approval of the National War Labour Board.

MEAT PACKING WORKERS, KITCHENER, ONT.—A number of employees in one establishment

ceased work on the afternoon of May 11 in protest against the dismissal of two employees, the employer refusing to discuss the case with the employees' committee. On the recommendation of a conciliation officer of the Department of Labour the employees, members of the Packing House Workers' Organizing Committee, voted to resume work on the following day, the dispute to be taken up with a committee of the city council. When the employees reported for work on the next morning the plant was closed and at the meeting in the afternoon with the civic committee a settlement was not reached, the management refusing the union's proposal for arbitration. As the plant was closed the strikers alleged they were locked out and the plant was picketed. The Minister of Labour for Ontario, the Honourable Peter Heenan, took up the dispute with the management but a settlement was not reached. Owing to interference with truck loads of meat one man was charged with malicious damage and taking a car without the permission of the owner. The company announced that the plant would be reopened as soon as possible after the interruption and the employees would be notified to return as required. By May 18 it was reported that 100 had resumed work. On May 15 a delegation of employees with the Mayor of Kitchener interviewed the Minister of Labour and requested the appointment of a board of arbitration. On May 19 it was reported that a striker had been charged with disorderly conduct for throwing eggs. On May 27 in court this was dismissed and the other charge mentioned above was withdrawn. Toward the end of the month the union requested the federal government to take over the plant and appoint a controller.

Fish Cannery Workers, Black's Harbour, N.B.—Employees requested an increase in wages and the management agreed to take it up with the Regional War Labour Board. A small number of employees, however, ceased work for a day, but returned on being assured as to the proposals made.

Cotton Factory Workers, Cornwall, Ont.—A small number of employees in one department ceased work on May 13 owing to a dispute as to the seniority of an employee promoted. The local union president succeeded in bringing about a resumption of work after one-half day, it being agreed that seniority would be determined according to company records but that the two in dispute would be employed at the same remuneration. On May 19 a small number of workers in another department ceased work owing to a dispute as to the seniority of two men in re-arranging work. Work was resumed next day, pending conciliation by the Labour Department. The ruling of the management was accepted.

Paper Mill Workers, Mont Rolland, P.Q.—Employees on one shift in a paper mill ceased work at 9 p.m. on Saturday, May 30, instead of at midnight, owing to a dispute as to overtime and to obtain recognition of the International Union of Paper Makers. On March 25 an application for a board under the Industrial Disputes Investigation Act had been made and an Industrial Disputes Inquiry Commissioner was appointed on April 2, with a view to bringing about negotiations for the settlement of the dispute as to union recognition and an agreement. On June 1 a strike occurred in another plant of the Company, at St. Jerome, but an agreement between the company and the union was reached on June 5.

Plywood Factory Workers, Vancouver, B.C.—A stoppage of work for one hour on April 17, reported in the Labour Gazette for May, was followed by similar short stoppages of one-half hour in the morning and one hour in the afternoon of May 4, to hold meetings of the employees in protest against the cancellation of the third shift, thereby laying off about 200 men. The management had for some years dealt with an employees' conference committee and in April it was arranged that an application for a cost of living bonus would be made to the Regional War Labour Board. When the third shift was cancelled, owing to shortage of logs, a large number of the employees are reported to have joined a local of the International Woodworkers of America and demanded the observance of seniority in reducing staff and recognition of the union instead of the employees' committee. The union applied for conciliation under the British Columbia Industrial Conciliation and Arbitration Act. On May 21 it was announced that a vote, taken by a provincial official under the act, showed 327 in favour of representation by the union and 86 against. The total number of employees before the lay-off was 732. On May 15 it was reported that the company was re-employing the senior men laid off.

Plumbers and Steamfitters, Kitchener, Ont.—Six employees in one shop ceased work on May 29, refusing to work with a non-union worker. Work was resumed on June 2, when the non-union worker was dismissed. The union did not sponsor the strike.

Hospital Maids, Hamilton, Ont.—A number of maids in one hospital ceased work on May 15 to secure increases in wages of $5 per month. The civic authorities were unable to agree to this as the money had not been provided in the civic budget, but approval was obtained from the provincial authorities and work was resumed after two days. The work of those on strike was performed by nurses off duty and by women volunteers pending settlement.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March, 1941, issue, in the review of "Strikes and Lockouts in Canada and other Countries, 1940". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in March was 62, and 4 were still in progress from the previous month, making a total of 66 disputes in progress during the month; 15,200 workers were involved in the disputes in progress during the month and the time loss was 43,000 working days.

Of the 62 disputes beginning in March, 14 arose out of demands for increased wages and 24 over other wage questions; 5 over working hours; 5 over questions as to the employment of particular classes or persons; 12 over other questions as to working arrangements; and two over questions of trade union principle. Final settlements were reached in 40 disputes, of which 7 were settled in favour of workers, 23 in favour of employers and 10 resulted in compromises; in 21 other disputes work was resumed pending negotiations.

A number of strikes in coal mines occurred during May following demands for increased wages. At May 24, an unofficial survey gave an estimated number of 15,000 coal miners involved in various parts of the country. The chief grievance was that they were being paid less than industrial workers engaged in war production. On May 25, about half the strikers had returned to work pending negotiations.

The Bahamas

Unskilled labourers engaged in construction work at Nassau went on strike June 1, demanding higher wages. Garrison troops were called to restore order on the next day and the 1,500 workers were back at work on June 5.

New Zealand

A strike of meat processing workers at Westfield (Auckland) occurred March 12, over a trade union question. On the following days employees of other similar establishments also went on strike and by March 18, 2,300 were involved. On March 23, 213 strikers were sentenced to one month's imprisonment, but were later released on probation. On March 25, the dispute was settled, the workers to be re-engaged without discrimination.

United States

Preliminary figures show the number of strikes beginning in April as 310, involving 55,000 workers in new strikes. The time loss for all disputes in progress during the month was 375,000 working days.

The number of strikes beginning in the year 1941 (revised figures) was 4,288, involving 2,362,620 workers, with a time loss of 23,047,556 man working days. Half of the number of strikes occurred over questions of union organization, 36 per cent over wages and hours and the remainder over various other questions. Results of strikes show 42 per cent ended with substantial gains to workers, 36 per cent in partial gains or compromises and 15 per cent in little or no gains to workers, the others being in settlement of jurisdictional and rival union disputes or of indeterminate result or result not reported.

A strike of 8,000 elevator operators and apartment house service workers in New York City on May 1, was settled after 13 hours when the wage demands were referred to the National War Labour Board.

The first prosecution under the U.S. Fair Labor Standards Act for the employment of a boy under 18 in an explosives plant resulted in the defendant company agreeing to a judgment enjoining the employment of persons under 18 in its plant. The manufacture of explosives was declared to be a hazardous occupation within the meaning of the Fair Labor Standards Act in May, 1939. The company concerned manufactures incendiary bombs, ground signals and ship signals. After an explosion, it was found that a boy 16 had been employed as a helper in the bomb room of the plant.

"RATIONING" OF MAN-POWER ON PRIORITY BASIS IN CANADA

"Control of Employment Regulations" Established by Order in Council

REVOKING a previous Order in Council —P.C. 2250 (LABOUR GAZETTE, April, 1942, page 421, May, 1942, page 552)—the Government on June 12 issued Order in Council P.C. 5038 which provides for a more effective utilization of labour in the war effort by controlling and directing it through the public employment offices.

The chief effect of the new Order in Council is that while previously the set-up of the National Selective Service program precluded physically fit men of military age from entering certain restricted occupations without a permit, now no person, man or woman, can take a job anywhere without the approval of a Selective Service officer. Exempted from the operation of this Order are employment in agriculture, fishing and hunting, employment subject to the provisions of the Essential Work (Scientific and Technical Personnel) Regulations, employment in domestic service, and employment under the Government of any province.

Statement of Director

The basis and purposes of the Order were contained in a statement issued at a press conference on June 17 by Mr. Elliott M. Little, Director of National Selective Service. This statement is as follows:

"The steadily growing shortage of labour, especially in certain sections of the country, coupled wiith excessive mobility, has made it necessary to set up additional controls over the disposition and movement of our man-power. This new order gives us additional control, with sufficient flexibility to enable us to meet the varying needs of different areas.

"In channelling *all* employment through the Employment Offices of the Unemployment Insurance Commission, we are only extending the procedure prescribed in the original Selective Service Regulations announced on March 24 last. Those original regulations provided that a physically fit man of military age could not enter certain occupations without a permit from a Selective Service Officer.

"Now, we say that no man or woman may take any job anywhere, with a few exceptions, without the approval of a Selective Service officer. It includes executives and messengers. This is not 'freezing' because a man or woman still has the right to seek a job and an employer has the right to seek an employee; but the man or woman can't take a job and the employer can't hire anyone without the approval of the local office. It enables us to *control* the movement of labour and guide it where it can contribute most to winning this fight we're in. We've got to the stage where we must carefully measure out our man-power on a priority basis just as materials have to be rationed.

"The new angle in the order, apart from its broad application, is that employers are now required to notify the employment offices of vacancies *as they occur* and of prospective layoffs or additions required for their staffs, as soon as they can foresee such need arising.

"The Director of National Selective Service was given broad powers by the governor in council in the Control of Employment Regulations 1942. Subject to the advice of the National Selective Service Advisory Board and approval of the Minister of Labour, the Director may issue such orders as we are announcing to-day.

"We, in turn, are passing authority on to the local officers because this whole question of the most efficient distribution of our man-power is primarily a local problem; that is, it must be handled locally but within general lines laid down nationally. While we in Ottawa will lay down general principles, their application and interpretation will be varied within limits by the local officers to meet local conditions. The labour situation in Halifax and Vancouver, for example, is a lot different from that in Winnipeg or Calgary.

"We have a running registration of unemployed males now. With employers obtaining all help through the government employment offices from now on, we will be in a position to piece together demand and supply.

"For the time being, at least, we plan to handle this movement of labour through the Employment Offices, of which there are at the moment 115. More are being opened as the need becomes apparent. The new order also provides that any specified agency may be designated as a local employment office where necessary. We have already so designated the Civil Service Commission and the regional directors of the War Emergency Training Program. This, I suppose, might include employment offices operated by some large emloyers or by some trade unions.

"While this order places a tremendous new load on the Employment Offices, I am confident that the staffs will rise to the new responsibility with the additional help which has been provided during the last three weeks, and which will be provided from time

to time as the need arises. There should be little delay in the handling of applications. The sympathetic co-operation of employers and job seekers will be necessary, especially while the offices are adjusting themselves to the new load."

Text of Order in Council

The following is the text of Order in Council P.C. 5038:

Whereas the Minister of Labour reports that it is essential, for the most effective utilization of labour in the war effort and for the reduction of excessive labour turnover, to provide for the greater use by employers and employees of public employment offices;

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, with the concurrence of the National Selective Service Advisory Board, and under authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, Chapter 13 of the Statutes of Canada, 1940, is pleased to make the following regulations and they are hereby made and established accordingly:—

1. These regulations may be cited as the Control of Employment Regulations, 1942.

2. As used in these regulations, unless the context otherwise requires,

(*a*) "Agriculture" means the production of field crops, fruits, vegetables, honey, poultry, eggs, live stock, milk, butter or cheese;

(*b*) "Employment" means any service as an employee, including employment under the Government of Canada, but not including employment in agriculture, or employment subject to the provisions of the Essential Work (Scientific and Technical Personnel) Regulations, 1942, or employment under the Government of any Province;

(*c*) "Local Office" means a local employment and claims office of the Unemployment Insurance Commission or any other agency designated by the Director of National Selective Service as a local office for the purposes of these regulations.

3. Subject to the approval of the Minister of Labour, the Director of National Selective Service, with the concurrence of the National Selective Service Advisory Board, shall have power to issue orders prescribing that, in respect of all or any class of employees in any locality, industry or occupation, and subject to such conditions, qualifications and exceptions as he deems necessary to carry out the purposes of these regulations, no employer shall take any person into employment except by notifying a local office of the vacancy to be filled and engaging for that vacancy a person referred to him for such vacancy by a local office, or a person whose engagement for such vacancy is approved by a local office. Such orders shall become effective upon publication in the *Canada Gazette*.

4. (1) In any prosecution under these regulations, the complaint shall be made or the information laid within one year from the time when the matter of the complaint or information arose.

(2) Sections sixty-nine and seventy of the Criminal Code shall apply *mutatis mutandis* to the provisions of these regulations.

5. Any person who contravenes or fails to comply with any of the provisions of any order made under authority of these regulations shall be guilty of an offence and liable upon indictment or summary conviction to imprisonment for a term not exceeding twelve months with or without hard labour, or to a fine not exceeding $500 or to both such imprisonment and such fine.

His Excellency in Council, on the same recommendation, is further pleased to revoke and doth hereby revoke Order in Council P.C. 2250 of 21st March, 1942, effective upon publication of the Control of Employment Regulations, 1942, in the *Canada Gazette*.

Text of First Order

The text of the first Order issued under the authority of the Control of Employment Regulations (P.C. 5038) is as follows:

Under authority of the Control of Employment Regulations, 1942 (P.C. 5038 of 12th June, 1942), the Director of National Selective Service, with the concurrence of the National Selective Service Advisory Board and the approval of the Minister of Labour, hereby makes the following order:

1. As used in this order—

(*a*) "Employment" means any service as an employee, including employment under the Government of Canada, but not including

(i) employment in agriculture as defined in the Control of Employment Regulations, 1942, fishing, hunting, or trapping, or

(ii) employment subject to the provisions of the Essential Work (Scientific and Technical Personnel) Regulations, 1942, or

(iii) employment directly by the Crown in the right of any province, or

(iv) employment in domestic service in a private home, or

(v) employment of students for work to be done after attendance at day classes or on holidays during the school or college term but not during the long summer vacation, or

(vi) part-time subsidiary employment which is not the employee's principal means of livelihood, or

(vii) casual or irregular employment for not more than three days in any calendar week for the same employer.

(*b*) "Local office" means an Employment and Claims Office of the Unemployment Insurance Commission or any other agency designated by the Director of National Selective Service as a local office for the purposes of this order.

2. (1) Except as otherwise herein provided, no employer shall take any person into employment except by notifying a local office of the vacancy to be filled and engaging for that vacancy either a person referred to him for such vacancy by a local office or a person whose engagement for such vacancy is approved by a local office.

(2) Whenever an employer learns that he requires or will require to engage any additional employees or to lay off any employees, he shall forthwith notify such vacancies or layoffs to a local office.

(3) Any employer who has notified a local office of a vacancy to be filled may apply to the National Selective Service Officer in such office for approval of the engagement for that vacancy of a person other than one referred to him by such office. Subject to such instructions as the Director of National Selective Service may from time to time issue, such National Selective Service Officer may give or refuse such approval after taking into consideration whether such person is able and available to fill any other known vacancy in which his services might be more essential for the maintenance or increase of the production of munitions of war or other essential supplies.

(4) A National Selective Service Officer, upon not less than ten days' notice, may at any time revoke any approval granted by him.

3. If a National Selective Service Officer refuses or revokes his approval of the engagement of any person by an employer, such person or such employer or the representative of any interested trade union or similar organization may, within ten days of such refusal or notice of such revocation, appeal therefrom by notice in writing to the Divisional Registrar of the Administrative Division in which such person would have been or was employed by such employer, and the National War Services Board for such Administrative Division or part thereof in which such person would have been or was so employed shall forthwith hear and determine such appeal and such decision shall be final and conclusive.

4. The provisions of section 2 hereof shall not apply to the re-employment of any person by an employer—

(*a*) within a period of not more than fourteen consecutive days immediately following the day on which he was last employed by that employer, or

(*b*) immediately following the end of a period of sickness or disability, if his employment with that employear was terminated by reason of such sickness or disability, or

(*c*) on his resumption of work on the termination of any stoppage of work by reason of an industrial dispute, or

(*d*) in accordance with the terms of a collective labour agreement which provides preference in employment and re-employment according to length of service or seniority, or

(*e*) upon such employee's reinstatement pursuant to the provisions of Order in Council P.C. 4758 of 27th June, 1941, or any Act of Parliament after the termination of his service in His Majesty's Forces.

Dated at Ottawa this sixteenth day of June, nineteen hundred and forty-two.

Approved:

(Signed) Humphrey Mitchell,
Minister of Labour.

(Signed) E. M. Little,
Director of National Selective Service

STATEMENT OF MINISTER OF LABOUR ON SITUATION IN PACIFIC COAST SHIPYARDS

ON June 16, the Honourable Humphrey Mitchell, Minister of Labour, stated that the seven-day week plan for continuous production of ships in Pacific Coast yards was already proving its worth, and he was resolved that the plan should be brought into full operation. The Minister visited the Pacific Coast in March and discussed the features of his plan with the different shipyard managements and with the union representatives in all the yards. He left the Coast with the understanding that his proposal was likely to be accepted by all parties and he was later advised that it had been endorsed by the shipyard operators and that nine of the eleven unions affected had accepted. These nine unions which subsequently signed agreements supplementary to existing agreements for adoption of the plan represented 96 per cent of the shipyard employees on the Coast. Two unions, the machinists and blacksmiths, with less than 1,000 members, declined to accept.

In his statement, Mr. Mitchell pointed out that he had made every effort to induce the machinists to sign a supplementary agreement so that the plan would be effective in every department of the yards. Despite the Minister's efforts and appeals from their international officers this union has stood in the way of an all-out application of the plan, the statement declared. A movement for the substitution of an alternative scheme has developed.

The Minister said that he had examined the results of the operations of the yards under his proposal and found that even without the co-operation of the machinists and blacksmiths very substantial increases in production had been achieved. In the month of May as compared with April there were increases of 19 per cent in the number of men employed; 20 per cent in the number of rivets driven and 21 per cent in the tonnage of steel plate consumed. Had the machinists and blacksmiths shared in the effort, the Minister pointed out, no doubt the measure of progress would have been considerably greater. It was patent, he said, that seven days' operation would produce more ships than the 6-day week some groups were now considering and that he planned to take the managements and unions that had signed the supplementary agreements at their word and proceed with the enforcement of the plan throughout the yards.

In favour of the 6-day week now being considered in some quarters it has been said that shortage of materials, lack of an adequate supply of skilled workers and supervisors made

the seven-day-week plan impracticable. The Minister stated that he had conferred with several of his colleagues and with the Director of National Selective Service and wished to assure all concerned that such difficulties would not be allowed to stand in the way. "With the Japanese attacks on Alaska and further evidence that the war is approaching nearer to our West Coast, the needs of the shipyards are paramount," Mr. Mitchell said. "Men and materials will be secured even at the expense of production in other industries."

"While the Japanese are attempting to establish bases in Alaska and to cripple our west coast and will work seven days a week to gain their objective, while the United States Government is working on the Alaska Highway seven days a week and ancillary roads, pipe lines and port facilities in British Columbia are being rushed to completion to meet the Japanese menace, while this tremendous effort is seriously hampered by the lack of transportation, can any Canadian be satisfied with anything less than a seven-day week in the shipyards of British Columbia?

"Make no mistake about it, Japan's invasion of the Aleutian Islands is undertaken to provide advance striking bases. The eventual objective is to bomb Pacific Coast cities, shipyards and airplane factories.

"Right now, the Japs are less than eight hours bomber distance from British Columbia ports. They will try to work steadily closer.

"Defence of Alaska depends on ships—cargo ships. Transportation is the greatest single problem faced in building the Alaskan defences that stand between the people of British Columbia, their families, their homes and the utterly ruthless Japanese. The United States Government is racing against time to build in Alaska this year the great defence system that was originally planned for completion in 1946.

"It is ships that will decide whether or not history will say of Alaska's and British Columbia's defence, 'Too little and too late!'

"The rise in production already recorded under the plan of continuous production is not theory. It is real and measurable. It will be more when all trades are working on the maximum production plan. It cannot be maintained on a six-day week basis.

"With the Japanese at our very doors on the West Coast, can we possibly think of closing down our shipyards twenty-four hours each week?

"If we cut our working week by one day, it means we will build fifteen or sixteen fewer ships a year than if we work the seventh day.

"Remember this: One of those extra ships may carry the bombs and supplies to Alaska that will keep the Japs from bombing British Columbia homes, and killing or maiming our people, among them the wives and children of shipyard workers. Should they for a moment consider depriving the people of the Pacific Coast and their own families of this production and this protection?

"There is actually no alternative than to use every available hour and every day in the week. France fell because she failed to work and fight. In this hour when our very lives are menaced, will we be guilty of the same fatal folly?"

The Minister concluded: "There can only be one answer—the shipyards must operate every day of the week so long as this emergency exists."

Mr. Mitchell said he expected that on the following Sunday all British Columbia shipyard employees who were scheduled to work on that day would be at their stations.

Lighting in British War Factories

By the Factories (Standards of Lighting) Regulations issued on February 1, 1941, under the Factory Act, 1937, special standards of lighting are required in factories in Great Britain where persons are regularly employed for more than 48 hours per week or are working on shifts. The Act itself provides that effective provision must be made for securing and maintaining sufficient lighting in every part of a factory where people are working or passing. The Regulations require a minimum illumination of six-foot candles at three feet above floor level where work is being done and one-half-foot candle at floor level where people pass. (A foot candle is the illumination at a point one foot away from a standard candle.) For special work more light may be needed, 15 to 25 candle-power being recommended for fine machine work. Steps should also be taken to prevent the formation of shadows.

These Regulations were based on the recommendations made in a report presented in August, 1940, to the Minister of Labour and National Service by a Departmental Committee on Lighting in Factories. The Committee found that two main features characterize industrial work in war factories. First, heavy strain is imposed on the worker because of the high pressure at which work is done and second, since night work has increased greatly, the time spent under artificial light is much longer than usual even in factories which provide adequate natural light. No precise evidence was found to show that continuous work under artificial light has had effects on health or safety, but the prevalence of such conditions was felt to justify the maintenance of a higher standard of illumination than had been recommended by the Committee in earlier reports.

PRICE CONTROL IN CANADA DURING MAY, 1942

Rationing—Conservation and Distribution of Supplies—Economies—Local Price Schedules Issued

DURING May the Wartime Prices and Trade Board cut the sugar ration and rationed tea and coffee; adjusted many industries, notably in the metals field, to the stringent supply situations caused by the war; promoted economies in other industries to get as large a quantity of civilian goods as possible out of labour and materials left over after essential war needs were met; and dealt with some very difficult price problems.

Rationing

Of all the activities of the Board in the month of May, those which most closely affected the largest number of persons were the ration orders.

Because sugar, tea and coffee are imports and must be brought across the seas at great risk to merchant shipping and seamen's lives, and also because every inch of available shipping space is needed for more essential commodities, it was agreed that supplies of sugar, tea and coffee already in the country must be made to last as long as possible.

Sugar.—Sugar was already on an honour ration basis which allowed three-quarters of a pound per person per week. The main feature of the May order was to cut this amount to half a pound. The former sugar order was revoked and the new order, amending and clarifying it, contained, besides the provision for cutting the ration amount, the following regulations:—

Household consumers may buy sugar only when they have less than two weeks' supply on hand and they may buy only two weeks' supply at any one time. Householders remote from retail stores are not bound by this buying provision but must consume whatever they have on hand only at the ration rate.

Householders wishing to make jams or jellies may have an extra supply equal to three-quarters of a pound of sugar per pound of fruit purchased for this purpose. For home-canning they may have half a pound of sugar per pound of fruit. No extra sugar is allowed for curing or preserving meats.

A boarding house must not buy and use sugar in excess of the quantity and rate indicated by the total ration of persons living in the house.

Notice was given that, effective July 1, industrial users of sugar, who by a previous order were rationed to 80 per cent of their 1941 consumption, will be cut to 70 per cent. The Sugar Administrator was, however, given power to make special supplies of sugar available for industrial preserving of fruits and vegetables produced in Canada.

By a special provision 42 per cent of the weight of sweetened condensed milk is to be taken as sugar in computing industrial sugar consumption. Other special provisions cover export of sugar products, exempting exports to Empire countries.

In hotels and restaurants no sugar is to be served unless asked for by the customer; no sugar container is to be left on a table; no sugar shakers are to be used; no more than three lumps or two teaspoons are to be served with a beverage and no more than two teaspoons with a serving of food.

As this article goes to print the sugar ration is being put on a coupon basis, partly to ensure complete fairness in distribution of a commodity so widely used, but more as a precautionary measure so that the Board will have rationing machinery set up and functioning, ready for any emergency which the uncertainties of war may bring.

Tea and Coffee.—The tea and coffee ration was initiated on the honour system and to date there are no plans for changing this method.

Householders are asked to use only half as much tea and three-quarters as much coffee as they have used in the past. They may buy tea or coffee only when they have less than two weeks' ration on hand and they may buy only two weeks' ration at any one time. As in the case of sugar, the buying provision does not apply in remote areas but the ration does.

Operators of establishments may have one month's supply on hand but must cut customer's allowance to one tea bag—of not more than 60 grains avoirdupois—and one cup of coffee per serving. Restaurants accustomed to serve extra free cups of tea and coffee may discontinue the practice without decreasing the cost of the meal.

In the absence of evidence to the contrary, normal consumption is taken to be two ounces of tea and twelve ounces of coffee per person per week and a household is taken to comprise not more than four persons.

Supply

Metal.—The urgent need for metal for war purposes was reflected in no less than nine of the orders issued during May by the Metals Administration.

The supply and distribution of steel drums was regulated due to military need for steel. Manufacture of metal Venetian blinds was discontinued. Use of copper and brass for plumbing fixtures was limited to a definite list of essential items. The nation's supply of Britannia metal was brought under control in an order requiring anyone possessing a stock of it to report his inventory to the Board. The same order forbade buying and selling the metal except with written permission from the Administrator. Use of tinplate was forbidden in packing certain sea foods; and use of any metal was prohibited for packaging sweet syrups, molasses, cooking oils or salad oils except in two specified large sizes. To get the last ounce of value out of available farm machinery and ensure that none will be tied up idle, exhibiting it at fairs was forbidden.

Textiles.—The scarcity of coarse textiles such as jute, formerly imported, was reflected in an order designed to conserve available supplies by regulating the size of containers for certain cereals. The order covered not only burlap and jute but their substitutes, cotton and kraft and coated paper.

Paper and Paper Products.—This need for substitutes and consequent inroad upon paper supplies was evidenced in four orders for conservation of paper and paper products. Wartime Salvage Limited was given central control over the collecting, grading, inspection, buying, distributing and processing of all waste paper. It was realized that a good deal of paper goes into floor and counter bins whose sole value is the aid they give to merchandizing. With supplies low and buying power high merchandizing is of course the least of trade worries. Manufacture was therefore limited to bins essential as shipping containers, which incidentally might or might not be used also for display purposes.

To ensure the fairest possible distribution and prevent tying up unnecessary quantities of paper in heavy inventories, buyers of book, writing, bond, ledger or white specialty papers were forbidden to have on hand more than a ninety-day working supply and buyers of heavy cardboard containers were limited to six months' supply. Also the manufacture of paper bags for groceries and boxes for envelopes was limited to a defined list of styles and sizes.

Hides and Horsehair.—Because of submarines in the Atlantic and resultant difficulty of importing hides from South America, it is necessary to make the most of horsehides and horsehair in the country. Control was established by ordering that horsehair could be sold only to and bought only from the Commodity Prices Stabilization Corporation, which was set up some months ago to act for the Board in such matters. This was supplemented by an order of the Furniture Administration simplifying the manufacture of paint and varnish brushes and setting a schedule of prices for them.

Rubber.—To aid the rubber situation processors were prohibited by the Used Goods Administration from making more tire reliners and patches than they made last year and manufacturers', jobbers' and dealers' prices were set by schedule. With the same end in view, the Alcoholic Beverages Administration limited deliveries of draught beer, ale, stout and porter in Ontario and Quebec; and the Services Administration put a stop to wasteful delivery practices affecting tobacco and candy in the Hull-Ottawa area.

Miscellaneous.—Because of import difficulties and consequent shortage of silage molasses, the Feeds Administration set prices and undertook control of distribution.

Examining possibilities for limitation of not-so-essental articles, the Administrator of Sundry Items restricted varieties of golf clubs; golf and tennis balls; tennis, badminton and ping pong racquets; football, baseball, basketball, boxing and hockey equipment; skis, toboggans and hockey sticks.

Economies

To conserve both labour and materials the Board's division of simplified practice studied economies in manufacturing, packaging and delivery and fourteen orders, issued mostly by the Furniture and Textile Administrations, resulted from their efforts.

Furniture.—There will be no increase in the number of furniture designs manufactured, new ones being put out only when old ones are dropped. School furniture will be made only from Canadian hardwoods (except oak) and will be finished only in "school brown." A list was drawn up of specified designs and sizes of office equipment to be sold to the Dominion Government. An order limited the number of designs in which caskets may be manufactured. The manufacture of brooms made of broom corn was restricted to a specified list of varieties.

Clothing.—The manner was defined in which work clothing, leather garments and cotton sportswear are to be cut and assembled; certain materials and appendages were prohibited; even the number of labels was specified. Manufacture of handbags was limited as to design. An order on fur garments simplified designs, limited material and determined the number of styles to be made. No boxes

will be allowed for city deliveries of fur garments. The manufacture of men's felt hats (both fur and wool) was limited as to colour range, linings, bands, brims, labels and quantity and practically rationed by pro-rating deliveries on those of the two previous years.

The objective of the simplification program is to get as much civilian production as possible out of the materials and labour that are left after essential war needs have been filled. This was particularly apparent in three orders which simplified and standardized manufacture of water lift pumps, cast iron soil pipes and vitreous china sanitary plumbing.

Price Schedules

In order to ensure for civilian use a continuing adequate supply of certain commodities, certain over-all and certain local price schedules were issued. The local ones were usually occasioned by the fact that local conditions during the basic period caused freezing of local prices which were out of line with the general price ceiling; or by the fact that local labour or other conditions made it unlikely that production would continue under the ceiling; or by the fact that a tangled local price situation needed to be clarified.

Over-all price schedules issued during the month covered beef, bananas, brooms, cod oil, animal fats, silage molasses and men's furnishings. On bananas both wholesale and retail prices were specified. On animal fats manufacturers' and processors' prices were set and both were required to inform the Fats and Oils Administrator regarding production and distribution of their product. On men's furnishings, manufacturing and retail prices were set for nationally advertised men's and boys' trade-marked shirts, pyjamas and flat underwear. The manufacturer was allowed 12 per cent in excess of his January-February, 1941, prices but no increase over his legal maximum price except by permission of the Administrator; and was required to continue the same quality, size, weight, price ranges and volumes as in corresponding 1941 seasons. Retail prices also were set by schedule.

Local price adjustments affected butter, crushed stone, cheese boxes, coal, red and white cedar posts, Idaho white pine, pulpwood and freight rates on the Great Lakes. The butter order clarified a previous order which set prices for central and western Canada but left the Maritimes in some doubt. Crushed stone prices were set in two districts in Quebec Province to ensure continued production. Three orders set local coal prices in Ontario. On cedar posts producer and wholesaler prices were set for certain districts and retailers were allowed a 35 per cent mark-up on their delivered cost price. Pulpwood prices were set to clarify the situation because, pulpwood production being seasonal, there was some confusion in relation to the basic period; and the period in which contracts are made, well in advance of cutting operations, was about to begin. The schedule of lake freight rates affected the following cargoes: coal, newsprint, pulpwood, iron ore, grain and miscellaneous commodities in bulk.

Beef.—The very difficult beef situation, which had been increasingly disturbing throughout the spring, came to a head in May with severe shortages threatening.

Chief cause of this was heavy export to American markets under a trade agreement negotiated some years ago between the two countries. Under this, Canadian exporters enjoy a yearly quota of 193,000 head of beef cattle over 700 pounds at half the regular three-cents-a-pound duty rate, and governed by a quarterly quota of not more than 51,720 head. American prices usually have been sufficiently greater than Canadian to make it profitable to export while the reduced duty rate has been in effect and quotas unfilled. During the spring of this year Canadian winter-fed cattle commanded a price on American markets with which Canadian processors could not compete while continuing to sell to Canadian retailers at prices which would allow the latter to hold their prices under the ceiling, established in the basic period last fall when lower-priced grass-fed cattle were being marketed.

The Board had been unable to deal effectively with the threatened supply shortage until an Order in Council was passed giving it powers to control export of beef cattle whenever shortage in domestic supply of beef called for such action. This Order in Council was passed on May 20 and the Board announced a comprehensive plan of action on May 29. This included setting up the Wartime Food Corporation, Limited, which will operate in the domestic market to acquire cattle from exporters in sufficient numbers to maintain domestic supplies of beef. The Corporation will re-sell such cattle in the domestic market at prices consistent with wholesale beef prices established under the price ceiling policy. It will be operating in the market by July 1, when the next quarterly export quota for shipments to the United States becomes available.

Canadian cattle exporters will be licensed under the Corporation. The latter will not interfere unduly with normal trade practices, but will divert sufficient cattle from the export

market in any one quarter to ensure adequate domestic supplies. For these cattle the Food Corporation will pay Canadian exporters the full price they would have obtained had the cattle gone into the export trade.

In establishing maximum wholesale prices for beef in the fifteen zones across Canada, the Board took cognizance of seasonal price variations as between grass-fed cattle marketed in the fall and the more costly winter-fed cattle marketed in the spring. The range of prices now in effect is the highest that will prevail at any period of the year. From spring to fall the trend will be downward.

In establishing maximum prices for wholesalers and packers in the various zones, all kinds of beef were grouped into two major classes: yearlings, steers, heifers and fed calves; and cow and bull beef. The new prices were made applicable to the highest quality in each class, other qualities to find their own levels in relation thereto. The retail selling price for all cuts and portions from a carcass, side or quarter was set at the laid-down cost of same plus normal mark-up, retail prices and mark-ups being subject to periodic examination by the Board.

In a few exceptional cases the all-over price ceiling was adjusted. Two orders in this connection were of local application and ten were general. The local orders affected Hudson Bay posts and Oka cheese.

Hudson Bay Posts.—Hudson Bay posts are supplied a year to a year and a half in advance and their maximum retail selling prices in the basic period therefore did not reflect increased replacement costs up to and during the basic period. They were allowed new maximum prices reflecting replacement costs at market prices in effect during the water navigation season to the Northwest Territories in the spring and summer of 1942.

Oka Cheese.—Although the majority of retailers in Canada increased the price of Oka cheese just prior to or during the basic period, a group in Ontario failed to do so and found themselves unable to restock at the new prices and continue to sell at the old. They were therefore allowed to bring their prices into line with the rest.

General Orders.—The general orders which adjusted the ceiling affected timber, upholstered furniture, cotton wipers, canvas fronts and canned salmon. On fir, larch, hemlock, spruce, cedar and ponderosa pine produced in the prairie provinces, manufacturing and wholesale prices were set by schedule and retailers were allowed certain increases over prices formerly set by the Timber Controller. On upholstered furniture manufacturers were allowed an increase of 3 per cent over their August, 1941, prices. The Cotton Administration allowed an increase of one cent per pound in manufacturing and wholesale prices of cotton wipers. Because of substantial increases in the cost of producing the material used in canvas fronts, manufacturers were allowed a 10 per cent increase over their basic period price. Because established maximum retail prices for canned salmon were based on the cost of the 1940 pack, the wholesale price was permitted to rise fifty fifty cents per case above the basic price and the retail price was allowed to rise from a half cent to a cent per can.

In most cases where an increase in cost of labour and materials threatens to push first the manufacturing, then the wholesale and then the retail price above the ceiling, the Board has co-operated with the industry to meet the problem in the following way.

Officials of the Administration concerned meet with representatives of the industry. First they make sure that every possible economy has been effected. If, as frequently happens, this is not enough, the only way to keep faith with the ceiling policy is to reduce profits. The Administration then arbitrates between producers, manufacturers, jobbers, wholesalers and retailers to apportion the "squeeze".

This was done during May in respect to furniture, fall and winter clothing, overcoating, wool rugs and work clothing. On furniture the manufacturer was allowed to increase his price by half the increase in his production cost, the retailer absorbing the higher price to him and the consumer paying the same as before. The fall and winter clothing affected was in the women's and children's line and manufacturers were permitted to add 5 per cent to the maximum price they had established in the basic period. The Wool Administration solved the overcoating problem by approving a five-cents-per-yard increase on cheaper lines, and a ten-cents-per-yard increase on more expensive lines, applicable to manufacturers' prices only. The rug question also fell to the lot of the Wool Administration, which allowed an increase up to 50 per cent over the August-September manufacturers' prices of last year, but no retail increase. On canvas, canton, jersey and leather palm work gloves of cotton fabric the Work Clothing Administration approved manufacturers' prices 4 per cent in excess of those of June last year. The wholesaler was permitted to raise his price by half of his cost increase and the retailer was obliged to absorb this amount and maintain his basic price.

It should be remembered that in no case did the manufacturer's increase cover his entire loss. Everyone along the line absorbed as much of the increased cost as he could without imperilling production or the total financial structure.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for May, 1942

A total of 14,755 individuals were receiving training on May 31 in the 127 technical and vocational schools and training centres at which War Emergency Training Classes were being conducted. This total represents a very slight reduction from the total reported in training on April 30. There were 4,952 persons being trained in industrial pre-employment classes at the end of May as compared with 4,928 at the end of the preceding month. In the part-time industrial classes being conducted in schools, there was an enrolment of 1,436 trainees on May 31 as compared with 1,607 on April 30. A total of 4,846 men were receiving instruction in the pre-enlistment R.C.A.F. classes, this total representing a small reduction as compared with the numbers being trained on April 30. There was practically no change in the numbers receiving training in Navy and Army classes, with 2,632 trainees being enrolled in such classes as at May 31. Vocational training was being given to 94 men who had been honourably discharged from His Majesty's Forces.

During the month of May, 1942, a total of 5,888 new trainees were enrolled in the schools. Of these 3,113 entered industrial pre-employment classes, while 766 persons entered the part-time industrial classes. The R.C.A.F. pre-enlistment classes received 1,180 new trainees, while 772 commenced training in the Navy and Army classes. Under the Rehabilitation plan, 57 new trainees were enrolled during the month.

While 3,930 trainees are shown in Table 1 as being placed from industrial pre-employment classes, it should be noted that this total includes 1,575 graduates from Quebec schools who, though actually placed in previous months, were not so reported until after May 1, 1942.

Of those training in the industrial pre-employment classes, 34 left to enlist in various units of the Armed Forces, while 1,314 men from the R.C.A.F. classes completed their training and enlisted with the Air Force.

The number of women in training although included in the totals given in Table 1, are also shown separately in Table 1A. During May 1,526 women commenced training in pre-employment industrial classes, 1,232 women were placed during the month and 1,475 were still training as at May 31, 1942.

The numbers training in part-time industrial classes conducted at centres other than schools are given below. Totals are also shown with regard to classes being held in approved plant schools.

Plant Schools

Since the inauguration of the policy of aiding firms engaged in War Industry in the establishment of plant schools, for the training of new employees or the up-grading of old employees, some twenty-six firms have been granted certificates as "Approved Plant Schools" by the Department. Training in these schools covers a variety of instruction in many industries including shipbuilding, general machine shop, rubber manufacturing, textiles and aircraft construction. Skills are being developed in trainees in the production of a wide variety of items including the building of merchant and naval vessels and the manufacturing of smoke bombs, land mines, bomb tails, parts for automotive equipment, tires, ground sheets, gas masks, gun carriages, in fact nearly every item forming a part of war equipment.

Job Instructor Training Program

Since the inauguration of the Job Instructor Training Program, which is designed to

increase the ability of supervisors in war plants to train the thousands of new workers who are being inducted into War Industries, a number of Institutes for War Production Trainees have been held in various centres across Canada, including Halifax, Montreal, Toronto, Hamilton, Ottawa, Winnipeg and Vancouver. Similar institutes are being organized in the same and other centres in accordance with the demand for trainers from interested firms. To date 68 trainers have received certificates as "War Production Trainers" and programs for the development of Job Instructors, i.e. superintendents, foremen, charge hands and others trained in the correct methods of job instruction, have been started or have been scheduled to start at an early date. Since the program in connection with the holding of Institutes for trainers was instituted late in May, no statistics are yet available to indicate the expansion of the program in the plants for whom the trainers were developed.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Wartime Salaries Order Amended—Pensions for Seamen and Pilots—Alberta Factories Act and Wages Security Act—Motion Picture Projectionists and Chauffeurs in Alberta—Safety Regulations in Alberta—First-Aid in British Columbia—Minimum Wage Order and Mothers' Allowances in Quebec

THE Wartime Salaries Order has been amended to define more precisely "employers engaged in war industry" who are permitted in certain cases to grant salary increases. The regulations governing the payment of pensions to seamen for death or disability due to enemy action have been revised. A Superannuation Fund for pilots is provided for in the New Westminster Pilotage District.

In Alberta proclamations have extended the coverage of the Factories Act to dry cleaning establishments and brought the clause of the Mining Industry Wages Security Act into force which requires employers under the Act to file a statement of wages paid or payable. Two licensed projectionists are no longer required to be on duty in motion picture houses using more than one machine. Safety regulations have been made relating to oil and gas well-drilling plants, trench construction and repairs, explosives and the control of dust. In British Columbia First-Aid requirements have been revised. In Quebec a minimum wage order applying to lumber workers has been renewed and regulations under the Needy Mothers' Assistance Act have been amended.

Dominion

Canada Shipping Act

Two new by-laws for the pilotage district of New Westminster, British Columbia, were gazetted May 30.

The first one declares that anyone desiring temporarily to cease acting as a pilot must apply to the Pilotage Authority which may refuse or grant permission at its discretion.

The second provides for the establishment of the New Westminster Pilotage District Superannuation Fund. It will be built up by the Pilotage Authority setting aside each month from the gross revenue accruing from the pilotage dues an amount to be determined yearly by the Authority after consultation with the Pilot's Committee.

A pilot who has served at least five years during which he made contributions to the fund will, at the time his licence expires or is cancelled due to age or physical or mental incapacity, receive monthly pension payments for life. The amount of the payments will depend on the length of service but in no case may they exceed $1,200 in any year.

The widow of a pilot eligible for pension will, until her re-marriage, receive a pension equal to not more than one-half of the amount her husband would have received if alive. Any children surviving after the widow's death will receive equal shares of the amount of the widow's pension until they are 18 years of age, but in no case may they each receive more than $300 a year.

Provision is made for the refund of contributions to pilots who are ineligible for pensions at the time of retirement. Special consideration is given to pilots who retire due to a shipping casualty as defined in the Canada Shipping Act.

Wartime Salaries Order

P.C. 4346, May 26, 1942, amends the Wartime Salaries Order (P.C. 1549, February 27, 1942, LABOUR GAZETTE, March, 1942, pp. 283-287). The amendment is designed to clarify the meaning of clause 5 which permits employers engaged in war production to grant, with the permission of the Minister of National Revenue, a salary increase in certain specified cases on the ground that such increase is important to the war effort.

The amendment defines more precisely the term "employer engaged in war industry." The term means, in general, an employer engaged in the production, repairing or servicing of implements or munitions of war, ships or aircraft. It also includes an employer engaged mainly in supplying parts, materials, equipment or services for use in munitions of war, ships or aircraft and one doing construction work for war purposes. It does not include an employer engaged in supplying, producing, repairing or servicing goods, material, equipment or services of general use such as are common in times of peace.

In particular, war industries are businesses established since September 1, 1939, or businesses which have substantially expanded, converted or altered their operations at the request of the Department of Munitions and Supply to produce, service or repair implements or munitions of war or to supply materials or equipment for such operations.

The four specified cases in which a salary increase may be granted remain unchanged, nor is there any alteration in the clause requiring employers to obtain permission from the Minister of National Revenue before paying a salary increase.

Pensions for Seamen

The regulations providing for pensions to Canadian seamen or their dependents in cases of disability or death of the seamen resulting from enemy action have been revised by P.C. 104/3546 of April 30.

Under previous orders (LABOUR GAZETTE, 1939, p. 1202; 1941, p. 650) Canadian seamen serving on Canadian ships or ships of British or foreign registry certified to be engaged on essential war work, and Canadian salt-water fishermen are compensated for loss of personal effects or of remuneration due to capture or internment, are given free medical treatment for injuries and receive pensions for death or disability resulting from enemy action or counter-action: (P.C. 3358 as amended, P.C. 3359 as amended; P.C. 3492; and P.C. 12/4209 as amended).

Under the revised regulations pensions may also be granted to seamen who suffer disability or death by reason of extraordinary marine risks arising out of the war, and to seamen killed or injured while in a port outside Canada or while proceeding by land, sea or air outside of Canada to or from their ships.

The new regulations also empower the Canadian Pension Commission to presume death for the purposes of these regulations in cases where the available evidence raises no reasonable doubt, in the opinion of the Commission, that the death has occurred.

Provincial

Alberta Factories Act

Dry Cleaning Works have been brought within the scope of the Factories Act by a proclamation issued May 5, 1942, and gazetted May 15.

Alberta Mining Industry Wages Security Act

By a proclamation issued April 14 and gazetted April 30, section 3 of this Act has been declared in force from May 1, 1942. This section requires employers in designated industries to submit to the Minister charged with administration of the Act on May 15 of each year a statement of the wages paid or payable by them in the preceding twelve months. They may also be required by the Minister to furnish a statement of their assets and liabilities. An employer proposing to engage in one of the designated industries must submit a statement of assets and liabilities and any other information required by the Minister.

The Act applies to mines and, if the Lieutenant-Governor in Council so stipulates, it may be applied to lumber camps, quarries, gas and oil wells and works in connection with the mining or processing of salt or tar sands.

Alberta Public Service Vehicles Act

By an order gazetted May 15, the clause in the regulations relating to medical certificates for chauffeurs (LABOUR GAZETTE, 1940, p. 446) has beeen reworded so that the issuance of a public service vehicle certificate is now contingent on the presentation of a satisfactory medical certificate testifying to the chauffeur's physical fitness.

Alberta Theatres Act

The shortage of labour has induced Alberta to relax its regulations requiring two licensed projectionists to be on duty in motion-picture houses where more than one standard projector is being operated. The amending regulations, gazetted and effective May 15, also reduce the period of apprenticeship preceding application for a third-class projectionist's licence from twelve months to six, and permit the employment of one apprentice for every full shift instead of only one to a theatre as before.

Theatres operating only one projector must have one qualified projectionist on duty. Theatres operating more than one machine have been divided into four classes according to their seating capacity and the size of the community in which they are located. Those which seat not more than 500 persons must have a third-class licensed projectionist on duty if situated in a community of less than 3,000 population, and must have a second-class projectionist and an apprentice on duty if the population exceeds 3,000. Theatres seating over 500 persons are required to have on duty a second-class projectionist and an apprentice in centres under 3,000 in population,

but in communities over 3,000 they must employ a first-class projectionist and another licensed projectionist of any class.

Alberta Workmen's Compensation Act Safety Regulations

New safety regulations issued by the Workmen's Compensation Board for oil and gas well-drilling plants, for trench construction or repairs, for the handling of explosives, and the control of dust were gazetted April 30 and will become effective thirty days after that date.

The first set of regulations applies to the drilling, cleaning, repairing, operation and maintenance of oil and gas well-drilling plants, rigs and equipment, and replaces regulations issued in 1928 (LABOUR GAZETTE, 1928, p. 974). Detailed specifications for buildings, machinery and equipment are laid down to minimize the hazards in such plants. Certain working conditions are also specified.

Workers must, where necessary, be provided with safety belts and lines which are periodically inspected and tested. If there is danger of material and equipment being dropped from above, hard hats must be supplied to workmen.

For work in storage tanks or confined spaces, air line respirators or gas masks are required unless all injurious gas has first been removed. A worker in a tank provided only with manholes in the top must be secured by a rope from the outside and be attended by another workman on watch outside the tank. Short alternating shifts are recommended for work in a confined space where atmospheric conditions are nauseating.

Smoking is forbidden within a hundred feet of any receptacle containing petroleum or natural gas products, and within 75 feet of a petroleum or natural gas well. Vapour-proof flashlights and lanterns must be used

The new regulations applying to the excavation of trenches lay down specifications for the shoring and bracing of sides, the provision of ladders, and the sinking of shafts. They replace regulations issued in 1928 (LABOUR GAZETTE, 1928, p. 974).

Before workers may enter a sewer or underground manhole, tests for gas must be made, and, if possible, the gas should be removed. If there is any doubt as to the safety of the working conditions, gas masks, safety belts and life lines must be worn by workmen. All underground manholes and sewers where excavating or repair work is being done must be electrically lit, and inspectors should be provided with battery-operated electric lamps. If oil or other combustible material is found in a trench, work must be stopped until it is removed.

Operators engaged in sinking shafts for sewer construction are to be governed by the Safety Regulations covering water-well operations (LABOUR GAZETTE, 1939, p. 676). Certain additional conditions are laid down regarding the operation of hoists in shafts.

The new set of regulations governing the storage, handling and firing of explosives apply to all operations or industries not covered by the Coal-Mines Regulation Act.

Every employer must secure a permit from the Workmen's Compensation Board before purchasing explosives to be handled by workers covered by the Workmen's Compensation Act. All workmen engaged in handling and firing explosives must hold a certificate of efficiency issued by the Board or by the Department of Mines. Smoking by workmen while handling or transporting explosives is forbidden.

The Explosives Act of Canada and regulations made under it are to govern the storage and transport, other than by rail, of explosives in Alberta. Certain additional requirements in regard to storage and transport are set forth in the regulations. Fire extinguishers and red flags must be carried on all vehicles transporting explosives, and extra passengers are prohibited.

Detailed regulations regarding the firing of explosives by various methods, the procedure for dealing with misfires, the testing of circuits and precautions to be taken for the protection of workmen, the public and property are included.

The new regulations for the control of dust call for approved ventilating systems for all dust-producing operations covered by the Workmen's Compensation Act. If it is impracticable to remove the dust by ventilation, respirators must be provided by the employer and worn by the workmen. Regular cleaning of places where dust accumulates is required either by approved vacuum methods or by wet sweeping.

All abrasive blasting and similar operations must be carried on inside a "blasting enclosure". Workers in such enclosures must be supplied with a helmet approved by the

Board, and furnished with a pure, warmed air supply through the helmet. Where air laden with silica dust is discharged outside the factory, care must be taken not to create a health hazard or to permit the air to be returned to the factory.

British Columbia Workmen's Compensation Act

New First-Aid requirements effective from May 31, 1942, have been issued by the British Columbia Workmen's Compensation Board. They replace ones issued in 1922.

Employers are divided into classes according to the nature of the industry in which they are engaged and the number of the workers employed by them. Different first-aid kits are specified for each class.

All employers with from 50 to 100 workers must employ one worker possessing an unexpired Certificate of Competency in First-Aid to be in charge of the first-aid kit. Those with more than 100 employees must also provide a first-aid room. When a business is located five miles or more from a doctor or hospital, it is required to have a certificated first-aid person if at least 15 workers are employed, and shall have a first-aid room if there are 50 or more workers. An Industrial First-Aid Certificate is satisfactory to the Board. The first-aid attendant must keep a record of all circumstances respecting an accident.

If workers are employed in areas adjacent to a central camp, the first-aid facilities shall be kept at the camp but first-aid attendants shall be so located that an injured workman may be reached by one within 10 minutes of an accident.

Every employer must provide proper care and attention to an injured workman, and have suitable transportation available with a competent attendant to take injured workmen to the nearest doctor or hospital when necessary.

Employers who comply with the First-Aid Service Requirements and Accident Prevention Regulations are eligible for the preferred rate of assessment for workmen's compensation which is one-half of one per cent lower than the regular rate. The cost of installing and replenishing first-aid boxes must be borne by the employer.

Quebec Minimum Wage Act

By a notice gazetted May 23, Order 39 relating to workers engaged in forest operations (LABOUR GAZETTE, 1941, p. 556) has been renewed until May 3, 1943.

Quebec Needy Mothers' Assistance Act

The regulations under this Act have been amended to provide an additional monthly allowance of $5 for a beneficiary whose husband is totally disabled and lives with her, provided the total allowance would not then exceed the fixed maximum which has been raised from $45 to $50. This change, effective from April 1, 1942, is in accordance with the 1940 and 1942 amendments in the Act extending its coverage to mothers whose husbands are totally disabled.

The original regulations issued in 1938 (LABOUR GAZETTE, 1938, p. 1236) were replaced on August 1, 1940. In the 1940 regulations, the sections dealing with the basis, readjustment, time and mode of payment of allowances were substantially altered while the procedure regarding the submission, examination, proof, hearing and deciding of applications was changed very slightly. In particular, monthly allowances were cut from $40 for a woman with two dependent children under 16 to $25 for a mother with one dependent child if she resided in a centre with a population exceeding 10,000 and to $20 if she lived elsewhere. The allowance of $5 for each additional child in excess of two was changed to $2.50 for each additional child in excess of one in accordance with the 1940 amendment in the Act making eligible for an allowance the mother of one child. The maximum monthly allowance was cut from $60 to $45. A later regulation, effective from April 1, 1941, raised the allowance for each child under 16 in excess of one from $2.50 to $5.

Under the rules as laid down in 1940 a mother may earn up to $300 a year without any reduction in her allowance. If a mother is unable to work, she may be granted an additional $5 per month provided the total is within the fixed amount. No allowance may be paid for more than one month during which the mother is receiving relief allowances or other forms of public assistance from a city, town or municipality.

LABOUR LEGISLATION IN ONTARIO AND MANITOBA IN 1942

Ontario

THE Ontario Legislature, in session from February 11 to April 15 enacted legislation limiting the duration of interim injunctions in labour disputes and providing for the establishment of day nurseries. Laws relating to workmen's compensation, regulation of factories, weekly rest-days and labour contract were amended.

Interim Injunctions in Labour Disputes

A section added to the Judicature Act provides that an ex parte interim injunction to restrain any person from doing any act in connection with a labour dispute shall not be for a longer period than four days. "Labour dispute" is defined as "any dispute or difference between an employer and one or more employees as to matters or things affecting or relating to work done or to be done by such employee or employees or as to the privileges, rights, duties or condition of employment of such employee or employees."

Day Nurseries

New clauses in the Department of Public Welfare Act authorize the Department to establish and assist in establishing day nurseries for the care and feeding of young children and to make regulations governing such nurseries and providing for licensing them.

Workmen's Compensation

A number of amendments in the Workmen's Compensation Act are designed to clarify the law and the practice of the Workmen's Compensation Board. The section authorizing an extra payment of $125 for expenses of, or connected with, transportation of the body of a workman from the place where death occurred to the place of interment in Ontario, was amended to enable such sum to be paid for necessary expenses whenever, owing to circumstances, the body of a workman is transferred for a considerable distance for burial.

The sections dealing with compensation for permanent disability were redrawn to make it clear that the Board is to estimate impairment of earning capacity from the nature and degree of the injury rather than from the difference in average earnings before and after the accident but may use the latter method if it deems it more equitable. The Board is to fix a sum as compensation proportionate to such impairment, but not exceeding the proportion of 66 2/3 per cent of the workman's average earnings during the previous 12 months if he has been so long employed or, if not, then for any shorter period during which he has been in the employ of his employer. Compensation is to be a weekly or other periodical payment during the lifetime of the workman, or for such period as the Board may fix, and is payable even if the workman is not disabled for seven days from earning full wages. A new clause confirms the practice of the Board of compiling a rating schedule of percentages of impairment of earning capacity for specified injuries or mutilations. As formerly a lump sum may be paid in lieu of periodical payments where the impairment of earning capacity does not exceed 10 per cent.

The provision is deleted which barred a workman from compensation for an industrial disease unless the disease was due to the nature of the employment in which he was engaged at any time within twelve months previous to the date of his disablement. Minor amendments in the definition of "silicosis" were made to conform to the established practice of the Board. The section in the schedule of industrial diseases which deals with cancer caused by working with pitch and tar was amended to specify the types of cancer and the industries in which they commonly occur.

All decisions made at any time by the Board are confirmed but this provision is not to impair the Board's right to review decisions already made. Matters now pending determination before the Board are to be dealt with in accordance with the Act as amended.

The Board may now invest its funds only in securities issued or guaranteed by the Province of Ontario and, to a limited extent, in debentures issued under the Tile Drainage Act.

Factories

The Factory, Shop and Office Building Act was amended to limit the time allowed an employer to comply with written orders of the inspector for the remedying of dangerous or unhealthy conditions in any factory or in connection with any elevator or hoist in any establishment under the Act. An employer must now comply with such an order within thirty days or such period as the inspector deems necessary. The penalty for failure to do so has been raised and now ranges from $50 to $500 instead of $20 to $200 as formerly. The alternative penalty of 12 months' imprisonment is unchanged.

The sections of the Act relating to safety devices on elevators are revised and definite standards laid down for their construction and operation. As formerly, the minimum age for

elevator operators is 18 years and the Lieutenant-Governor in Council may make regulations governing the construction, inspection and use of elevator and hoists.

The sections of the Act authorizing municipal councils to make by-laws requiring the early closing of shops were amended to permit closing at 6 p.m. instead of 7 p.m.

Wages

An amendment in the Master and Servant Act raises the maximum amount of wages which may be recovered under an order of a justice of the peace, from $100 to $200.

A section added to the Mechanics' Lien Act provides that sums received by a building contractor or sub-contractor on account of the contract price shall constitute a trust fund for the benefit of the owner, contractor, sub-contractors, Workmen's Compensation Board, workmen and persons who have supplied material and the builder or contractor will be the trustee of the fund. A contractor who commits a breach of this trust will, therefore, be guilty of a criminal offence.

Mines

Under a new rule in the Mining Act no person may build or maintain a fire underground without proper authority and suitable instructions and then only after the necessary fire-fighting equipment has been provided.

Weekly Rest-day

The One Day's Rest in Seven Act, which provides for a weekly rest-day for hotel and restaurant employees in cities and towns of 10,000 population and over, was amended to abolish the exception formerly made of any class of employees in which there are not more than two. But, as before, watchmen, janitors, superintendents, foremen and persons who are not employed for more than five hours a day are outside the Act.

Exemption of Tools From Seizure

An amendment in the Execution Act raises from $200 to $600 the value of the tools, implements and other chattels which are exempt from seizure for debt if they are used by the debtor in his business.

Credit Unions

Under an amendment in the Credit Union Act, 1940, provision is made for the incorporation of any ten or more credit unions in a league whose objects include the encouragement of educational and advisory work.

The objects for which credit unions may be incorporated now include the making of loans to other credit unions, depositing moneys with and making loans to any league incorporated under the Act, up to 25 per cent of the assets of the credit union, and investing moneys, up to 25 per cent of its capital, in the shares of any credit union or league.

The section was repealed which forbade officers, directors and other members participating in the management to withdraw or transfer their shares.

Manitoba

The Manitoba Legislature which met on December 9, 1941, and was prorogued on March 31, 1942, amended laws relating to fair wages on public and private works, minimum wages, conciliation and investigation in industrial disputes, workmen's compensation, weekly rest-day and the regulation of elevators and hoists.

Wages

Amendments were made in the Fair Wage Act, Part I of which has provided for the regulation of wages on provincial public works and on private construction works of the value of $100 or more and Part II of which, like the Industrial Standards Acts in other provinces, permits minimum wages and maximum hours to be fixed by Order in Council in specified industries, if they are agreed upon by a sufficient proportion of employers and employees in the industry concerned.

Changes in Part I include bringing within its scope the work of delivering by truck materials for use in any construction work.

Contracts for private construction work costing less than $100 in the Greater Winnipeg Water District are no longer exempt under Part I but the $100 exemption still applies to private works in cities and towns having a population exceeding 2,000 and in any other portion of the Province to which the Act may be extended by the Lieutenant-Governor in Council. Maintenance work done by or under the immediate direction of the owner of the property by a regular maintenance staff is still exempt in all districts if the work is not undertaken with a view to the sale or rental of the property. Every contract for private work must now contain a clause setting forth substantially the terms of the fair wage order and a stipulation that no mechanic, workman or labourer may be employed on the work on terms and conditions other than those specified. This provision formerly applied only to public works. The Minister of Labour now has the duty, formerly assigned to the Minister of Public Works, of requiring the employer to

submit monthly reports showing rates of wages, amounts paid and amounts due and unpaid to workmen and labourers, and this provision is made applicable to private as well as public works.

Added to the industries to which Part II may be applied by Order in Council are laundering, trucking and cartage.

The constitution of a special board, which the Minister may authorize to inquire into conditions in any industry within Part II and to recommend a schedule of wages and hours for that industry, is now laid down in the Act. Such board is to consist of a chairman, who may be an officer of the Department of Labour, and a number of other persons representing equally employers and employees. Each member, other than the chairman, is to hold office for two years and thereafter until his successor is appointed but he may be reappointed for a further term. A schedule may now provide for and authorize any regulation or the doing of any thing, not inconsistent with the Act, which is necessary to carry out the provisions of the Act but which is not otherwise provided for. The section providing a penalty for the contravention of a schedule by an employer was amended to make it clear that it applies to any provision of the schedule. This amendment was made in consequence of a magistrate's ruling that the section, as it stood, covered only the wage sections and did not impose a penalty for failure to charge minimum prices fixed in the barbers' schedule.

The Minimum Wage Act is amended to exclude from its operation employees covered by the Fair Wage Act and to revise the sections dealing with the constitution of the Minimum Wage Board. A person in the public service may be named as chairman of the Board. The term of office of the four members of the Board other than the chairman is two years, unless they are sooner removed by the Lieutenant-Governor in Council, but each is to hold office until his successor is appointed and he may be re-appointed for a further term. In making the first appointments the Lieutenant-Governor in Council may appoint one representative of employers and one of employees for one year.

Minimum wage orders are now to be made by Order in Council and not directly by the Minimum Wage Board. The Board, of its own initiative, however, or on the authorization of the Minister, may make written proposals for such regulations, which may be given effect to, with or without change, by the Lieutenant-Governor in Council. Employment on statutory holidays and payment for such employment are added to the matters which may be regulated.

The provision enabling the Lieutenant-Governor in Council, on recommendation of the Board, to extend the operation of the Act to sections of the Province outside of cities and to make orders applicable to such sections was replaced by a provision that any regulation may be general in its application or limited to any locality or localities. Statistical information which was formerly to be procured by the Department of Labour, as requested by the Board, may now be collected by either the Board or the Minister of Labour. The Board may, of its own initiative, and must at the request of the Minister, make inquiries into labour conditions. Formerly such investigations were left entirely to the Board's discretion.

Special permits for exemption from an order or for overtime or for the employment of part-time, handicapped or inexperienced workers are now to be issued by the Minister, instead of by the Board or by an officer of the Department of Labour, as formerly, subject to such conditions as to time, payment and rates of wages and other matters as the Board, with the approval of the Lieutenant-Governor in Council, may prescribe. Application for permits must be made in writing. Employers' registers may now be inspected by officers of the Department of Labour as well as by representatives of the Board.

An amendment in the Wages Recovery Act clarifies the procedure to be followed by a justice of the peace in issuing certificates of judgment for the payment of wages exceeding $20.

Conciliation and Investigation in Labour Disputes

The section of the Strikes and Lockouts Prevention Act which governs application for a board of conciliation by employees who are members of a trade union, was revised and now enables such application and the declaration accompanying it to be signed by two of the officers of the trade union authorized by a resolution passed by a majority of the employees directly affected, who are members of the union, at a properly called meeting of which all of them had at least three days' notice. The resolution must be recorded in the minutes of the meeting. Alternatively, the application may be signed, as formerly, by such officers authorized in writing by a majority of the union member employees directly affected.

A Bill which failed to pass would have further amended this Act to declare it lawful for employees to conduct collective bargaining through a negotiating committee or trade union appointed by a majority vote of the employees affected or any class of them and would have provided a fine not exceeding $500

for any employer refusing so to bargain. The existing Act declares it lawful for employees to bargain through their organizations or representatives, if the representatives are British subjects.

Workmen's Compensation

A section added to the Workmen's Compensation Act enables the Workmen's Compensation Board, with the approval of the Lieutenant-Governor in Council, to make arrangements with the Board of Saskatchewan or of Ontario, or with both, for compensation for industrial diseases for workmen employed in industries whose operations extend across the provincial boundary. A 1930 amendment in the Act made similar provision in respect of accidents and an agreement was entered into with Saskatchewan in the same year. The Saskatchewan Act was recently the subject of an amendment similar to the one in Manitoba. (LABOUR GAZETTE, May, 1942, p. 591).

Weekly Rest-day

An amendment in the One Day's Rest in Seven Act, which provides for a weekly rest-day for most classes of industrial employees in cities and also in other parts of the province if so provided by the Lieutenant-Governor in Council, brings the Act into line with the reorganization of the Department of Labour by giving to the Deputy Minister of Labour the power to grant exemption formerly given to the Chief Inspector.

Hours of Labour of Drivers of Public Service Vehicles

The section of the Highway Traffic Act dealing with hours of employment of drivers of public service vehicles and commercial trucks was revised and now prohibits such a driver being on duty in driving or in any capacity for more than 10 hours in any 24 consecutive hours. In an emergency due to breakdown of the vehicle, he may remain on duty for not more than two hours longer. Formerly, hours were limited to nine for driving or 10 in any capacity but no limit was placed on emergency overtime. As heretofore, the driver may not be on duty for more than six days a week and all provisions of the section apply equally to an owner who is also the driver of the vehicle. The maximum penalty for contravention of these provisions is $200 and costs. Formerly, a penalty ranging from $25 to $50 was to be imposed for a first offence and $50 to $200 for a subsequent offence.

Moving-Picture Machine Operators

An amendment in the Amusements Act provides that the chairman of the board of examiners of moving-picture machine operators shall be an official of the Department of Labour instead of the Deputy Minister of Labour. A proposed amendment, struck out by the Legislature, would have enabled the Board to make regulations concerning hours of labour and holidays of employees.

Licensing of Electricians

Amendments in the Electricians' Licence Act include a definition of "electrical equipment", a change in the clauses dealing with application of the Act, to bring them into conformity with the code of the Canadian Engineering Standards Association, and a revision of the section setting up the examining board, to make it clear that it is to have one representative of employers and one of employees with a representative of the Department of Labour as chairman. Power is given to the board to grant provisional licences in special cases where a journeyman's licence could not be granted but circumstances require that a person should be licensed for the class of work. Regulations of the Lieutenant-Governor in Council may now provide for the establishment of standards of construction, installation, maintenance or repair of electrical equipment or work and for inspection in districts where there is now no regular inspection service. The minimum fine for carrying on the business of an electrical contractor or doing electrical work without a licence is reduced from $50 to $25, the maximum remaining at $200. No person may install electrical equipment not approved by the Canadian Engineering Standards Association. A new provision enables a person infringing the Act through ignorance or inadvertence to remedy the breach before a prosecution is ordered.

Elevators and Hoists

An amendment in the Elevator and Hoist Act provides that the Elevator and Hoist Board shall consist of an equal number of representatives of employers and employees under the chairmanship of an official of the Department of Labour, each member to hold office for two years unless sooner removed. Regulations dealing with remuneration of members and enforcement of its rules may no longer be made by the Board.

Early Closing of Shops

Sections added to the St. Boniface Charter enable the City Council to pass a by-law permitting any shop affected by a general early closing by-law under the Shops Regulation Act to observe early closing on a day other than that fixed by the general by-law. A further amendment declares that the power to license

and regulate shall be deemed to include the power to prescribe times and places for carrying on trades, to prevent the issuing of licences to females or to minors under a specified age or their employment in a licensed trade, and to forbid a licensee to employ unlicensed persons.

Committee on Old Age Pensions

On December 15, 1941 a Special Committee of the Legislature was appointed to study the Old Age Pensions Act and the regulations affecting it. The Committee's Report, presented on March 26, 1942, recommended that the Government make strong representations to the Government of Canada that the maximum old age or blind pension should be increased from $240 to $360 per annum, subject to reductions by the amount of the pensioner's income in excess of $125 a year; that the maximum income which a pensioner may receive without losing his eligibility for pension should be raised from $365 to $425 a year; that pay assigned to his parents by a man enlisted in His Majesty's Forces should not be considered as income for pension purposes, whether or not it is augmented by a dependant's allowance to either parent; that the time during which an applicant for pension is required to have actually lodged within Canada be reduced from 5,844 days to 5,114 days; that pensions commence from the date of application, if all qualifications are in order; that the regulation governing computation of income be amended to provide that medical, hospital and other extraordinary expenses paid for a pensioner by his family or paid out of his income shall not be counted as income; that the Provincial Government take immediate steps to ensure that the above recommendations become effective at the earliest possible date and make every effort to bring them into operation; that the Provincial Government approach the Governments of the other provinces to ensure that they join in urging the Dominion Government to make amendments to carry the above recommendations into effect. The Legislature concurred in the report on March 31, 1942.

ANNUAL CONVENTION OF LABOUR EDUCATIONAL ASSOCIATION OF ONTARIO

THE fortieth annual convention of the Labour Educational Association of Ontario was held in London, Ontario, on May 25, delegates from industrial centres in all parts of the province being in attendance.

Following an address of welcome by Mr. A. E. Bettam, President of the London Trades and Labour Council, the President of the Association, Mr. Wilfrid Bircher, expressed the organization's appreciation of the cordial welcome extended. He referred to the illness of Mr. Tom Moore, President of the Trades and Labour Congress of Canada and paid tribute to the invaluable service which he has rendered the workers' cause and stated that he felt sure all present shared in the wishes of the officers of the Association that he would soon be sufficiently restored to health to resume his duties. Due to his illness, Mr. Moore was unable to attend the convention as a delegate.

The President then extended a special welcome to the younger delegates present and stated: ". . . . . I appeal to you to lend every effort and accept every opportunity presented to you to play your part. In fact it is the duty of every trade unionist to co-operate and support any and every legitimate medium—convention or conference—of labour which aims, as the Labour Educational Association of Ontario does, to further the aims and objects of the movement to which we belong and when it so happens that our efforts are challenged or that our methods and policies are criticized it is the bounden duty of those who are in a position to do so, to offset this and correct any misunderstanding which in many cases is the result of ignorance of the policies and activities of the labour movement. Let us all do our part in this and thereby further the interests of organized labour."

In a telegram, Hon. Humphrey Mitchell, Minister of Labour, and a former President of the Association, greeted the delegates and commended the purposes and activities of the organization.

One of the main topics discussed at the convention was the Government's Wage Control Policy. The discussion on this subject was lead by Mr. E. Ingles, Vice-President of the International Brotherhood of Electrical Workers and Mr. Fred Molineux, representative of the Brotherhood of Painters, Decorators, and Paperhangers of America. Mr. Ingles drew attention to the pledges of co-operation extended by the Trades and Labour Congress of Canada immediately following the outbreak of war and dealt with the progressive steps leading to the passing of Order in Council P.C. 8253, establishing a Wages Stabilization Policy administered by a National War Labour Board and Regional Boards. He outlined the effects of wage control regulations upon wage

earners and the varied interpretations of these by different authorities which had resulted in "confusion confounded."

Mr. Molineux dealt particularly with the administrative aspect of the wage control policy and gave a comprehensive outline of the position of workers under P.C. 8253 and advised as to the procedure to be followed where workers desired to secure adjustments in wage scales.

The discussion on the topic "Labour—Management Co-operation" was lead by Mr. John Noble, representative of the American Federation of Labour. Mr. Noble urged that workers guard against accepting proposals which might detrimentally affect their rights in respect of freedom of organization and collective bargaining. As a result of the ensuing general discussion, the convention instructed the Secretary-Treasurer to communicate with the Executive Council of the Trades and Labour Congress of Canada outlining the views expressed on the question with a view to having a pronouncement of policy made at the forthcoming convention of the Congress.

The election of officers for the ensuing year resulted as follows: W. Bircher, Hamilton, President; M. H. Nicols, Toronto, Vice-President; E. Ingles, London, Secretary-Treasurer. Executive Board: F. Ackerknecht, Kitchener; Mrs. E. Finkle, Toronto; F. W. McRae, Ottawa; W. S. Legg, London; J. F. Cauley, Hamilton; W. Buhler, St. Catharines; A. V. Sallaway, St. Thomas; George Lauder, Windsor; Roy A. dePlanche, Thorold. By virtue of a provision in the Constitution, immediate Past President Peter Grant, St. Catharines, continues for a further term as a member of the Executive Board.

Kitchener was chosen as the next convention city.

WORKMEN'S COMPENSATION IN NEW BRUNSWICK AND NOVA SCOTIA

Annual Reports of Provincial Boards

THE Workmen's Compensation Boards of New Brunswick and Nova Scotia have issued their annual reports for 1941, a brief summary of each appearing below.

New Brunswick

The twenty-third annual report of the New Brunswick Workmen's Compensation Board contains a provisional statement of income and expenditure for the year 1941. The total income for this period is estimated at $1,147,878.63, and the expenditure at $926,-798.90, leaving an estimated credit balance of $221,079.73. To this is added the cumulative credit balance of $744,776.42 carried forward from the year 1940, which leaves an estimated surplus of $965,856.15.

Accident Statistics.—Complete accident statistics for the year 1940 appear in this report. The cost of compensation amounted to $753,-776.89 when a total of 10,940 compensable accidents were reported to the Board. Of these, 22 were fatal; 1 resulted in permanent total disability; 274 in permanent partial disability; 7,257 in temporary total disability; and 3,386 required medical aid only. Non-compensable accidents reported to the Board numbered 1,046.

The following classifications enumerate the causes of accidents reported to the Board: Prime movers, 201; working machines, 526; hoisting apparatus, 376; dangerous substances, 272; stepping on or striking against objects, 1,221; falling objects, 2,044; handling objects, 1,448; tools, 2,065; runaways and animals, 94; moving trains, vehicles, etc., 401; fall of persons, 1,712; all other causes, 1,382.

Factory Inspection.—Included in the report of the Workmen's Compensation Board is the statement of the New Brunswick Factory Inspector for the year ending December 31, 1941. During 1941 there was a considerable increase in the number of applications for new and renewal licences, 143 of the former and 1,094 of the latter, being issued. The report of the Inspector states that during 1941 factories in the province were feeling the effects of the war as indicated in enlarged plants, increased staffs and the installation of additional equipment. Because of the difficulty realized in securing experienced men, it was found that a great many of the accidents which occurred were due to inexperienced men handling equipment with which they were not familiar.

Nova Scotia

As indicated in the report of the Workmen's Compensation Board of Nova Scotia for the year 1941, there was a total income for all industries, actual and estimated, of $2,405,366.57, an increase of approximately $287,000 over the previous year. Expenditure, actually incurred and estimated, for the year, amounted to $2,494,093.81. Rates for the various groups in all classes of industries

within the scope of Part 1 of the Act vary from time to time as the accumulated experience for each group or class changes. The average rate of assessment for all years was $2.14 per hundred dollars of payroll; for 1940 it was $2.88, and for 1941, $2.60. The ratio of administration expense to the compensation cost of accidents for all years was 7·35 per cent.

Accident Statistics.—A large increase in the number of accidents occurred in Nova Scotia in 1941. With 12,500 accidents reported to the Board in 1939 and 14,699 in 1940, the figure reached a new high of 16,819 in 1941. It was pointed out in the report that particularly in wartime, industries could not afford to have their workers injured and "money spent for the promotion of safety should not be considered an expense but rather an investment in human life". There was a total of 16,025 compensable accidents reported to the Board, of which 13,529 claims were finally disposed of. Of these 61 were fatal; 139 resulted in permanent disability; and 13,329 resulted in temporary disability (7,928, compensation; 5,401, medical aid only). The number of claims partially disposed of was 2,496, this figure including 4 death cases. Non-compensable accidents, other than fatal, numbered 792, and fatal, 2. Detailed statistics are also given of accidents and claims for the year 1940, and final financial statements for that year.

The report shows that during 1941 an actual and estimated amount of $195,251.22 was expended for medical aid. It is also stated that the number of disabled workmen and dependents becoming charges on the pension fund is steadily increasing, i.e., the number of widows being cared for at the close of 1941 was 711 as against 693 in the previous year, and the number of disabled workmen was 1,820 as compared with 1,729 in 1940.

JOINT PRODUCTION COMMITTEES IN GREAT BRITAIN AND THE UNITED STATES

DURING the past number of months the Governments of Great Britain and the United States have actively promoted the formation of joint committees of labour and management in war plants to act in an advisory capacity in matters relating to production, and a great many such committees have recently been set up. Joint works councils have, of course, been in existence for many years in some plants in both countries but, as a rule, their functions were not so definitely directed towards production problems as is the case with the present type of committee. The present committees are clearly restricted in their activities to giving advice on the technical problems involved in the attempt to increase production and they are specifically prohibited from dealing with normal trade union matters such as the negotiation of wages. Their purpose is merely to provide a channel through which the ideas of the man at the machine for improving the operation of his machine can reach the management, and to eliminate the discontent which arises among workers when unavoidable stoppages and bottlenecks are not explained to them or when they feel that their ideas are not being given thorough consideration.

This clear delineation of functions has precluded the possibility of any conflict between the committees and the established trade unions, and in fact the unions in both countries have played a prominent part in establishing such committees as have already been formed. At the same time, interference with the responsibilities of management is also avoided by the fact that the committees are purely advisory in nature and have no executive powers. In both Britain and the United States management was in general unsympathetic at first, but with the realization that the activities of the committees are confined to giving advice and that those committees which have already been established are performing a useful service, this suspicion has tended to disappear.

Great Britain

On February 26, 1942, an agreement was signed by the British Ministry of Supply and the trade unions concerned for the establishment of "Joint Production Consultative and Advisory Committees" in all Royal Ordnance Factories. An almost identical agreement was signed on March 18 between the Engineering and Allied Employers' National Federation and the various unions representing workers in private engineering firms. Similar committees seem also to have been established in the Aircraft Ministry's shadow factories.

These agreements represent the culmination of a movement which has been gaining strength in Great Britain as the war progressed. The first suggestion came from the shop stewards in the aircraft industry during the armament boom of 1938. The Government

has generally been sympathetic and in the last six months has actively promoted the establishment of committees.

Both agreements prohibit the committees from dealing with trade union matters and give the following examples of questions which may properly be discussed: (*a*) maximum utilization of existing machinery, (*b*) upkeep of fixtures, jigs, tools and gauges, (*c*) improvement of methods of production, (*d*) efficient use of the maximum number of working hours, (*e*) elimination of defective work and waste, (*f*) efficient use of material supplies, and (*g*) efficient use of safety precautions and devices. The rights of the trade unions are also protected by the manner in which the committees have been constituted. It has been noted that they were set up by agreement with the unions concerned. Moreover, only organized workers are eligible for membership on the workers' sides and the elections are conducted by the unions in the Ordnance Factories and jointly by the management and unions in private firms. At the same time, however, the committees, in keeping with the purpose for which they are set up, are made as widely representative as possible in that all employees, whether union members or not, may vote, and any person in the plant may be co-opted in a consultative capacity.

Each committee consists of management and workers' sides, and there is an equal number, not exceeding ten each, of management and worker representatives. The management representatives are appointed. Each side has its own secretary. Meetings of the whole committee must be held fortnightly, and, to expedite business, each side meets weekly. Special meetings may be held at the request of either side.

United States

Labour-management committees in the United States are in all fundamental respects similar to the joint production advisory and consultative committees in Great Britain, as regards both the form of their organization and the nature of their activities. The same emphasis is placed on the purely advisory functions of the committees and their complete exclusion from all matters affecting the contract of employment. Government representatives have been sent out to give advice on the establishment of committees and to see that these principles are not departed from. A central clearing-house for information is maintained at Washington. Committees in possession of suggestions which they consider particularly useful many send them to Washington where they are scrutinized by experts who, if they consider it desirable, will forward them to other plants throughout the country.

As in Britain, committees to stimulate production were first suggested by trade unionists but is is only recently that they have been widely accepted by management. On March 2, Donald M. Nelson, Chairman of the War Production Board, announced the inauguration of a War Production Drive. He proposed that the campaign be carried on through labour-management committees and he advocated that such committees be set up in all the war plants in the country. The presidents of both the American Federation of Labor and the Congress of Industrial Organizations endorsed the proposal.

On May 11, it was announced that 700 committees had been formed. The first major corporation to establish committees was Westinghouse which on March 14 agreed with the United Electrical, Radio and Machine Workers to set them up in all its plants. Other producers of electrical goods, including some of the plants of the Crossley and General Electric Corporations, have followed suit. Committees have also been set up in many aircraft plants, including Douglas Aircraft and Curtiss-Wright, and in several automobile plants engaged in producing tanks and other vehicles for war purposes. Iron and steel plants are also prominent in the list. Pennsylvania, with 130 committees on May 11, led all states; Ohio had 88, New York 79 and New Jersey 47.

The British Ministry of Labour and National Service has published Volume XXV in its series entitled *How Factory Accidents Happen* (price 6d. net at His Majesty's Stationery Office, London, England). The bulletin describes the manner in which certain accidents happened which were reported to Factory Inspectors. In a foreword to this issue of the series it is explained that the quarterly appearance of this publication had to be abandoned after September, 1939; however, it has been recommenced in view of many inquiries from those disturbed by the rapid growth of industrial accidents during the months of war. The present volume aims, in particular, at illustrating the types of accidents which are most common in wartime.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Unemployment Insurance Fund Over Fifty Million — Benefit Payments Nearing $100,000 Mark at End of May — Report of Employment and Claims Offices—Employment Conditions at End of May

AT the end of May, 1942, the Unemployment Insurance Fund amounted to $50,707,657.22, classified as to sources as follows:—

Unemployment Insurance Stamps	$24,902,570 44
Meter Credits	8,306,578 65
Bulk Payments	8,689,699 39
Government's Contribution	8,376,161 44
Interest on Investments	426,840 00
Contributions—Miscellaneous	5,770 41
Contributions—P.C. 7633	36 89
Total Receipts	50,707,657 22

Unemployment Benefit

By the end of May, the total amount paid by the Unemployment Insurance Commission to unemployed insured workers was $93,788.45. At the end of April the total payment amounted to $41,558.01. The benefit paid during the month of May, therefore, was $52,230.44. Payment of benefit commenced the latter part of February, 1942.

Report of Employment and Claims Offices for April, 1942

The volume of business transacted by Employment and Claims Offices of the Unemployment Insurance Commission during April, 1942, as indicated by the average daily placements effected, showed a gain of nearly 26 per cent, in comparison with that of the previous month, but a loss of 37 per cent, when compared with the records covering the corresponding period a year ago. Noteworthy advances over March were reported in services, manufacturing and construction, and much smaller increases in agriculture, transportation, trade, mining and finance. Logging, only, showed a nominal contraction. In comparison with April, 1941, heavy reductions were reported in construction and services, a more moderate decrease in agriculture and smaller declines in transportation and logging. Gains were reported in manufacturing, trade, mining and finance, the most marked of these being in manufacturing.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered each month at employment offices throughout Canada. It will be seen from the graph that the trend of the curves of vacancies and placements was upward during April, the levels at the close of the month standing at 80·2 and 58·1, respectively, in comparison with ratios of 61·5 and 46·9 in March, 1942, and with 68·6 and 62·7 in April last year.

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during April, 1942, was 1,742, as compared with 1,316 during the preceding month, and with 2,195 in April last year.

The average number of applications for employment received daily by the offices during the month under review was 2,172, in comparison with 2,140 in March, 1942, and with 3,200 during April, 1941.

The average number of placements made daily by the offices of the Commission during April, 1942, was 1,262, of which 883 were in regular employment and 379 in work of one week's duration or less, as compared with a total daily average of 1,003 during the preceding month. Placements in April last year averaged 2,008 daily, consisting of 1,243 placements in regular and 765 in casual employment.

During the month of April, 1942, the offices of the Commission referred 35,007 persons to vacancies and effected a total of 31,529 placements. Of these, the placements in regular employment were 22,063, of which 17,225 were male and 4,838 female, with placements in casual work totalling 9,466. The number of vacancies reported by employers was 28,097 for men and 15,437 for women, a total of 43,534, and applications for work numbered 54,297, of which 38,465 were from men and 15,832 from women. Reports for March, 1942, showed 34,200 positions available, 55,617 applications made and 26,062 placements effected, while in April, 1941, there were recorded 52,665 vacancies, 76,795 applications for work and 48,177 placements in regular and casual employment.

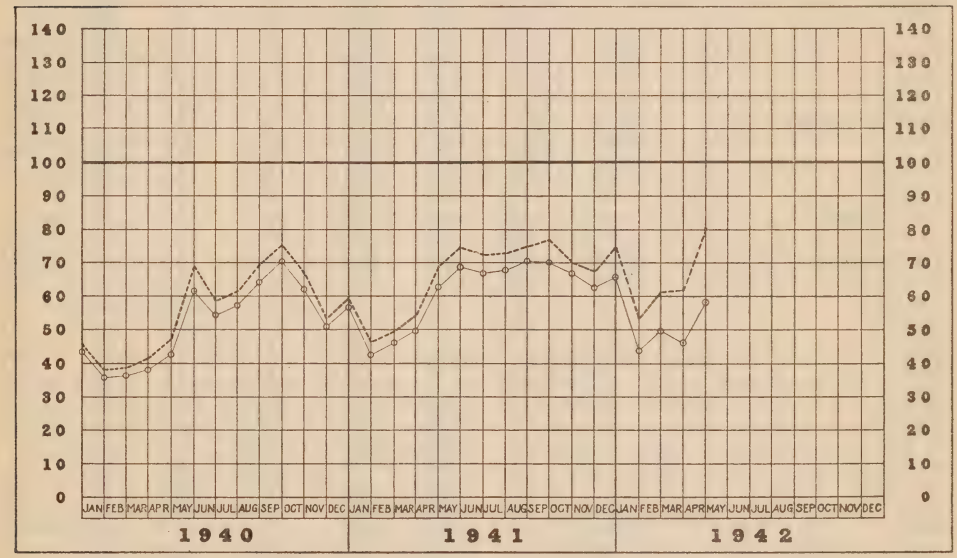
The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (4 months)	68,869	32,933	101,802

NOVA SCOTIA AND PRINCE EDWARD ISLAND

The demand for workers, as shown by orders listed at Employment and Claims Offices in Nova Scotia and Prince Edward Island during April, was nearly 3 per cent greater than in the preceding month and 26 per cent above the corresponding month last year. There was, however, a decline in placements of over 2 per cent when compared with March, but a gain of 17 per cent in comparison with April, 1941. The increase over April last year was mainly due to additional placements in manufacturing and construction, although this advance was partly offset by a fairly large reduction in services. Changes in other groups were small. Industrial divisions in which most of the placements were effected were:—Construction 1,081; services 1,009; manufacturing 499 and trade 100. During the month 1,727 men and 259 women were placed in regular employment.

NEW BRUNSWICK



Employment and Claims Offices in New Brunswick were notified in April of 55 per cent more vacancies than in the preceding month, but nearly 8 per cent fewer than during the corresponding period last year. Placements were 44 per cent higher than in March, but 22 per cent below those of April, 1941. The most marked change in placements from last April was a decline in services, only moderate improvement or slight curtailment being shown in all remaining industrial divisions. Industries in which employment was found for more than 100 workers included:—Services 474; construction 231 and transportation 108. There were 441 men and 70 women placed in regular employment.

QUEBEC

During April vacancies offered through Employment and Claims Offices in the Province of Quebec were 39 per cent above those of March, 1942, but 62 per cent lower than in April, 1941. There was also an advance in placements of 54 per cent when compared with March, but a loss of 74 per cent in comparison with the corresponding month a year ago. Heavy reductions in placements from last April reported in construction, services, logging and transportation were responsible for the decrease recorded, although small reductions, too, were shown in agriculture, manufacturing and trade. No noticeable gains were registered in any group. Placements by industrial divisions included:—Manufacturing 1,381; services 1,261; construction 1,258 and trade 238. Placements in regular employment numbered 2,577 of men and 911 of women.

* 1,390 placements effected by offices now closed.

ONTARIO

Employment opportunities, as indicated by orders received at Employment and Claims Offices in Ontario during April, were 27 per cent higher than in March, but fractionally below those of April, 1941. Placements were 19 per cent higher than in the preceding month, but 16 per cent fewer than during the corresponding period last year. Although additional placements over April a year ago were registered in all groups, except construction, services and agriculture, these increases were not sufficient to offset the declines previously mentioned, the two highest of which were in construction and services. Placements by industrial divisions included: Manufacturing 4,618; services 4,484; construction 1,873; logging 999; trade 751; transportation 476; agriculture 474 and mining 140. There were 7,416 men and 2,319 women placed in regular employment.

MANITOBA

Orders listed at Employment and Claims Offices in Manitoba during April called for 19 per cent more workers than in the preceding month and 26 per cent more than in the corresponding month last year. There was an increase of 22 per cent in placements when compared with March, but a loss of nearly 6 per cent in comparison with April, 1941. Declines in construction and agriculture, which were responsible for the adverse change recorded, were largely offset by gains in all other groups, the largest being in logging, manufacturing and trade. Industries in which most of the placements were effected included:—Services 1,087; logging 440; manufacturing 348; agriculture 240; construction 174 and trade 163. During the month 1,239 men and 330 women were placed in regular employment.

SASKATCHEWAN

Opportunities for employment, as shown by calls received at Employment and Claims Offices in Saskatchewan during April, were 27 per cent higher than in March, but nearly 6 per cent below those of April, 1941. Placements were 50 per cent in excess of those of the preceding month, but 26 per cent lower than in the corresponding period a year ago. The only changes of importance in placements from April last year were declines in agriculture and services. There was, however, a

moderate increase in trade. Placements under services numbered 701, agriculture 363, trade 126 and construction 104. There were 647 men and 182 women placed in regular employment during the month.

ALBERTA

There was a gain of 28 per cent in vacancies offered through Employment and Claims Offices in Alberta when compared with the preceding month, but a loss of nearly 10 per cent in comparison with the corresponding period of last year. Placements also were 42 per cent above those of March, but 22 per cent below April, 1941. Placements in agriculture, services and construction were less numerous than those of the corresponding month a year ago, the greatest decline being shown in agriculture, but of the advances reported in all remaining industries, none was outstanding, the majority of placements recorded being in the following industries:—Services 732; agriculture 558; construction 392; manufacturing 265; logging 124 and trade 116. During the month 1,540 men and 281 women were placed in regular employment.

BRITISH COLUMBIA

During the month of April, positions offered through the Employment and Claims Offices in British Columbia were 30 per cent higher than in March and 75 per cent in excess of April, 1941. Placements, however, declined nearly 4 per cent from those of the previous month and almost 5 per cent from the corresponding period a year ago. Reductions in placements from April last year, reported in construction, services and agriculture were largely offset by improvement in all other industries, the highest of which was in manufacturing. Divisions in which the majority of placements were effected included:—Services 1,340; manufacturing 799 and construction 684. Placements in regular employment numbered 1,638 of men and 486 of women.

Movement of Labour

During the month of April, 1942, the offices of the Unemployment Insurance Commission effected 22,063 placements in regular employment, 1,863 of which were of persons to whom was granted the reduced transportation rate, 1,168 proceeding to centres within the same province as the despatching office and 695 to other provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4, is granted by the railway companies to bona fide applicants at the employment offices who may desire to travel to distant employment for which no workers are available locally.

Quebec transfers at the reduced rate during April numbered 305, all of which were labourers bound for construction work in the district about Chicoutimi, the despatching points and numbers sent out being as follows:—Hull, 4; Montreal, 144; Quebec, 124; Rivière-du-Loup, 15; Sherbrooke, 4, and Val d'Or, 14. Business transacted by Ontario offices involved the issue of 815 certificates, 723 provincial and 92 interprovincial. Of the former, Cornwall sent to Pembroke, 8 construction labourers, and to St. Catharines, 4 foundry labourers; Kirkland Lake forwarded to Timmins 15 bushmen and to Welland 6 rolling mill hands, 3 inspectors, 2 bricklayers, 2 steel workers, one truck driver, one electrician's helper and 19 labourers; North Bay sent to St. Catharines 18 labourers; to Sudbury one cook and to Timmins 4 bushmen and one cook; Pembroke sent to Toronto 8 carpenters and to Sudbury 2 cookees, 3 millhands, 2 teamsters and one foreman. In addition, within the zone covered by its respective office, there proceeded from Fort William 138 bushmen, 23 river drivers, 6 cookees, 2 clerks, one cook and one foreman, and from Port Arthur 251 bushmen, 46 river drivers, 23 camp builders, 19 cooks, 15 cookees, 6 clerks, 5 carpenters, 5 foremen, 3 drillers, 2 blacksmiths, one teamster, and 49 labourers for the Hydro Electric and from Sudbury, 14 bushmen, 7 mill hands, 2 cookees, one cook, one waitress and one construction labourer. Interprovincial transfers were granted chiefly to men proceeding to Chicoutimi—one bricklayer going from Cornwall, 26 labourers from North Bay and 36 rock drillers, one well driller and 3 construction labourers from Kirkland Lake. Besides these, the last named office also sent 2 miners to Sherbrooke, London forwarded 6 bricklayers to Halifax and Sudbury despatched 17 construction labourers to Montreal. The movement of labour in Manitoba emanated entirely from Winnipeg and comprised the despatch of 488 workers—16 going to provincial situations and 472 to interprovincial. Within the province, 2 muckers journeyed to Flin Flon and 8 bushmen, 5 farm hands and one saw mill labourer to points within the Winnipeg zone. Workers travelling to locations outside the province were destined for the Port Arthur district and consisted of 398 bushmen, 15 cookees, 6 miners, 5 cooks, 4 carpenters, 2 muckers, 2 truck drivers, one tractor operator, one painter, one waiter, one tinsmith, one handyman, and 35 labourers for the Hydro Electric. In Saskatchewan, only 5 certificates were issued, 2 for farmhands going from Saskatoon to points within the jurisdiction of that office and 3 for bushmen from Saskatoon to Prince Rupert.

Taking advantage of the reduced rate in Alberta were 250 persons, 122 proceeding to provincial points and 128 to interprovincial, all of whom, with the exception of 7, were despatched by the Edmonton office. Of these, 119 journeyed to various sections of the Edmonton zone, there being 30 bushmen, 15 cooks, 11 fishermen, 6 muckers, 6 millhands, 4 stewards, 4 carpenters, 4 cookees, 2 deckhands, 2 stenographers, 2 miners, one electrician, one millwright, one fireman, one office assistant, one engineer, one prospector, one pumpman, one welder, one clerk, one cat skinner, one blacksmith, one kitchenmaid, one stevedore, one hoistman, one sawyer, one freight hand, one waitress, one farm hand, one purser and 14 labourers, while the number carried to Prince Rupert included: 48 bushmen, 27 millhands, 13 lumber pilers, 8 cooks, 7 cookees, 5 chainmen, 3 teamsters, 4 carpenters, 2 carpenter's helpers, 2 planer feeders, one fireman, one tractor driver, one farm hand, one blacksmith and one handyman for a saw mill. The remaining 7 persons to whom certificates were issued went from Calgary and were as follows: to points within its own territory, two muckers; to Edmonton, one clerk of works; to Prince Rupert, one rigger; to Vancouver, one improver and one boilermaker and to Niagara Falls, one millhand.

Of the 1,863 persons transferred at the reduced rate during April, 1,253 journeyed over the Canadian National Railways, 502 over the Canadian Pacific Railway, 95 over the Temiskaming and Northern Ontario Railway and 13 over the Northern Alberta Railway.

Employment Conditions at the End of May

Placement activities as reported by Employment and Claims Offices during the month of April, 1942, together with statistical summaries for that period are covered by an earlier section of this report. Later reports received from offices indicate that conditions at the end of May were as follows:—

Spring planting in Prince Edward Island and the Maritimes was well under way, although a shortage of farm labour was reported in all districts. The lobster season had opened and extra hands were being employed by fish packing plants operating at capacity. Logging concerns and incidental lumber milling companies were busy. Mines worked steadily and nearly all manufacturing plants operated on full time. Construction was active, except in a few cases, where building material was hard to obtain, National Defence projects, some of which were well advanced constituting the greater share of the work under way. Transportation was heavy and trade good. A steady demand existed for household workers in the women's division.

Ploughing and seeding in the province of Quebec were nearing completion, so that orders for farm help were fewer, but still difficult to fill. River driving was in progress and lack of experienced hands greatly handicapped bush operations. Skilled workers in mining also were in demand. Many manufacturing concerns were working to capacity, the metal trades being particularly busy; however, a fairly marked slackening was in evidence in the paper mills, some of which were working at only 70 per cent of possible production; elsewhere in industry, where staffs had been reduced, it was generally accounted for by shortage of material. An increased call was noticed for young factory hands, the majority of whom were uninterested, owing to the low salaries offered, consequently women were being employed in ever increasing numbers. Construction was active and consisted of work on wartime projects, dams, wharves, power line and plant erection; shipbuilding, likewise, was increasing in volume and here first-class tradesmen were needed. Transportation was brisk and trade favourable, but there was a definite shortage of available help for hotels, restaurants and domestic service.

Tobacco planting was in progress in Ontario throughout Brant and Norfolk counties. This was rather earlier than in previous years owing to the rapid growth of young plants under glass. There was also a steady increase in acreage under cultivation of soya beans. Spring grain was in excellent condition and while wet weather had been very prevalent, growth of crops was satisfactory. Farm help, however, remained scarce. In logging an acute shortage of labour existed, changes in crews continually taking place, as employees left to secure, elsewhere, more remunerative work; sawmills, however, were operating at capacity with all the men necessary. Although there was no surplus of experienced miners and additional men could easily be placed, many mines were able to fill requirements through a general movement of men from one mine to another. At Fort Frances, two peat-moss mines were taking on extra help, with plenty available. Manufacturing concerns were busy and while labour was not plentiful, nearly all industries were able to maintain normal production. Experienced men were needed for wood and iron shipbuilding, also skilled machinists, moulders, lathe operators, tool grinders and foundry help. Manufac-

turers engaged in restricted industry were finding it difficult to obtain employees and vacancies also existed for help with food, chemical and textile firms. Calls for female workers were increasing, particularly for machine shop work, for war industries and for textile mills. Considerable effort, therefore, was being made by technical schools to induce men and women of all ages to enroll for sponsored courses. Additions and alterations to plants engaged in war work were increasing and it was difficult to obtain skilled tradesmen especially electricians; deliveries of materials, however, still remained slow on some construction jobs. Numerous houses in various centres were in the course of erection for the Wartime Housing Commission. Railway and highway work was fairly well confined to maintenance, although extra gang labourers were rather scarce. The movement of grain and fruit by rail and lake continued heavy. Trade was good. Orders for domestic help remained unfilled, as women and girls preferred factory work.

With the greater percentage of sowing completed in the Prairie Provinces, requests for farm hands were fewer in number, although a steady demand still existed. A shortage of bushmen was apparent in Manitoba, while in Alberta, logging camps had been handicapped by flood conditions. Coal operators reported a substantial increase in orders, which resulted in the calling back to work of a number of miners. A light turnover existed in oil well labour and several new wells were being spudded in the Lethbridge district; activity, also, was being experienced near Fort McMurray, in respect to tar sand output, which appeared due for considerable increase in production. Clothing establishments, packing houses and soft drink factories were asking for additional help during the rush season and woollen mills, too, were very busy. Shortage of material, however, handicapped the iron industry, but requests were received for certified mechanics, machinists and steam engineers. Apart from dam and airport construction, projects for National Defence and the erection of residences, there were fewer calls for building labourers. Railway section men were requested, but applicants were somewhat reluctant to accept the wages offered. A number of vacancies existed for cooks and deck hands for the Northern transportation companies. Trade was steady. In the domestic section calls for female help for city and country were far in excess of supply.

Requests for orchard and farm help in British Columbia were becoming greater, with the number of suitable applicants decreasing, thus fruit growers were making arrangements to employ high school students during the summer vacation. It is estimated that the shortage of general farm hands in the Fraser valley exceeds 250 and some concern is felt regarding the harvesting of the large berry crop, which will require approximately 5,000 persons. Dairymen in that district also were needing men badly and it was reported that some of them were selling their herds for beef. Recent rains and warm weather had greatly benefited various districts; alfalfa in some localities being two feet high, while in others, considerable damage to vegetable acreage, as well as to property, had resulted from flood waters. The movement of labour to logging centres appeared normal, although there was a shortage of men; in consequence, yarding operations in some camps were hampered and machines lay idle. Sawmill operators, also, were seeking additional help; there was too, a sharp demand for miners and muckers for both base metal and gold. An upward trend was shown in calls for skilled artisans and common labourers in shipyards, with a continued scarcity reported of ships' platers and first-class welders, men being reluctant to accept labourers' jobs at the rate offered, preferring rather to wait and obtain employment as iron workers' helpers at a higher wage. Construction was under way, although here again lack of men was hampering progress, carpenters, electricians, etc., being required. Trade was brisk and female applicants not interested in household service.

The National Child Labour Committee, New York, has issued a bulletin entitled *Child Workers in Wartime*. It discusses the trend of child labour in the United States during 1941 and 1942 under the stimulus of war production among the subjects covered are: the increase in child labour, both legal and illegal; the exodus of boys and girls from high schools for jobs; whether the war effort requires child workers in industry or not; proposals to lower legislative standards; and projects, desirable and undesirable, for recruiting children and young people for agricultural work.

Copies of the report (10 cents each) may be obtained from the National Child Labour Committee, 319 Fourth Avenue, New York City, New York.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

IN view of the transference of the functions of the Employment Service of Canada to the Unemployment Insurance Commission, information formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will now be found in another article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for April, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of May."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting April 1, was 13,037, the employees on their payrolls numbering 1,652,810, compared with 1,651,067 (revised) in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 2,196, having an aggregate membership of 348,389 persons, 3·3 per cent of whom were without employment on May 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of April, 1942, as Reported by Employers

The upward movement indicated in manufacturing almost without interruption since the outbreak of war continued in force at the beginning of April; there were also general increases in employment in transportation, communications, services and retail trade. On the other hand, seasonal declines on a large scale were shown in logging; mining was also seasonally slacker and there was a considerable falling-off in construction. On the whole, employment showed a slight increase, whose significance was heightened by the fact that it was contra-seasonal. The 13,037 establishments furnishing returns to the Dominion Bureau of Statistics, reported a staff of 1,652,810 men and women, or 1,053 more than at March 1. The index number (1926=100) rose from 165·1 at that date, to 165·2 at the beginning of April. This was the maximum for April in the years since 1920. The latest figure was, however, slightly lower than the indexes indicated in the last quarter of 1941, being also fractionally less than at January 1 and February 1, 1942; with these exceptions, it was the highest on record. The April 1, 1941, figure had been 141·3.

In the experience of the years since 1920, employment on the whole has shown curtailment at the beginning of April, due in the main to the completion of the winter's operations in logging camps before the commencement of spring-time activity in many other lines of business. The latest advance in the all-industries index, as already stated, was contra-seasonal, with the result that the seasonally-adjusted index number, which had stood at 172·1 at March 1, rose to 175·0 at the beginning of April. This was a new all-time high.

The manufacturers co-operating in the survey for the first of April reported a personnel of 1,038,501; this was an increase of 19,218 persons from March 1, which brought the volume of employment in manufacturing to a new maximum. The greatest gains at April 1 were reported in the manufacture of iron and steel, chemical, textile, lumber and miscellaneous manufactured products, while vegetable food, tobacco and pulp and paper

plants were quieter. The losses were largely of a seasonal character.

The firms classified in the eight leading industrial groups—manufacturing, logging, mining, communications, transportation, construction and maintenance, services and trade—reported that on or about April 1, they had paid their employees $46,959,087 for services rendered in the week preceding. This was an increase of $845,331, or 1·8 per cent as compared with the sum of $46,113,756 disbursed by the same employers at March 1. The statistics including the figures for financial institutions show that the 1,716,261 persons in recorded employment at April 1 received a total payroll of $48,855,431 for services rendered in one week. This was a per capita average of $28.47, being 48 cents higher than the weekly average indicated at the beginning of March.

The 12,600 employers furnishing statistics for April 1, 1941, had reported an aggregate working force of 1,405,425 persons. The index had then stood at 141·3, while the figures for

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

the beginning of April in recent years of the record have been as follows:—1940, 111·9; 1939, 104·9; 1938, 105·0; 1937, 103·0 and 1936, 97·4. The 1926 average is used as the base in calculating these index numbers.

The Course of Wartime Employment

As stated in recent reports on employment and earnings, the value of any comparison of the volume in employment as presently existing with that indicated at the opening of the war has largely been nullified by the seasonal movements in industry from the early autumn to the late winter; industrial activity ordinarily reaches its peak for the year about September 1 or October 1, after which fairly continuous seasonal curtailment usually reduces employment in the first three or four months of the year to its lowest point in the twelve months. In view of these facts, the present comparison of the situation indicated at April 1, 1942, with that at September 1, 1939, is greatly abbreviated.

In the first thirty-one months of the war, employment in the Dominion has shown an extremely important growth; the interruptions in the generally upward movement have been wholly due to seasonal contractions in the industries particularly subject to such influences. These factors have recently reduced employment in a number of industries in both manufacturing and non-manufacturing classes,

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at April 1 and at Mar. 1, 1942, by Establishments furnishing Statistics, and Weekly Earnings of these Employees as Paid on or about April 1 and Mar. 1.

(Preliminary figures.)

Geographical and Industrial Unit	Number of Employees reported for		Aggregate Weekly Earnings Paid on or about		Average Per Capita Weekly Earnings Paid on or about

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table 111, with the exception of electric light and power.

* Revised.

but nevertheless, from September 1, 1939, to April 1, 1942, the general index has risen by 38·1 per cent. The magnitude of the gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the general index rose only by approximately 28 per cent.

The manufacturing industries have, for obvious reasons, shown a greater response to war-time demands than any other class. From September 1, 1939, to April 1, 1942, the index number of employment in factories rose by 72·9 per cent, while the general gain in the non-manufacturing groups, despite important seasonal curtailment in some branches notably (construction), was three per cent.

Particularly impressive expansion has been reported in the durable goods industries, in which the index number has advanced from 100·4 at September 1, 1939, to 232·3 at April 1, 1942, or by 131·4 per cent. The number of persons employed in this category constituted almost 53 per cent of all those reported in manufacturing at April 1, 1942, a proportion greatly in excess of that of 40 per cent engaged in the durable goods industries at the outbreak of hostilities. Employment in the non-durable goods class has also shown large gains during the period of the war, the index rising from 126·6 at September 1, 1939, to 174·4 at April 1, 1942. This was an expansion of 37·8 per cent. Activity in these industries is unusually relatively quiet during the winter, owing to seasonal slackening in certain divisions, notably the food group. In spite of this factor (which also operates in the case of some lines in the durable goods category) employment in the large majority of manufacturing industries was considerably more active at the latest date than it was at September 1, 1939.

In spite of the large seasonal losses recently recorded in construction and some other classes, employment in the non-manufacturing group as a whole was, as already stated, three per cent higher than at September 1, 1939. Seasonal changes in these classes are largely responsible for the decline in this rate of increase from 14·6 per cent at September 1, 1941, over September 1, 1939, when the seasonal factor did not complicate the comparisons. The following are the percentage increases in the index numbers in the indicated industries in the first thirty-one months of the war; logging, 246·1 per cent, mining, 4·2 per cent, communications, 16·6 per cent, transportation, 10 per cent, services, 13·9 per cent and trade, 13·4 per cent. In building, a contra-seasonal increase of 16 per cent as compared with September 1, 1939, largely resulted from wartime requirements. On the other hand, railway and highway construction showed declines of a seasonal character in this comparison; that in the highway division was, however, also due to the

present policy of postponing all but essential work until the conclusion of the war, while in 1939 a considerable program of road work had been undertaken for the relief of unemployment.

Statistics of Earnings

With the present tabulation, the Bureau's current record of payrolls goes into its second year, the first statistics of the kind in the Dominion having been collected with the employment data for April 1, 1941. However, the information received in the first two tabulations was incomplete, mainly because a considerable number of employers found it impossible to furnish the additional statistics without a period of preparation. The payroll figures obtained in the first two surveys are therefore not wholly com-

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

parable with those since tabulated, and have been disregarded. Comparisons with the corresponding period of last year will accordingly be made commencing only with the report for June 1. The statistics of the present report are subject to revision.

The 13,037 establishments furnishing information at the beginning of April reported the distribution of $46,959,087, in weekly salaries and wages to the 1,652,810 men and women on their staffs at that date. These same employers had reported 1,651,757 workers at the first of March, whose earnings in the week preceding had amounted to $46,-113,756. There was accordingly a gain of 0·1 per cent in the number of their employees at April 1, together with an increase of $845,331, or 1·8 per cent, in the aggregate payroll. The per capita average, at $28.41, was higher by 49 cents than the average of $27.92 paid at March 1. These two figures are the highest in the period of observation, considerably exceeding the previous maximum of $27.65 reported at February 1.

In the last report on employment and payrolls, the earnings of the 1,651,067 employees of the 12,923 establishments whose returns were then tabulated were given as $46,-093,114, paid on or about March 1 for services rendered in the last week in February. The per capita average based on these totals was also $27.92. The present report shows slight alterations in some of the figures previously issued, mainly as a result of the inclusion of late returns.

Table I contains a summary of the statistics for the provinces, the eight leading cities, and the main industrial groups, while in Table III appear data for a comprehensive list of industries in the Dominion. The statistics are subject to revision.

Index Numbers of Earnings.—Pending the establishment of a more satisfactory basic period for an index number of earnings, the statistics of payrolls reported at June 1 as having been paid for services rendered in the last week in May have been revised to serve as a starting point from which may be measured the current changes in the purchasing power distributed in salaries and wages by the establishments co-operating in the current surveys of employment and earnings. The employees of such firms constitute a large proportion of the total number of wage-earners engaged in industries other than agriculture, governmental, educational, domestic and personal service in the Dominion. The presentation of the payroll data in the form of an index number gives a clearer picture of the situation than can be obtained from the use of the current aggregate or average per capita figures. The latter especially are very considerably affected by the dilution of labour which has been a marked feature of the situation in recent months.

The recent movements of employment and earnings for the eight leading industries and in manufacturing as a whole, are shown for the Dominion in the following table; the index numbers of employment have been converted from their original base, 1926=100, to June 1, 1941, for comparison with the index numbers of payrolls.

The increase of 8 per cent in recorded employment since June 1 of last year has been accompanied by a gain of 21·6 per cent in the aggregate salaries and wages distributed by the co-operating establishments. The latest index of payrolls, at 121·6, is the maximum in the period of observation, slightly exceeding the previous high figure of 119·5 at December 1. The all-industries per capita average rose from $27.92 at March 1, to $28.41 at April 1. This increase partly resulted from the changes in employment

recently indicated; the losses recorded have taken place mainly in the industries in which the earnings are below average, while the indicated gains have been chiefly in the industries in which the earnings are relatively high. To some extent the increase in the per capita figure may therefore be of a seasonal character, although overtime work has been a factor in many cases. The changes recorded in the cost-of-living index in the first few months of 1942 have not sufficed to alter the rate of cost-of-living bonus as established late in 1941.

In the manufacturing division, the index numbers of employment and payrolls have shown especially large advances in the period for which data have been prepared. A rise of 18·7 per cent in employment since June 1, 1941, has been accompanied by a gain of 34·3 per cent in the aggregate payrolls distributed. The per capita figure, at $28.94 paid on or about April 1, is the highest yet recorded, representing an increase of $3.37 since June 1, 1941, in the weekly average. This increase, which is particularly impressive in view of the continued dilution of labour, partly represents the payment of higher wage rates over the ten months, and a more extensive use of the cost-of-living bonus, but is also partly accounted for by growing activity in the heavy manufacturing industries, together with overtime work. As already stated, the recent losses in employment in certain classes of manufactures, as in a number of non-manufacturing divisions, have taken place mainly in groups in which the average earnings are ordinarily lower than in the heavy manufacturing industries, a change in the composition of the total working force which has tended to raise the per capita average. Accordingly, it may be concluded that the more recently recorded increases in the per capita average for manufacturing as well as in the more general figures, are to some extent seasonal in character.

Earnings by Industries

Manufacturing.—The employees on the payrolls of the co-operating manufacturers throughout the Dominion, numbering 1,038,501, were paid $30,050,974 for their services in the preceding week. The same firms had employed 1,019,283 persons at the beginning of March, when they had reported the distribution of $29,133,269 in weekly earnings to their staffs. The increase of 1·9 per cent in the number of employees was accompanied by that of 3·2 per cent in the aggregate payrolls. The per capita weekly average accordingly also showed a considerable gain, rising from $28.58 received on or about March 1, to $28.94 at April 1. The latter is the highest per capita figure yet recorded in manufacturing as a whole.

A further important increase was indicated in the production of durable goods, in which the reported payrolls showed a relatively larger gain, employment in this class advancing by 3·1 per cent, while the weekly payrolls rose by 4·3 per cent since March 1. Where the index in the former has risen by 26·2 per cent since June 1, 1941, that of earnings has advanced by 46·1 per cent; this growth is partly due to overtime payments. In the non-durable products group, there was an increase of 0·6 per cent from March, while the earnings rose by 1·7 per cent. The index of employment in this class has risen by 12·4 per cent from June 1, 1941, while the increase in the payrolls has amounted to 22·5 per cent.

The highest earnings in the manufacturing classes were again those reported in the production of miscellaneous non-metallic minerals, largely petroleum products, with those in iron and steel plants coming in second place. The earnings in the pulp and paper, non-ferrous metal, electrical apparatus and beverage industries were also unusually high. These classes employ a large proportion of males, and require many highly skilled and experienced workers.

In general, the lowest per capita averages were reported in the tobacco, leather and textile groups, in which considerable numbers of females are employed; not only are the earnings in these categories affected by the sex distribution, but also by the age distribution of workers therein, since the female employees tend, in the main, to belong to the younger age groups. In comparing the earnings reported in various industries, it must be noted that the existence or the absence of overtime work is a factor of importance, while the employment of any considerable number of casual workers greatly affects the per capita earnings in any industry.

Logging.—Employment in logging showed a further seasonal decrease, amounting to 19·2 per cent, while the aggregate payrolls declined by 13·7 per cent. As a result of these changes the per capita weekly average showed a gain, rising from $18.97 paid at March 1, to $20.26 paid at April 1. The difference is largely due to the retention of the more highly paid workers as operations in many camps drew to a close. It must again be mentioned that the figures of payrolls given in this report make no allowance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

Mining.—There was a reduction of 0·8 per cent in employment in mining, in which the reported aggregate of earnings decreased by less than a tenth of one per cent. The statistics show that 81,762 persons were paid $2,870,888 at April 1; this was a per capita figure of $35.11. The average pay envelope of those employed at March 1 had contained $34.84.

Communications.—In communications there was an increase of 1·6 per cent in employment, while the reported payrolls rose by 2·8 per cent. Accordingly, the average earnings showed a further advance, rising from $27.68 stated at March 1, to $28.02 paid at April 1.

Transportation.—The transportation industries reported an aggregate working force of 124,721 men and women at April 1, when the weekly earnings distributed amounted to $4,319,807. The former figure was higher by 1·5 per cent than that at March 1, while the payrolls increased by 1·3 per cent. The average earnings were rather lower, the per capita figure being $34.64, compared with the revised average of $34.71 paid at March 1.

Construction.—Further seasonal losses were indicated in construction, in which the personnel declined by 5·5 per cent, and the aggregate payrolls in the group as a whole by 0·8 per cent. There were contractions in employment in building, highway and railway construction and maintenance; the weekly payrolls reported in building were rather higher, but those in highway and railway work were lower. The per capita average earnings gained in each of the three divisions, with the release of workers in the lower-paid groups; in the industry as a whole, the average earnings rose from $25.28 at March 1 to $26.53 at April 1.

Services.—The service establishments furnishing returns reported 2·2 per cent more employees, with an increase of much the same size in the reported payrolls. The average earnings, therefore, showed practically no change, being $16.98 at April 1, as compared with $16.99 at March 1. These averages are lower than in any other industrial group, partly because of considerable proportions of female and part-time workers, and partly because the earnings quoted exclude the value of board and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some 60 per cent of those reported in the service industry.

There was a gain of 0·8 per cent in the employees indicated in trade, in which the aggregate payrolls distributed were greater by 1·7 per cent. The per capita earnings were therefore somewhat higher, rising from $23.84 at March 1, to $24.06 at April 1.

In the financial group, 63,451 men and women were reported to have been paid $1,896,344 at April 1, a per capita average of $29.89. In the last return, their employees had aggregated 63,363, and the weekly earnings were given as $1,893,527, an average of $29.88 per person. The inclusion of the data for financial organizations raised the general per capita figure of earnings in the Dominion to $27.99 at March 1, and $28.47 at April 1. Without the statistics for the financial group, the weekly average at the former date was $27.92, and at the latter, $28.41.

Earnings by Provinces

Firms in Prince Edward Island and New Brunswick reported reductions in employment and in the aggregate weekly payrolls disbursed. However, the general per capita averages in these provinces were higher. There was also a falling-off in the number employed in Quebec and Alberta, but the reported aggregates of salaries and wages were greater than at March 1, accordingly, the average earnings in each showed an increase. In the remaining provinces, the indicated staffs and the disbursements in weekly payrolls were higher at April 1. In Nova Scotia, Ontario, Manitoba and British Columbia, the contents of the average pay envelope were rather greater at April 1 than at March 1, but in Saskatchewan there was a decline in the per capita figure.

Preliminary data on employment and earnings for a number of industries in the economic areas are given in Table 1. Manufacturing again reported increased employment in each of the areas, accompanied by proportionately larger advances in the weekly wage payments, so that the average per capita earnings generally advanced. Except in the Maritime Provinces, the number of employees and the total payrolls in transportation also showed gains; improvement was general in trade. Logging, except in British Columbia, reported seasonal curtailment in the personnel and in the wage disbursements. The trends of employment and earnings in the remaining non-manufacturing classes in the various areas were mixed.

Earnings by Cities

The total payrolls disbursed at April 1 by the firms co-operating in the eight leading cities for which statistics are tabulated were higher than at March 1. In seven of these, the per capita figures were also greater, Quebec being the exception. As in the provinces,

the general trends in manufacturing were upward, while there was variation in the movements in other industrial divisions within the cities.

Table I gives statistics of employment and earnings for leading industries in the eight cities whose returns are segregated each month.

Employment by Economic Areas

Industrial activity increased in five provinces at April 1, the trend being upward in Nova Scotia, Ontario, Manitoba, Saskatchewan and British Columbia. The largest gains were in British Columbia. In Prince Edward Island, New Brunswick, Quebec and Alberta, however, the tendency was downward. The general level of employment was higher than in any other spring for which data are on record.

Maritime Provinces.—There was a seasonal decrease in the Maritime Provinces as a unit. A falling-off was indicated in Prince Edward Island and New Brunswick, while improvement was noted in Nova Scotia. The 936 co-operating employers reduced their payrolls from 119,245 persons at March 1, to 116,439 at the beginning of April. Logging showed a decided seasonal contraction, over 3,000 men being released from bush work; transportation and railway construction and maintenance also showed curtailment. On the other hand, manufacturing reported substantial gains, mainly in the animal food, lumber, pulp and paper, chemical and iron and steel divisions. Mining, building and highway construction and maintenance, and retail trade also showed advances. Employment generally was decidedly brisker than at the beginning of April, 1941, when an advance had been noted; statements for April 1 of last year were received from 886 firms employing 101,415 workers, 558 more than at March 1, 1941.

Quebec.—Manufacturing, communications, transportation, services and trade recorded heightened activity in Quebec; the unusually large gains in manufacturing extended to many industrial divisions, being most pronounced in the iron and steel, chemical and textile groups. Tobacco plants, however, were slacker. There were large seasonal losses in logging, and construction also released employees. The general tendency in Quebec was downward, according to data tabulated from 3,282 establishments with 516,086 employees, as against 521,247 at March 1. The index, at 176·8 at April 1, 1942, was many points higher than at the same date of last year, when increased activity had been indicated. The trend has been retrogressive in eighteen of the twenty-one preceding Aprils for which information is available; the decline at the latest date was therefore seasonal in character.

At April 1, 1941, statistics had been furnished by 3,117 employers, whose payrolls had included 413,456 men and women.

Ontario.—Employment showed a further moderate advance in Ontario, where 5,624 firms had enlarged their forces by 1,516 workers since the preceding report, bringing them to 709,567 at April 1. A gain had also been registered by the 5,399 establishments making returns for the same date in 1941; their staffs had aggregated 615,118. The index of employment then stood at 152·0, compared with 174·8 at the latest date. The experience since 1920 shows that activity customarily declines in Ontario at the beginning of April, there having been curtailment of operations in seventeen of the twenty-one previous years for which data are available; the advance at the date under review was therefore contra-seasonal.

Manufacturing reported heightened activity as compared with the preceding month, the most marked improvement being in iron and steel plants. The trend was also favourable in the lumber, chemical, textile, electrical apparatus, non-ferrous metal and other divisions. On the other hand, food, printing and publishing, rubber and tobacco factories were slacker. In the non-manufacturing industries, mining, communications, transportation, railway construction and maintenance and retail trade showed some expansion. Logging, however, released a large number of men as the season's operations drew to a close, and building and highway construction were also quieter.

Prairie Provinces.—Employment in the Prairie Provinces as a whole advanced moderately at April 1; the gain was contra-seasonal. The Prairie index, at 127·2 at the latest date, was 10½ points above that at April 1, 1941, previously the maximum for April. Firms in Manitoba and Saskatchewan reported improvement at the beginning of April of the present year, while a falling-off was shown in Alberta. An analysis of the returns by industry shows that most of the increase in the Prairie Provinces as a whole was in construction and manufacturing. Smaller gains were indicated in transportation and services, while logging and coal-mining were slacker. The working forces of the 1,817 co-operating employers aggregated 172,158 persons, compared with 170,637 at March 1.

The establishments furnishing information on employment at the same date of last year had numbered 1,789, with a personnel of 157,538.

British Columbia.—Further expansion of a seasonal character was indicated in British Columbia, according to returns tabulated by the Bureau from 1,377 firms with 138,560 employees, or 5,983 more than in their last report. The increase exceeded the average at April 1 in previous years of the record, but was smaller than that gain reported at the same date of last spring. The indicated volume of employment was greater than at April 1 of 1941, or of any other year of the record. There was a large advance at the date under review in manufacturing; this took place mainly in the iron and steel division, but lumber mills were also busier. Logging, construction and trade also afforded more employment.

At the beginning of April of last year, the 1,305 co-operating establishments had reported 117,898 employees.

Table II gives index numbers by economic areas.

Employment by Cities

Industrial activity increased in each of the eight centres for which employment data are segregated, viz., Montreal, Quebec City, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver. The largest proportionate gains were in Quebec City and Vancouver, while those in Ottawa and Winnipeg were nominal. Employment in each of these cities reached a new all-time high at the beginning of April.

Montreal.—There was a further upward movement in Montreal, according to 1,903 firms who reported 243,290 persons on their payrolls, as compared with 237,964 at March 1. This increase, which was seasonal in character, was above the average for April 1 in earlier years of the record, although it was exceeded by the gain indicated at the same date in 1937 and in 1941. Manufacturing generally showed marked improvement at April 1, 1942, from the preceding month; textile and iron and steel plants reported the greatest expansion. Transportation, services and trade also afforded rather more employment, while construction was quieter. The 1,807 establishments from which returns were received for April 1, 1941, had reported 200,508 employees, compared with 194,723 in the preceding month; the index then was some 26 points lower than that of 160·3 at the beginning of April, 1942, when a new maximum was established.

Quebec.—Manufacturing, services and trade showed heightened activity in Quebec City, the advance in manufacturing being outstandingly large. There was an increase of 1,182 persons in the working forces of the 225 employers making returns, who had 29,034 on their payrolls at April 1. A smaller gain had been indicated by the 216 firms co-operating at the beginning of April in 1941, whose staffs aggregated 20,839; the index was then decidedly lower than that 207·8 at the latest date.

Toronto.—Toronto firms reported considerable improvement over the preceding month. Expansion in activity is usually indicated at the beginning of April; the latest increase, however, was above normal for the time of year. Most of the betterment took place in manufacturing, but smaller gains were made in services, trade and transportation. Within the manufacturing division, there were pronounced increases in iron and steel and miscellaneous manufacturing plants, with smaller advances in electrical apparatus, non-ferrous metals and textiles. On the other hand, the food, printing and publishing and paper products and some other classes were slacker. The working forces of the 1,966 employers furnishing statistics totalled 224,651 persons, compared with 221,458 at March 1. Employment in Toronto in recent months has reached successive new all-time highs; the latest index was 174·8, compared with 172·3 at March 1. At the first of April, 1941, the figure had been 145·4. Data were then received from 1,870 firms, whose staffs had included 186,668 men and women.

Ottawa.—Little general change was indicated in Ottawa; there were moderate gains in manufacturing, particularly of iron and steel products, and in trade, but construction was rather quieter. An aggregate staff of 20,635 workers was employed by the 249 establishments whose statistics were tabulated, and who had 20,609 in their last report. The index, at 156·6 was much higher than that of 142·3 at the same date of last year, when an increase had also been recorded. Statements had then been compiled from 237 firms with 18,709 workers.

Hamilton.—Manufacturing showed further expansion, particularly in the iron and steel division. Trade also afforded more employment. In construction, however, the trend was downward. Returns were tabulated from 344 employers with 59,272 persons on their paylists, or 296 more than at March 1. The level of employment reached a new maximum, the index rising from 180·6 at March 1, 1942, to 181·5 at the date under review. A greater gain had been indicated by the 334 establishments furnishing returns for April 1, 1941; their payrolls had included 49,341 men and women.

Windsor.—The movement in Windsor continued decidedly favourable, according to data received from 204 firms employing 36,264

workers, as against 35,507 at the beginning of March. Manufacturing was more active, especially in the iron and steel division, and trade showed some improvement. Employment generally was in greater volume than in any other month of the record. The 197 concerns reporting for April 1, 1941, had provided work for 30,391 persons.

Winnipeg.—Industrial activity showed little general change in Winnipeg, the staffs of the 560 establishments furnishing statistics aggregating 53,122, as compared with 53,107 in the preceding month. Manufacturing was brisker, particularly in the iron and steel division, and services showed a small gain. The other non-manufacturing classes, however, were rather slacker. An upward movement had been noted at April 1, 1941, when information had been received from 549 employers with a personnel of 47,868; the index was then decidedly lower, standing at 114·8, as compared with 127·4 at the same date under review. The latter figure is the highest for April in the period of observation.

Vancouver.—Improvement was recorded in Vancouver, according to 602 firms with a staff of 62,946, as compared with 60,330 in the preceding month. Many industrial divisions showed expansion, that in manufacturing being most pronounced; the greatest gains were made in iron and steel plants. Construction and trade also reported considerably heightened activity. A larger increase had been indicated at the beginning of April of last year, but employment in that city was then at a lower level. The index stood at 177·9 at the latest date, compared with 139·9 at April 1, 1941, when the 576 co-operating establishments had reported 47,570 men and women on their paylists.

Employment by Industries

Manufacturing.—Employment in manufacturing continued to expand. The gains were seasonal in character, but were on a scale considerably above the average in the experience of the years since 1920; the number of persons added to the reported working forces has only once been exceeded in the twenty-one earlier years of the record. The Dominion Bureau of Statistics tabulated returns from 7,250 establishments which employed 1,038,501 operatives at the latest date, as compared with 1,019,283 at the beginning of March. The April 1 index (1926 = 100), stood at 199·4, as compared with the previous high of 195·7 at March 1, 1942, and 158·2 at April 1, 1941.

Since the advance at the date under review was above average, the seasonally adjusted index showed a further increase, rising from 199·9 at March 1, 1942, to 201·1 at the latest date. These two figures are the highest so far recorded.

The greatest additions to the personnel at the date under review were again reported in iron and steel products, which employed some 11,900 more workers than at March 1; the increases in shipbuilding, aircraft and firearm manufacturing were particularly large. There were also important gains in lumber, woollen, garment, chemical, non-ferrous metal, miscellaneous manufactured products, electrical apparatus and machinery and other divisions. On the other hand, tobacco, vegetable food, printing and publishing and rubber plants were slacker. In some cases, the losses were seasonal.

The following are the unadjusted index numbers in manufacturing at April 1 in recent years, based on the 1926 average as 100:—1942, 199·4; 1941, 158·2; 1940, 123·4; 1939, 107·1; 1938, 110·8; 1937, 110·8 and 1936, 101·1.

The 6,866 manufacturers furnishing statistics for April 1, 1941, had employed 821,669 workers, a substantial increase in comparison with their staffs in the preceding month.

Logging.—Continued and larger losses of a seasonal nature were noted in logging camps, 478 of which reduced their personnel from 76,631 men at March 1, to 61,931 at the date under review; the percentage decline was rather below average, according to the experience of preceding years of the record. The most extensive curtailment at the beginning of April was in Quebec, but the movement was also downward in Ontario and the Maritime and Prairie Provinces. In British Columbia, on the other hand, considerable improvement was noted. The seasonal contractions reported at the same date of last year had involved the release of a smaller number of workers, but the index then stood at 166·2, many points below the April 1, 1942, figure of 208·7.

Mining.—Coal-mining showed a decrease on the whole; there was no general change in the metallic division, while a moderate gain was indicated in quarrying and in the extraction of other non-metallic minerals. Four hundred and twenty-four mine operators reported 81,762 employees, compared with 82,447 at the beginning of March. The level of employment in this group approximated that indicated at the same date in 1941, but was higher than at April 1 in any preceding year for which statistics are available.

Communications.—Information was received from 61 communications companies and branches employing 27,189 workers, or 428 more than in the preceding month. Telephones and telegraphs both reported increased activity. The index number stood at 101·8 at the latest date, or 8·4 points higher than at April 1, 1941, when the trend had also been favourable.

Transportation.—Employment in transportation advanced at the beginning of April, when the shipping, steam railway and street railway, cartage and storage divisions showed improvement. The working forces of the 557 co-operating employers aggregated 124,721 persons, compared with 122,836 in the preceding month. A larger increase, on the whole, had been noted at the beginning of April of last year, but the index was then nearly five points lower than the latest figure of 99·0.

Construction and maintenance industries reported a further seasonal decline at April 1, there being curtailment in the building, highway and railway branches. Statistics were tabulated from 1,459 contractors with 123,204 employees, or 7,165 fewer than in their last return. An upward movement had been indicated at the beginning of April of 1941, when the index of employment in construction was slightly higher than that of 98·0 at April 1, 1942.

Services.—Employment in hotels and restaurants showed continued activity, and laundries and dry-cleaning establishments were also busier. The 614 firms co-operating in the service division reported 38,491 employees, compared with 37,673 at March 1. The trend had also been favourable at the beginning of April, 1941, when the index was some 14 points lower.

Trade.—There was a moderate increase in the aggregate forces of the 2,194 co-operating wholesale and retail establishments, which employed 157,011 workers at April 1, as compared with 155,757 at the beginning of March. The advance which was seasonal in character, approximated the average for the time of year. The index, at 153·0, was rather higher than that of 149·1 at April 1, 1941, when greater improvement had been noted.

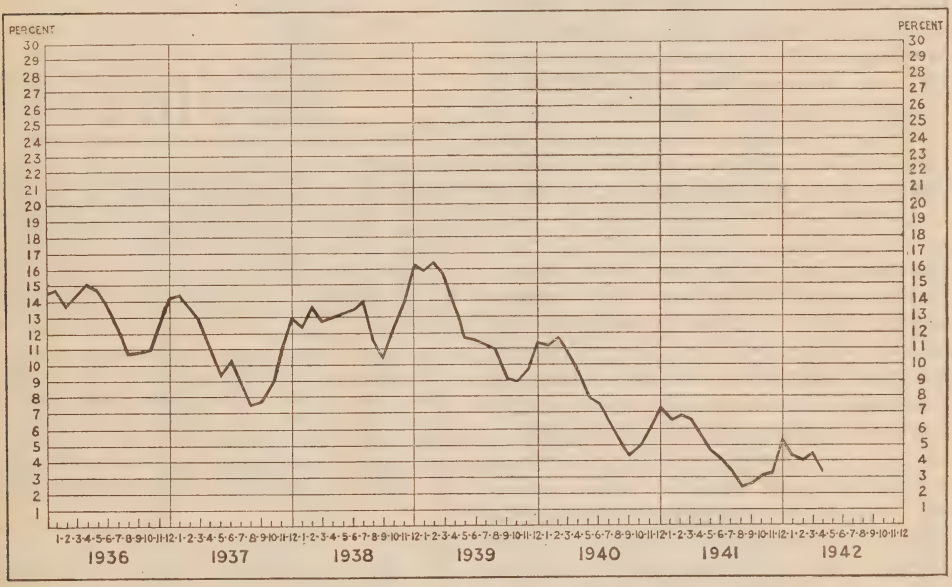
Finance.—At the beginning of April, 762 institutions reported staffs aggregating 63,451 persons, compared with the 63,363 in the preceding month; the index number was 122·9, as compared with 122·7 at March 1, and 115·7 at April 1, 1941. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the latest survey of employment to 1,716,261 in 13,799 establishments, and lowers the index of 165·2 in the industries above enumerated, to 163·1; when the number employed by the co-operating financial institutions was added to the general figures for March 1, the index was lowered from 165·1 to 163·0. The comparable figure for April 1, 1941, was 140·1, that in the eight industries above enumerated having been 141·3.

Table III gives index numbers by industries.

Unemployment in Trade Unions at the close of April, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only, to the organization reporting.

There were 2,196 reports tabulated at the end of April. The organizations reporting had a combined membership of 348,389 persons, of whom 11,654 or a percentage of 3·3 were without work; most of these members had been laid off temporarily. The percentage of unemployment at the close of the previous month was 4·5 and at the end of April, a year ago, it was 5·5.



The substantial employment advance in April over the preceding month was due in part to the seasonal improvement of employment among members in the building and construction trades. As will be seen in Table II which accompanies this article the percentage of unemployment among these members in April was 12·5, a decrease of 3·8 per cent over the previous month. A substantial expansion in employment was also observed in the manufacturing industries, in which the unemployment percentage was reduced from 3·1 in March to 2·4 per cent in April, and in the transportation industries in which 1·5 per cent of the members were without work in April, in comparison with 2·7 in the preceding month. More favourable conditions prevailed also, among the smaller memberships; fishermen reported a noteworthy increase in work, the percentage of unemployment standing at 12·5, as against 21·6 in March. Among lumber workers and loggers the percentage of members out of work stood at 3·7; this was a moderate employment expansion over the preceding month.

In Table I, which shows the percentages of unemployment in trade unions by provinces, it will be observed that the figures ranged from 1·4 per cent of unemployed members in British Columbia to 6·1 per cent in Alberta. Noteworthy improvement was in evidence in Quebec, unemployment declining from 4·5 per cent in March to 3·0 per cent in April, while in Saskatchewan there was a substantial employment increase, the percentage of those

without work in April being 2·1, as against 3·8 per cent in the preceding month. Moderately better conditions also prevailed in Ontario and British Columbia. Fractional employment advances were apparent in Nova Scotia, New Brunswick and Alberta, while in Manitoba the percentage of members out of work was 4·0, which was identical with that recorded in March. In comparison with the situation at the end of April, a year ago, there was marked improvement in Quebec, Alberta and British Columbia. In Quebec the percentage of unemployment declined from 8·0 in April, 1941, to 3·0 in the month under review, while in Alberta the percentage of unemployed members stood at 6·1 as against 12·6 in April a year ago. Conditions in British Columbia improved by over 4 per cent and fair employment advances were observed in Nova Scotia and Saskatchewan; in New Brunswick and Manitoba there were fractional increases in work afforded. On the other hand, conditions in Ontario declined from 3·1 per cent of unemployment in April, a year ago, to 4·4 per cent at the end of April, 1942.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployment in these cities, ranged from 1·0 per cent in Saint John to 6·4 per cent in Edmonton. In Montreal, Toronto and Edmonton there was appreciable improvement. In Montreal, the percentage of members who were without work stood at 2·0 as against 3·9 per cent in March, while in Toronto the percentage of unemployment was 4·1, compared with 5·9 per cent in the previous month; the comparative figures in Edmonton were 6·4 and 8·1 per cent, respectively. Fractional improvement was observed in Saint John and Vancouver. Employment in both of these cities remained high, there being less than 2 per cent of the members reported out of work in either case. Conditions were also very good in Halifax, although there was a fractional decline in work available. In Winnipeg the percentage of unemployed members stood at 4·4 and in Regina, it was 4·7. These percentages were fractionally higher than those registered in the preceding month. In comparison with the situation in April, a year ago, Halifax members reported an unemployment percentage of 1·3, which indicated a marked expansion in available work over April, 1941, when 5·7 per cent of these members were unemployed. Noteworthy improvement was apparent, likewise, in Montreal and Vancouver. In Saint John and Edmonton there were fractional employment increases while very slight contractions in work available were observed in Winnipeg. In Toronto the percentage of members out of work, in April, 1941, stood at 2·4, as against 4·1 per cent of unemployment in April, 1942. In Regina the unemploy-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ment percentage increased from 2·7 in April, a year ago, to 4·7 in the month under review.

The chart which accompanies this article illustrates the trend of unemployment from January, 1936, to date. The curve of unemployment in April, 1942, rested at a moderately lower level than in the preceding month, thus denoting a moderate expansion in the volume of work available. The point of the curve was at a substantially lower level than that shown in April, 1941, however, thus reflecting a noteworthy expansion in employment during the period under survey.

There were 699 reports received from unions in the manufacturing industries. These organizations had a total membership of 173,124 persons, of whom, 4,163, or a percentage of 2·4 were without work compared with percentages of 3·1 in March and 2·7 in April, 1941. In comparison with the preceding month a very much higher employment level was in evidence among fur workers the percentage of unemployed members standing at 10·6 compared with 28·6 per cent in March. A moderate employment increase was noted among members in the iron and steel trades, there being but 3·0 per cent out of work in April as against 3·6 per cent in the previous month. Somewhat improved conditions were reflected among leather workers and general labourers, although in the latter group the percentage of unemployment remained high. Fractional increases in work were manifested, also, among papermakers, printing pressmen, woodworkers and garment workers. There was very little unemployment among the members in these groups. Textile and carpet workers were fractionally better employed while among bakers and confectioners the same fractional percentage of unemployment was shown as in March. As in the preceding month, cigar and tobacco, soft drink workers, electric current employees, hat, cap and glove workers, butchers, meat and fish packers, rubber workers, jewellery workers, mine mill and smeltermen and gas workers reported that their members were fully employed. On the other hand, among metal polishers the percentage of unemployment stood at 2·4 compared with 0·5 per cent in March. Among tailors, whose membership is not large, there was a substantial decline in available work, the percentage of unemployment standing at 21·3 as compared with 11·0 per cent in the previous month. In comparison with the situation at the close of April 1941, garment workers, leather workers and printing pressmen recorded much higher employment levels. While better conditions, although the changes were not outstanding, were apparent among bakers and confectioners, papermakers, woodworkers, textile and carpet workers and butchers, meat and fish packers.

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1931.....	8·5	9·2	19·3	17·2	15·7	15·6	19·4	17·6	16·8
Average 1932.....	9·6	14·4	26·4	23·7	20·0	15·8	22·6	21·6	22·0
Average 1933.....	16·0	13·0	25·2	24·4	20·3	17·2	21·7	20·8	22·3

Reports were tabulated from 54 unions of coal miners, having a total membership of 21,127 persons, of whom, 1,056, or a percentage of 5·0 were without work in comparison with 4·5 per cent in March, 1942, and 10·4 per cent in April, a year ago. Compared with the preceding month, appreciable expansion in available work was observed in British Columbia, there being very little unemployment. Very slight contractions in work were observed in Nova Scotia and Alberta. In the former province the unemployment percentage increased from 1·4 per cent in March to 2·3 per cent at the close of April, while in Alberta, in this period, the percentage advanced from 12·6 to 13·3. As in March, New Brunswick unions reported that the members were fully employed. In comparison with the situation in April, 1941, there were marked employment increases in both Alberta and British Columbia. In Alberta the percentage of those who were without work declined from 29·3, a year ago, to 13·3 per cent, in April, 1942, while in British Columbia the decline in this period was from 20·9 to 0·2 per cent. In New Brunswick, the union members were fully employed at both dates; in Nova Scotia there was a fractional decrease in work.

In the building and construction trades there were 240 reports tabulated. The combined membership of these returns was 33,949 persons, of whom 4,243, or a percentage of 12·5 per cent were unemployed, in comparison with 16·3 per cent in March and 15·2 per cent in April, 1941. In comparison with March, painters, decorators and paperhangers were much better employed; in that month, 10·2 per cent of the members were reported as being out of work, while in April this percentage declined to 2·5. Although conditions were still rather quiet among granite and stonecutters, the percentage reported as being unemployed standing at 20·8, these members recorded marked improvement in April over March, when 42·3 per cent were without work. Among the large membership, carpenters and joiners reflected pronounced betterment, unemployment dropping from 18·6 to 13·7 per cent. Although not many members were involved, a substantial improvement occurred among steam shovelmen, the percentage of unemployment declining in this group from 19·8 in March to 10·7 per cent. Although over 30 per cent of the membership of bricklayers, masons and plasterers were reported as being without work, the situation showed a slight improvement during April. Bridge and stuctural iron workers were also slightly better employed while plumbers and steamfitters, whose unemployment percentage stood at 7·7, showed a fractional advance in available work. On the other hand, although reporting very few as being out of work, electrical workers, indicated a very slight reduction in employment. Among tile layers, lathers and roofers the percentage of unemployed members increased from 32·8 in March, to 36·4 per cent in April. In comparison with the situation reported at the end of April, 1941, carpenters and joiners and granite and stonecutters indicated pronounced employment increases. Steam shovelmen, likewise, were better employed, although there were not many members involved in this change. The percentage of unemployment among bridge and structural iron workers stood at 5·6 as compared with 10·6 per cent in April, a year ago. Work available for hod carriers and building labourers declined slightly, while, although but few members were involved, tile layers, lathers and roofers recorded a rather marked employment recession, the percentage of those out of work in this group standing at 36·4 in comparison with 15·9 per cent in April, 1941.

There were 877 returns received from unions in the transportation industries. The total membership was given as 78,338, of whom 1,178, or a percentage of 1·5 were unemployed, in comparison with percentages of 2·7 in March and 3·6 in April, 1941. Among steam railwaymen, whose membership includes approximately 80 per cent of the entire group membership, employment advanced to a very high level, the percentage of those without work being 1·6, in comparison with 3·0 per cent in March. With the re-opening of the season, conditions among navigation workers showed appreciable improvement, as reflected in the unemployment decline from a percentage of 13·9 to 7·4. No change in the unemployment percentage was shown for street and electric railway employees, among whom there was very little unemployment. Teamsters and chauffeurs were reported as fully employed, compared with 1·7 per cent of the membership reported as out of work

in the previous month. In comparison with conditions in April, a year ago, navigation workers manifested marked betterment, while a much higher employment level was observed among steam railway employees. Fractional improvement only, was in evidence among teamsters and chauffeurs, while among street and electric railway employees there was a very slight employment recession.

Returns were received from 10 unions of retail shop clerks. The total membership was 3,179 persons. These were fully employed, as in the previous month, and in April, a year ago.

Reports were tabulated from 99 unions of civic employees, whose combined membership was 10,094 persons. Of these, 12, or a percentage of 0·1 were unemployed, in comparison with 0·4 per cent in March and 3·4 per cent in April, 1941.

From unions in the miscellaneous group of trades there were 150 reports tabulated. The total membership was 11,509 persons, of whom, 121, or a percentage of 1·1 were without work, compared with 1·2 per cent in the preceding month and 4·6 per cent in April, a year ago. A noteworthy employment advance over March was shown by theatre and stage employees, in which group the employment percentage was 2·7 as against 4·1 in that month. Among hotel and restaurant employees and barbers unemployment was but fractional. Very slight improvement was manifested among these workers, while among unclassified members the percentage of those who were without work remained, as in March, at 0·1. Stationary engineers and firemen reported that 1·4 per cent of their membership was unemployed, while in March this percentage was 1·3. In comparison with April, 1941, much higher employment levels prevailed for hotel and restaurant, theatre and stage employees and stationary engineers and firemen; among barbers and unclassified workers there were fractional employment increases.

Reports were received from 4 unions of fishermen. The total membership was 1,627, of whom 204, or a percentage of 12·5 were without work, compared with 21·6 per cent in March and 14·0 per cent in April, 1941.

Returns were tabulated from 3 unions of lumber workers and loggers. The combined membership was 2,593. Of these, 97, or a percentage of 3·7 were unemployed, compared with 7·4 per cent in both the previous month and April, a year ago.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1931 to 1941, inclusive, and also, the percentage of unemployment for April of each year from 1931 to 1940, inclusive, and for each month from April, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Building Permits Issued in Canada during April, 1942

The April report of building permits compiled by the Dominion Bureau of Statistics includes returns from 171 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 161 reported detailed operations. The remaining 10 advised that no permits had been issued during the month of April while 33 municipalities had failed to report at the close of May 12.

The total value of permits reported as issued in the month of April is $10,975,550. Revised values for the month of March include returns from 202 municipalities and aggregate $6,972,081. Reports were received from 55 of the 58 original municipalities and show a value of $8,865,937 for April. The corresponding revised value for March includes 58 returns and is $5,707,622, while the April, 1941, value was $12,552,258.

The total value of permits issued by all municipalities during the four elapsed months of the current year is $28,790,003. The value of the 58 municipalities for the same period is $22,563,360, while their corresponding value in 1941 was $27,221,698.

During the month of April new construction of all types amounted to 79·5 per cent of the total value, while the percentage of new residential construction was 42·0.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, April, 1942, summarizes the February-March employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at March 16, 1942 (exclusive of men numbering 25,973 who had been classified by interviewing panels as unsuitable for ordinary industrial employment), was 67,437, showing a decrease of 5,983 as compared with the corresponding total for February 16. Those registered as on short-time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 4,167, a decrease of 6,497 as compared with February 16. At the latter date, however, employment had been affected by severe weather conditions, which had temporarily restricted outdoor work. Those registered as unemployed casual workers numbered 5,627, a decrease of 3,036 since February 16.

The corresponding figures for women and girls at March 16 were 54,209 wholly unemployed (exclusive of those numbering 1,709 who had been classified by interviewing panels as unsuitable for normal full-time employment), 4,069 temporarily stopped, and 253 unemployed casual workers. Of the 54,209 wholly unemployed 1,607 had been classified as unable for good cause to transfer to another area. As compared with February 16, the numbers wholly unemployed showed a decrease of 5,973, those temporarily stopped a decrease of 2,534, and unemployed casual workers a decrease of 59.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for March 16 was 94,368, as compared

with 115,640 at February 16, and 316,975 at March 17, 1941.

United States

According to a press release issued on May 29 by Miss Frances Perkins, United States Secretary of Labour, there was a gain of 381,000 in total civil non-agricultural employment from mid-March to mid-April raising the April total to 40,773,000. Exceeding all previous April employment levels, the total was 2,545,000 greater than in April, 1941.

Increased employment on contract construction, largely on Federal projects, accounted for 137,000 of the increase over the month interval. Other major groups reporting gains were manufacturing; transportation and public utilities; finance, service, and miscellaneous; and Federal, State, and local government services. Employment in the mining group showed no change from the March level, gains in quarrying and metal mining offsetting the decreases reported in coal mining and crude petroleum production. The combined reports from wholesale and retail trade establishments indicated a net contraseasonal decline of 53,000 over the preceding month, due in part to the direct and indirect government restrictions affecting the sales of automobiles, tires, electrical appliances and other commodities.

Approximately one-half of the gain of more than 2,500,000 non-agricultural workers over the year occurs in manufacturing industries. With but one exception (wholesale and retail trade), all other major groups showed employment gains over April of last year. Substantial declines in the wholesale and retail automotive and the retail furniture groups contributed to the decline of 134,000 in trade employment over the year. All major retail groups reported fewer employees than in April, 1941, with the exception of the groups of retail food stores. This year pro-Easter shopping occurred too early in April to affect employment in retail stores in the pay period ending nearest the 15th, while last year, Easter buying was concentrated in the middle week of the month and accounted largely for a substantial employment gain.

The increase of 0·5 per cent in factory employment between March and April was about twice as large as the normally expected expansion while the corresponding increase in weekly pay rolls, 1·9 per cent or nearly $6,600,000, was in contrast to a typical decrease of 0·8 per cent ($2,800,000) for this month. The durable goods group showed a gain of 1·3 per cent (72,700) in employment while the nondurable goods group reported a reduction of 0·4 per cent (21,300).

Many industries continued to show employment declines as a result of shortages of materials and lay-offs pending plant conversion to war production. Among such durable goods industries were automobiles, hardware, plumbers' supplies, stamped and enamelled ware, tin cans, business machines, jewellery, and silverware and plated ware. Sharp increases, however, in such important war industries as shipbuilding, aircraft, foundries and machine-shops, engines, electrical machinery, and machine tools offset these declines sufficiently to cause a net gain in the durable goods group and in all manufacturing industries combined.

In the nondurable goods group, substantial seasonal increases were reported for the beverage, canning, ice cream, beet sugar, and butter industries and smaller gains for cane sugar refining and knitted outerwear. Contraseasonal gains were shown in the cotton goods, silk and rayon, and woollen and worsted goods industries. Declines in other nondurable goods industries, however, notably cottonseed oil, cake and meal; millinery; carpets and rugs; rubber goods; fertilizers; fur-felt hats, and hosiery more than offset these gains to cause a net decline in the group as a whole.

The April index of factory employment stood at 135·7 (1923-25=100) a rise of 10·7 per cent since April of last year, and the corresponding pay-roll index was 186·4, an increase of 38·4 per cent since last year. As has been indicated in preceding reports, factory pay rolls have advanced much more sharply than employment in recent months due to increased working hours in many industries, overtime premiums, and wage-rate increases.

Fewer factory workers were affected by wage-rate increases in April than in any month since March of last year. Wage-rate increases between March 16 and April 15, 1942, were reported by 590 manufacturing establishments out of a reporting sample of about 30,000. They averaged 8·1 per cent and affected about 110,000 workers out of a total of 6,000,000 employed by the covered plants.

Employment in anthracite mining declined 1·1 per cent and bituminous coal mining employment fell 0·5 per cent. Metal mining as a whole showed an employment increase of 0·7 per cent and employment in quarrying and nonmetallic mining showed a less than seasonal increase of 5·7 per cent. In crude petroleum production employment declined by 1 per cent.

Employment by street railways and buses again showed an increase of about 1 per cent, reflecting the demand for additional trans-

portation facilities. Increases of a seasonal character were reported by hotels, laundries, private building contractors, and dyeing and cleaning establishments. Brokerage firms reported fewer employees.

Retail establishments reported a net contraseasonal decline of 0·5 per cent in the number of workers due primarily to reductions in the automotive and furniture groups reflecting the effect of the war program on the sales of automobiles, tires, gasoline, and electrical appliances and radios. Wholesale firms reported a larger-than-seasonal employment decline of 1·6 per cent, due partially to reduced employment in the automotive and electrical groups.

Federally-financed construction showed a more-than-seasonal expansion during the month ending April 15, adding 177,000 workers and $35,649,000 in pay rolls. These represented increases of 15 and 18 per cent respectively over the preceding month, and of 63 and 93 per cent respectively over the past year. In April, all Federally-financed construction employed 1,372,000 persons and paid out a total of $234,328,000 in pay rolls.

War construction, not including housing, required 88 per cent of the employment and 89 per cent of the pay rolls. Expansion during April was concentrated mainly on the construction of cantonments, ordnance plants, air corps stations, new ships, air ports, and streets and roads.

Non-war construction other than housing, showed slight increases in employment and pay rolls during the month of April, but aggregated only 124,000 employees and $19,154,000 in pay rolls, less than 10 per cent of the total construction requirements.

Public housing employment has declined steadily since July, 1941 showing a net decrease of 42 per cent since April a year ago, from 72,900 to 42,600 persons. On the other hand, the war public works program including the construction of schools, hospitals, waterworks, and sanitary and recreational facilities servicing war-housing areas, has been expanding gradually since the inception of the program in October, 1941.

Employment in the executive branch of the Federal Government exceeded the 2,000,000 mark during the month of April, with the addition of 10,300 persons inside the District of Columbia and 97,800 outside the District. Both employment and pay rolls increased 6 per cent during the current month, but over the past year employment increased 63 per cent and pay rolls 73 per cent. The April pay rolls for the executive service were $327,119,000.

The expansion of war industries has been accompanied by drastic contraction of work-relief projects. During April, WPA personnel declined 96,800 persons, and during the past year 755,000. These represented decreases of 10 and 47 per cent respectively. The contraction has affected personnel on war projects of the WPA somewhat less than on others—4 per cent during the past month and 33 per cent during the past year.

The NYA dropped 10,100 persons from its student-work program and 15,300 persons from its out-of-school work program during April. Over the past year NYA personnel has contracted over 50 per cent.

Personnel on the CCC program likewise dropped sharply during April with the declines distributed among the different groups as follows: enrollees, 18,000 persons or 18 per cent; nurses, 8 or 16 per cent; educational advisers, 93 or 12 per cent; supervisory and technical, 1,080 or 6 per cent. Over the past year total CCC personnel has declined 64 per cent and total pay rolls 59 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (LABOUR GAZETTE, August, 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts". It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941, with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to

the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which was applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the LABOUR GAZETTE for October.)

The four major changes made by the new Order are: (1) the application of the minimum rate of *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders, and not only as previously to those employees actually engaged in Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation, (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

> "All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:
>
> The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide of except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In

the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in a sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During May

During the month of May the National War Labour Board prepared, on request, 149

fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various Government departments (other than the Department of Munitions and Supply) appear in the following table.

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE.—For the contracts in the following table marked "A1" a schedule of wage rates and other labour conditions was provided. For those contracts marked "A2" no wage schedule was provided but a General Clause was furnished calling for the payment of fair wages and the observance of the usual working hours.

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Transport.....	Construction of waterworks booster station.	Mount Hope, Ont.	The Frid Construction Co., Ltd., Hamilton, Ont.	May 4, 1942	$13,900 00	"A1"—Wage Schedule.

Letter Pouches and Mail Bags	Hugh Carson Co., Ltd., Ottawa, Ont.
Parcel Scales, etc.	Pritchard-Andrews Co. Ltd., Ottawa, Ont.
Letter Box Locks	Pritchard-Andrews Co. Ltd., Ottawa, Ont.

FAIR WAGE SCHEDULE FOR PUBLIC AND PRIVATE CONSTRUCTION WORKS IN MANITOBA

A NEW schedule of minimum hourly wage rates and maximum hours issued under the Fair Wage Act, was approved on May 21, 1942, by the Minister of Labour and gazetted on May 23. A note has been affixed to the schedule declaring that all increases in it are to be construed as a cost of living bonus. It is applicable to all classes of workmen employed in the construction of certain public and private works and is to be effective from June 1, 1942 to May 1, 1943, or until a further order is issued by the Minister.

The Fair Wage Act applies to "any public work or public works authorized by the Minister of Public Works for the execution of which a contract has or contracts have been entered into between the Minister of Public Works and an employer." The schedule also must be observed by employers engaged in Manitoba on Dominion Government contracts for the construction of public works, including highway, road, bridge or drainage construction works, if the provincial wage schedule is higher than the rates specified in the contract.

Private works to which the Act applies include the building, construction, remodelling, demolition or repairing of any building or construction work within the Greater Winnipeg Water District. They also include any such work in a city or town over 2,000 in population or in any portion of the province to which the Lieutenant-Governor in Council may extend the provisions of the Act, provided that the total cost for such work, irrespective of the number of contracts made, exceeds $100. They do not include repair or maintenance work done by a regular maintenance staff on any property by or under the immediate direction or control of the owner, occupant or tenant of the property as long as such work is not undertaken with a view to the sale or rental of the property.

The new schedule is given below along with the 1941 schedule. Earlier schedules may be found in the LABOUR GAZETTE for each year from 1917 to 1940 inclusive. The 1942 schedule is the first one in which a different set of maximum hours has been prescribed for each of the two zones into which the province has been divided.

FAIR WAGE SCHEDULE

Occupation	Minimum Rate per Hour				Maximum Hours per Week	
	A—Greater Winnipeg Water District Area, for Private Work, and for Govt. work, Winnipeg and radius of 30 miles		B—Other than Area described in "A" (applies to private work when population exceeds 2,000)		Winnipeg and radius of 30 miles[1]	Outside of 30 mile radius
	1941	1942	1941	1942	1941-42	1942
1. Asbestos Workers—						
(a) Journeymen	.80	.85	.80	.85	44	50
(b) Improvers	.65	.65	.65	.65	44	50
2. Asphalters—						
(a) Finishers	.63	.63	.58	.58	44	50
(b) Rakers	.58½	.58½	.54	.54	44	50
(c) Tampers	.50	.50	.45	.45	44	50
3. Blacksmiths	.70	.75	.65	.70	44	50
4. Boiler Makers on Construction or Erection Work	.85	.90	.85	.90	44	50
Helpers	.55	.60	.55	.60	44	50
5. Bricklayers[2]	1.15	1.20	1.00	1.05	44	50
Helpers[3] (continuously employed at mixing and tempering mortar)	.52½	.57½	.45	.50	48	54
6. Bridge and Structural Steel and Iron Workers	.90	.95	.90	.95	44	50
7. Carpenters and Millwrights[2,4]	.95	1.00	.80	.85	44	50
8. Cement Finishers (in warehouses or large floor area jobs)	.65	.70	.60	.65	48	54
9. Electrical Workers[4] (inside wiremen, licensed journeymen)	.95	.95	.80	.80	44	50
10. Elevator Constructors	1.00	1.05	1.00	1.05	44	50
Helpers	.70	.74	.70	.74	44	50
11. Labourers—						
(a) Skilled (comprising placing or assisting mechanics in the placing of cut stone, architectural terra cotta, marble (real or imitation), roofing slate and shingles, plaster castings, ornamental bronze and iron, interior joinery, laying drain tiles, attending concrete mixers, bending and placing reinforcing material, movable scaffolding and runways)	.50	.55	.45	.50	48	54
(b) Unskilled	.45	.45-.50	.40	.40-.45	48	54
12. Lathers (Metal, Wood)—						
(a) Metal Lathers	.80	.85	.75	.80	44	50
(b) Wood Lathers	.70	.75	.65	.70	44	50
13. Linoleum Floor Layers	.60	.65	.55	.60	48	50
14. Marble Setters	1.10	1.15	.95	1.00	44	50
Helpers[5]	.52½	.57½	.45	.50	48	50
15. Mastic Floor Kettlemen	.45	.50	.45	.50	48	50
16. Mastic Floor Rubbers and Finishers	.55	.60	.55	.60	48	50
17. Mastic Floor Spreaders and Layers	.85	.90	.85	.90	48	50
18. Operating Engineers and Firemen on Construction—						
Class A: Engineers in charge of hoisting engines of three drums or more operating any type of machine, or operating trenching machines, clamshells or orange peels, regardless of capacity, or operating steam shovels or draglines of one yard capacity or over, or operating drop hammer pile drivers; in all cases irrespective of motive power	1.00	1.05	.80	.85	48	50
Class B: Engineers in charge of hoisting engines having only two drums or of single drum, used in handling building material, or steam shovels and draglines not specified in "A"; irrespective of motive power	.95	1.00	.75	.80	48	50
Class C: Engineers in charge of any steam operated machine not specified in "A" or "B"; or in charge of a steam boiler if its operation necessitates a licensed engineer under Steam-Boiler Act; or air compressor delivering air for the operation of riveting guns on steel erection work, or pumps in caissons, or concrete mixers rf over ½ yard capacity; irrespective of motive power	.85	.90	.70	.75	48	50
Class D: Men firing boilers of machines classified in "A", "B" or "C", or assisting engineers in charge of same	.60	.65	.50	.55	48	50
Class E: Operators of gas or electric engines for machines not specified in "A", "B" or "C", of a type usually operated by skilled labourers	.50	.55	.40	.45	48	50
19. Painters, Decorators, Paperhangers and Glaziers	.75	.80	.70	.75	44	50
20. Plasterers	1.15	1.20	1.00	1.05	44	50
Helpers (continuously employed at mixing and tempering material, including the making of putty and operation of machinery)	.52½	.57½	.45	.50	48	54
21. Plumbers	1.05	1.10	.95	1.00	44	50
Helpers[5]	.52½	.57½	.45	.50	48	54
22. Roofers (Felt and Gravel)	.60	.65	.55	.60	48	50
Mop Handlers	.45	.50	.40	.45	48	50
23. Sheet Metal Workers	.75	.80	.70	.75	44	50
24. Shinglers	.80	.85	.70	.75	44	50

33. Truck Drivers (while in charge of truck)	.50	.55	.45	.50	48	54
34. Trucks only (when used on construction work and paid at an hourly rate) when truck is hauling not more than 1 cubic yard	.55	.55	.....	.....	.....	.....
For each additional 1/10 cubic yard	.04½	.04½	.....	.....	.....	.....
35. Watchmen	.35	22.50 per week	.35	.....	.....	.....
36. Welders and Burners (acetylene or electric)	.75	.80	.....	.....	.....	.....
37. Welders and Burners on Steel Erection[6]	.85	.90	.....	.....	.....	.....

Overtime:—

Time worked in excess of the maximum hours as stipulated in the schedule shall be paid at the rate of time and one-half, including Saturday afternoon. All hours worked on Sunday to be paid at the rate of double time, except in cases of emergency when time ond one-half shall be paid.[7]

Rule:—

All men hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule rate, except where other definite agreements are made.

[1] In 1941 these hours also applied to the rest of the province outside the 30-mile radius. [2] Subject to existing agreements between Builders' Exchange and Bricklayers' Union or Carpenter' Union, Local 343. [3] In 1941 rates were also set for helpers attending on or at scaffold: 45 cents in Area A, 40 cents in Area B. [4] In 1941 rates for carpenters' apprentices between ages of 17 and 24 indentured for 4-year period: were 30 cents per hour for first 6 months with 5 cent increase every 6 months up to and including seventh period, totalling 3½ years, and 10 cent increase for last 6 months, making the rate 70 cents per hour. In 1942 the same rates are prescribed for electrical apprentices and initial rate for carpenters' apprentices has been raised to 35 cents.

[5] All men assigned to help tradesmen. [6] In 1941 a rate of 52½ cents for a 44-hour week was set throughout the province for Reinforcing Steel Rodmen when exclusively hired for or occupied on the work of bending, placing, tieing and similar skilled work in connection with reinforcing steel work. [7] In 1941 the special provisions regarding Saturday and Sunday were not in effect.

PUBLIC ROAD AND BRIDGE WORKS

The following schedule shall apply f rom and after June 1st, 1942, on "public works" outside of the Greater Winnipeg Water District Area in all parts of Manitoba for highway, road, bridge or drainage construction work where a contract has been entered into by the Honourable Minister of Public Works:

Occupation	Minimum Rate per Hour		Maximum Hours per Week	
	1941	1942	1941	1942
Teamsters	.35	.40	48	54
Labourers	.35	.40	48	54
Teamsters and Two Horse Team	.60	.60	48	54
Teamsters and Four Horse Team	.85	.85	48	54
Grader and Tractor Operators (excepting permanent municipal employees)	.60	.65	48	54
Truck Drivers (regardless of basis for payment of truck)	.45	.50	48	54
Truck only—				
When truck is hauling not more than 1 cubic yard	.55	.55	.....	.....
For each additional 1/10 cubic yard load	.04½	.04½	.....	.....
Timber Men (timber work where use of hammers, saws, axes and augers only are required)	.55	.60	48	48

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Animal Foods

TORONTO, ONTARIO.—CANADA PACKERS LTD. AND THE EMPLOYEES' PLANT COUNCIL OF CANADA PACKERS, TORONTO.

Agreement in effect from March 3, 1942, for the duration of the war and one year after the war has ended, and thereafter from year to year (ending October 31) until notice.

Provision is made for the setting up of an employees' plant council by annual elections, and of a joint board consisting of six representatives of the company and six of the employees' plant council.

Regular hours are not stipulated but it is provided that overtime at the rate of time and one half be paid to all hourly paid employees for work over 10 hours in any day and 6 hours on Saturday; time and one half also for work on Sundays and eight specified holidays. For weekly paid employees, those working over 54 hours in any week to receive equivalent time off or be paid for such hours at their regular wage rate. The wage scale in effect at the time the agreement was made is to remain in effect subject to modification permitted by the National War Labour Board.

Seniority rights, vacation with pay and the adjustment of grievances are provided for.

VANCOUVER, B.C.—CANADA PACKERS LTD. AND THE UNITED PACKINGHOUSE WORKERS OF AMERICA, LOCAL 162, AFFILIATED WITH THE PACKINGHOUSE WORKERS' ORGANIZING COMMITTEE.

Agreement in effect from March 4, 1942, and thereafter from year to year, subject to notice.

The company recognizes the union as the sole collective bargaining agency; no discrimination against any employee for being or not being a union member. Hours not more than 48 per week for all except truck drivers whose hours are 54 per week. A schedule of hours for all employees to be drawn up. Overtime to be paid at time and one half for all work over the schedule except truck drivers who shall be paid time and one half for all time over 50 hours per week. Time and one half for work on eight specified holidays. The company desires that its policy shall be to pay the highest rate of wages which the circumstances of the business from time to time permit, provided such rates are compatible with orders issued by the Dominion Government.

Seniority rights, vacation with pay and the adjustment of grievances are provided for.

Manufacturing: Metal Products

SAULT STE MARIE, ONTARIO.—ALGOMA STEEL CORPORATION AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 485.

Agreement in effect from October 1, 1941, to September 30, 1942, and thereafter from year to year, subject to notice.

The company recognizes the Shop Committee of the union as the sole bargaining agency for employees covered by this agreement. Hours: 8 per day, 48 per week. Overtime; time and one half. The wage schedule to continue in effect until any change is permitted by the Regional War Labour Board. One apprentice allowed to five journeymen and apprentices to serve four years. Wages for apprentices are from 25 cents per hour during first six months to 60 cents during eighth six months. Provision is made for seniority rights and for the settlement of disputes and grievances.

ST. BONIFACE, MANITOBA.—DOMINION WHEEL AND FOUNDRIES LTD. AND INTERNATIONAL MOULDERS' AND FOUNDRY WORKERS' UNION, LOCAL 174.

Agreement reached following strike reported in the LABOUR GAZETTE, January, page 157, and later negotiations. Agreement in effect from March 2, 1942, to March 2, 1943 and thereafter subject to notice. No discrimination against any employee on account of union activity.

Hours: 9 per day, 5 on Saturdays, a 45-hour week. Overtime rates to be paid for all work over 9 hours in any one day. Rates of pay to be maintained as outlined in the federal government Order in Council P.C. 8253, with cost-of-living bonus governed by changes in the index number of the cost-of-living. Wage schedules are to be prepared and are to form a supplement to this agreement. Seniority rights and settlement of grievances are provided for.

Construction: Building and Structures

HAMILTON, ONTARIO.—HAMILTON MASTER PLUMBERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 67.

Agreement in effect from July 2, 1941, for the duration of the war. Only union members to be employed, if available.

Hours: 8 per day, Monday to Friday, a 40-hour week. Overtime is payable at time and one-half until midnight; work after midnight and all work on Saturdays, Sundays and eight specified holidays, double time. Changes may be made in working hours and overtime to meet war conditions. Minimum wage rate for journeymen: 95 cents, with semi-annual adjustments with changes in the cost-of-living; fifth year junior mechanics to be paid 70 per cent of journeymen's wage. Apprentices to be employed in accordance with the Ontario Apprenticeship Act. One junior mechanic allowed to each branch of the trade on each job, and one extra where six journeymen employed, with one for each additional five journeymen. A joint conference board to be formed for the settlement of disputes.

WINDSOR, ONTARIO.—ELECTRICAL. CONTRACTORS OF THE COUNTY OF ESSEX AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, B-773.

This agreement which came into effect May 1, 1941, and runs from year to year, subject to notice, is similar to the one previously in effect and summarized in the LABOUR GAZETTE, March, 1940, page 278. The hourly wage rate is $1.15, with a 40 hour week.

VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE UNITED ASSOCIATION OF PLUMBERS, LOCAL 170 (ASBESTOS WORKERS).

By an amendment, dated November 1, 1941, to the agreement for plumbers (LABOUR GAZETTE, December, 1941, page 1569) asbestos workers and their helpers are brought under the agreement. They must be union members and journeymen asbestos workers are to be paid $1 per hour, asbestos workers' helpers 60 cents.

Construction: Shipbuilding

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING COMPANY AND THE BOILERMAKERS AND IRON SHIPBUILDERS' UNION, LOCAL NO. 1.

Agreement in effect from March 16, 1942, for the duration of the war and thereafter until completion of wartime contracts. This agreement is similar to the agrement between this same local union and another shipyard of this same company (LABOUR GAZETTE, March, 1940, page 279, with the amendments which were noted in the LABOUR GAZETTE, June, 1941, page 700 and April, 1942, page 481) with certain differences in the hours.

Hours: 8 per day, 44 per week for day work. In shift work, the second shift to be from 4.30 p.m. to 12.30 a.m. with a 20-minute lunch period; for which 9 hours' pay allowed; the third shift to be from 12.30 a.m. to 8 a.m. with a 20-minute lunch period, for which 9 hours' pay allowed; 40 hours to constitute a week's work for second and third shifts.

VANCOUVER, B.C.—A CERTAIN SHIPBUILDING COMPANY AND THE BLACKSMITHS AND HELPERS' UNION OF CANADA, LOCAL NO. 1.

This agreement is in effect from November 10, 1941, for the duration of the war and wartime contracts. It is similar to the one between this same union and another shipyard, which was summarized in the LABOUR GAZETTE, January, page 106, with these exceptions: There are differences in the times of beginning and ending shifts, although the total daily and weekly hours are the same. The basic wage rates are the same (90 cents for blacksmiths and 65 cents for blacksmiths' helpers). It is, however provided that from September 23, 1941, until altered pursuant to the terms of Order in Council P.C. 8253, the basic wages to be increased by a flat bonus of 7 cents per hour. The above rates are subject to adjustment in accordance with cost-of-living based on principles of Order in Council P.C. 8253 to be paid in accordance with the interpretations of the National War Labour Board.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the LABOUR GAZETTE, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were

summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the amendment of ten agreements, as noted below. A request for the extension of a new agreement for building trades at Montreal was published in the *Quebec Official Gazette* of May 23. Requests for the amendment of the following agreements were published in the *Quebec Official Gazette,* as follows: municipal employees (outside services), in the issue of May 2; the shoe industry throughout the province, in the issue of May 9; barbers at Rouyn and Noranda, the paper box (corrugated paper) industry throughout the province, in the issue of May 16; barbers and hairdressers at Quebec and building trades at Sorel, in the issue of May 23; building trades at Sorel, at St. John and Iberville (two requests) at St. Jerome, at Quebec, at Chicoutimi, at Hull, at Joliette, at Three Rivers, at Sherbrooke, at St. Hyacinthe, at Val d'Or and Amos, and at Montreal, in the issue of May 30.

In addition, Orders in Council were published in the *Quebec Official Gazette* during May, approving or amending the constitution and by-laws of four parity committees, and others approving the levying of assessments or amending previous Orders in Council in this connection by fourteen parity committees.

Mining, Non-Ferrous Smelting and Quarrying

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC

See below under "Manufacturing: Non-Metallic Minerals, Chemicals, etc."

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL

An Order in Council, dated April 30, and published in the *Quebec Official Gazette,* May 9, amends the previous Order in Council for this industry (LABOUR GAZETTE, November, 1941, page 1424) by providing for a cost-of-living bonus in accordance with 1941 Orders in Council P.C. 8253 and P.C. 9514 of the federal government.

Manufacturing: Non-Metallic Minerals, Chemicals, Etc.

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated April 30, and published in the *Quebec Official Gazette,* May 9, amends the previous Orders in Council for this industry (LABOUR GAZETTE, July, 1940, page 731, June, 1939, page 628, September, page 951, February, 1940, page 172, and September, 1941, page 1159) by providing for a cost-of-living bonus in accordance with 1941 Orders in Council P.C. 8253 and P.C. 9514 of the federal government.

PAINT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated April 28, and published in the *Quebec Official Gazette,* May 2, extends the term of this agreement (LABOUR GAZETTE, March, 1940, page 282, January, 1942, page 110 and March, page 353) to May 1, 1942.

Construction: Buildings and Structures

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL

See above under "Manufacturing: Metal Products".

ELEVATOR CONSTRUCTORS, PROVINCE OF QUEBEC

An Order in Council, dated May 21, and published in the *Quebec Official Gazette,* May 30 extends the term of this agreement (LABOUR GAZETTE, September, 1941 page 1159 and December, page 1573) to June 30, 1942.

BUILDING TRADES, SOREL

An Order in Council, dated May 27, and published in the *Quebec Official Gazette,* May 30, amends the terms of this agreement (LABOUR GAZETTE, October, 1938, page 1172, November, 1938, page 1299, December, 1940, page 1311 and March, 1941, page 334) by including in the agreement the manufacture of doors and window frames, and provides an hourly wage rate of 40 cents for painters in the employ of manufacturers of doors and window frames, and 35 cents for labourers employed by such manufacturers, including yardmen, horse and truck drivers, deliveries and transport employees.

BUILDING TRADES, JOLIETTE

An Order in Council, dated May 27, and published in the *Quebec Official Gazette,* May 30, amends the previous Order in Council for this industry (LABOUR GAZETTE, May, 1940, page 498, and March, 1941, page 334). In the original agreement it was provided that overtime be paid at time and one half. The amendment states that all hours outside the hours stipulated are to be considered overtime and paid at time and one half. (The hours stipulated are 8 per day, between 7 a.m. and 5 p.m., a 48 hour week.)

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION)

An Order in Council, dated April 28, and published in the *Quebec Official Gazette,* May 2, extends the term of this agreement (LABOUR GAZETTE, June, 1939, page 629; February, 1940, page 173; April, page 391; June, page 610; February, 1941, page 184; April, page 473; June, page 705; July, page 854; August, page 1013; September, page 1162; November, page 1425; February, 1942, page 234, and March, page 353) to May 31, 1942.

Trade

Hardware and Paint Stores, Quebec

An Order in Council, dated May 13, and published in the *Quebec Official Gazette,* May 23, amends the previous Orders in Council for these stores (Labour Gazette, April, 1940, page 391; December, page 1312; January, 1941, page 70; June, page 705) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

Clerks and Accountants, Jonquiere, Kenogami, Arvida and St. Joseph D'Alma

An Order in Council, dated April 28, and published in the *Quebec Official Gazette,* May 2, amends the previous Orders in Council (Labour Gazette, July, 1939, page 730; January, 1940, page 69; October, page 1076; November, page 1203; December, page 1312; February, 1941, page 184; March, page 234) by providing for a cost-of-living bonus in accordance with the federal government 1941 Orders in Council P.C. 8253 and P.C. 9514.

WOMEN IN WAR INDUSTRIES

Women in War Industries is the title of a report recently published by the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University, Princeton, New Jersey.

As stated in a foreword to the report, it is intended to summarize the principal personnel problems facing industry in connection with the greater employment of women in industry and to evaluate the methods which have been used to meet these problems in the United States and Great Britain.

In a summary of the findings given in the report, the following items are given as a check list of activities to be given consideration by any company facing the prospect of new or increased employment of women in production work:—

1. A preliminary survey of the whole plant to determine on what jobs women can be placed at once, and which jobs they could handle if a much wider substitution of women proves necessary.

2. Advance discussion concerning the introduction of women with supervisors and union leaders.

3. The extent of job re-engineering required where women may be substituted for men.

4. The need for any changes in the physical plant, including relocation and changes in production departments, additional rest rooms, new or increased lunch-room space, and additional first-aid rooms.

5. The available pre-employment training facilities and the extent to which these can be used to advantage.

6. New recruiting methods. Should the company itself develop new sources of labour supply or depend more upon the public employment offices?

7. Revisions in employment policies affecting women. Are requirements as to age, education, and marital status limiting unnecessarily the choice of women applicants? Are a woman's home responsibilities considered in accepting her for employment?

8. Revisions in employment procedures. Do job specifications and application forms fit the new requirements, and are interview questions, tests, and physical examinations adapted to the employment of women on new types of work?

9. Induction procedures. Do they give sufficient attention to the adjustment of women to industry, and emphasize the importance of the individual's work to war production?

10. New training problems. Does the job training require strengthening in any department, and should the upgrading training program be extended to women?

11. If the personnel staff is expanding, is there need for special training for men and women new to personnel work? Could the company co-operate with educational institutions to develop satisfactory short-time training in this field?

12. Determination of the most satisfactory daily and weekly hours of work for women in the light of available reported experience and opinion, and in accordance with the company's own experience. Is a third or fourth crew needed to limit women's hours to the accepted optimum?

13. Separate absence, turnover, accident, and production records for men and women.

14. Exit interviews and interviews with employees with poor attendance records. Can these interviews be used to better advantage to determine the basic causes of high absenteeism and labour turnover?

15. Factors involved in shift schedules for women. Will rotation or non-rotation be most satisfactory to the majority of your employees? Can mothers of young children and employees whose transportation is most difficult at night be given special consideration in shift assignments?

16. The need of at least a 30-minute lunch period and the value of additional regular rest periods.

17. Women's wage rates. Weigh both internal and external wage conditions and trends in developing a wage policy in regard to women who are being placed on men's work. If previously established differentials are to be maintained, consider the possibility of upgrading the older women employees to the new and better paid jobs.

18. Special safety efforts in connection with new women employees. Can accidents among this group be prevented or reduced through improved safety instruction, better safety devices, and stricter clothing rules?

19. An adequate medical service. Is there provision for thorough physical examinations for women? Is a nurse in attendance on all shifts on which women are employed? Is someone responsible for continuous observation of working conditions with particular concern for any new industrial disease hazards?

20. Co-operation with community agencies on outside problems which affect the employees' productivity. Can management increase the efficiency of its employees by co-operating with civic agencies, labour unions, and other companies in improving transportation, housing and recreational facilities?

PRICES, RETAIL AND WHOLESALE IN CANADA, MAY, 1942

Cost-of-Living, Prices of Staple Articles and Index Numbers

THE index number of the cost-of-living in Canada calculated by the Dominion Bureau of Statistics on the base period 1935 to 1939 as 100 advanced from 115·9 at the beginning of April to 116·1 at the beginning of May. The increase was due mainly to higher prices for certain foods but there were fractional increases also in the clothing and rent groups, while the home furnishings group was slightly lower. The increase in the food group was due to advances in the prices of meats, vegetables, and fruits. Egg prices averaged slightly lower. The increase in the index since August, 1939, down to May 1, 1941, was 15·2 per cent as compared with an increase of 28·2 per cent between July, 1914, and April, 1917, the similar period during the last war.

After adjustment to the base 100·0 for August, 1939 as required by Order in Council P.C. 8253 of October, 1941, the index was 115·2 at May 1 as compared with 115·0 at April 1, 114·5 at January 2, and 114·6 at October 1, 1941.

Foods advanced 25·2 per cent between August, 1939 and May, 1942; clothing 19·8 per cent; home furnishings and services 16·9 per cent; fuel and light 14 per cent; rent 7·2 per cent and the miscellaneous group 5·7 per cent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE, for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the LABOUR GAZETTE the activities of the Board in the operation of the price control policy are summarized. Prices of fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers. Onions were placed under a price ceiling in January the basic period being the week ended January 10, and potatoes in March with the basic period February 2-7.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9.

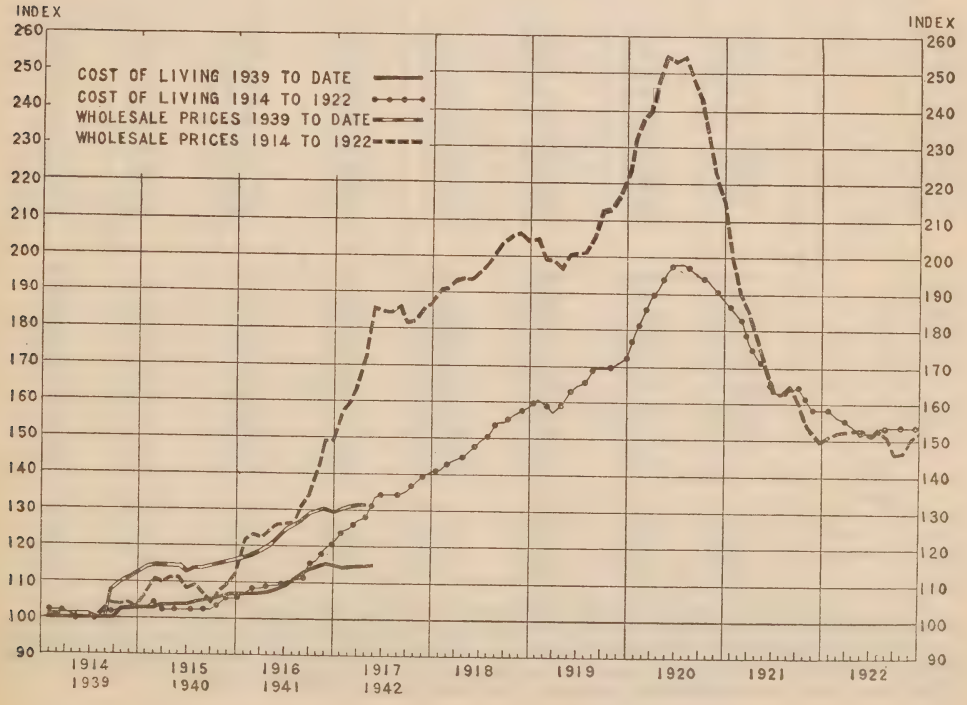
The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 was 95·2 for May as compared with 95·0 for April; 88·5 for May, 1941; 82·2 for May, 1940; and 72·3 for August, 1939, the last prewar month. Four of the eight main groups in the classification according to chief component materials advanced during the month. These are the Vegetable Products group, the Animal Products group, the Wood and Wood Products group, and the Non-Metallic minerals group. Two of the main groups were unchanged and two were lower, the Chemicals and Allied Products group and the Iron and Iron Products group. The

increase in the general index between August, 1939, and May, 1942, was 31·7 per cent. Canadian farm products advanced 37·3 per cent in the same period, consumers' goods 30·8 per cent, and producers' goods 32·4 per cent. The increase in the general index between July, 1914, and April, 1917, was 71·9 per cent.

Explanatory Note as to Retail Prices



The table of retail prices and rentals shows the prices at the beginning of May of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (LABOUR GAZETTE, December, 1941, page 1462), the price ceiling established by P.C. 8527 (LABOUR GAZETTE, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (LABOUR GAZETTE, October, 1940, page 995) the Board from time to time

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939=100

DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA

had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 748. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail prices of meats at the beginning of May continued gradually upward. Marketings of cattle in April were lower than in April, 1941 but the total for 1942 to date exceeded the number for the similar period last year. In both the above comparisons the number of hog carcasses graded in 1942 exceeded the number in the comparable period

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in Other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive, 502, and since January, 1934, the number is 567.

in 1941. The price of sirloin steak averaged 34·7 cents at May 1, 34·2 cents at April 1, and 32·3 cents at May 1, 1941. Fresh loin of pork was 33·3 cents at the beginning of May 33·2 cents one month earlier and 25·2 cents at May 1, 1941. Bacon at 43·3 cents was fractionally higher than for April as compared with an average price of 32·8 cents at May 1, 1941.

The price of fresh eggs has averaged lower month by month since November, 1941. The price at May 1 was 35·3 cents per dozen as compared with 51·2 cents for November 1, 1941, and 26·4 cents at May 1, 1941. Stocks in storage at May 1 were more than double those of the previous month or of May 1, 1941, but were reported to be mostly for distribution to egg drying plants.

Production of creamery butter for the first four months of the year was about 10 per cent less than for the same period in 1941 while the production of cheese for the four months period in 1942 was more than three times that of the corresponding period of 1941. The price of creamery butter at May 1 averaged 39·3 cents per pound as compared with 39·1 cents the previous month and 34·9 cents at the beginning of May, 1941. In the same comparison the price of cheese averaged 35·9 cents per pound, 36·5 cents and 24·4 cents respectively. By an order of the Wartime Prices and Trade Board effective May 1, 1942, the ceiling prices on milk and dairy products were reorganized with a view to having a more equitable and balanced price structure.

Onions advanced in the average from 6·9 cents per pound at the beginning of April to 7·2 at the beginning of May increases having been reported from nearly all localities. Potatoes at 40·9 cents for 15 pounds averaged slightly higher than one month ago as compared with an average price of 25·5 cents at the beginning of May, 1941. The price of bananas has advanced gradually during recent months. At May 1 the average was 13·1 cents per pound as compared with 11·1 cents at January 1, and 10·1 cents at May 1, 1941.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost-of-living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries are included in "Prices in Canada and Other Countries, 1941" issued as a supplement to the May issue of the LABOUR GAZETTE. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 159·6 for April, an increase of 0·5 per cent for the month and of 5·8 per cent over the April, 1941, level. As compared with March, prices of food and tobacco as a whole were 1·2 per cent higher, due to the advance of 3·5 per cent in the "other food and tobacco" group, the increase in this group was mainly due to the substantial increase on April 15 in the duty on tobacco, amounting to nearly 50 per cent of the previous price. There was very little change in any of the other groups.

COST-OF-LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 199 at April 1, a decline of 0·5 per cent for the month. Food prices were one per cent lower, the principal change being a reduction in the price of eggs under an Order of the Ministry of food. There were no changes in the index numbers for rent and clothing, and very slight increases in the fuel and light and sundries group.

Newfoundland

COST-OF-LIVING.—For the first time index numbers of the cost-of-living at St. Johns, Newfoundland, appeared in "Prices in Canada and Other Countries, 1941" issued as a supplement to the May issue of the LABOUR GAZETTE. This showed the available figures until the end of the year 1941. The index number, on the base October 1, 1938=100, was: 131·4 at January 3, 1942; 133·8 at February 7; 135·6 at March 7; 136·8 at April 4; and 136·3 at May 2. Between October 1, 1938, and May 2, 1942, food prices had risen 55·9 per cent, fuel and light 41·1 per cent, clothing 30 per cent, sundries 15 per cent, while rent was unchanged.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1926-1930=1,000, was 1,361 for January, a fall of 1·2 per cent for the month, due chiefly to the substantial decline in agricultural produce.

United States

WHOLESALE PRICES.—The Bureau of Labor Statistics index number, on the base 1926=100, was 98·7 for April, an increase of 1·1 per cent for the month. This was due chiefly to the rise of about two per cent in the farm products, foods and hides and leather products groups.

COST-OF-LIVING.—The index number of the Bureau of Labor Statistics, on the base 1935-1939=100, was 115·1 at April 15, an increase of 0·7 per cent for the month. Food rose 0·8 per cent, clothing 2·7 per cent, rent 0·2 per cent, housefurnishings 0·3 per cent, the miscellaneous group 0·5 per cent, while the fuel, electricity and ice group was 0·3 per cent lower.

VOLUME XLII] JULY, 1942 [NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed further improvement at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 13,064 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 1,674,665 persons, or 21,740 more than in the preceding month. The index of employment, based on the average for the calendar year 1926 as 100, stood at 167·4, as compared with 165·2 at April 1, and 145·5 at the beginning of May last spring. The indexes for May 1 of recently preceding years are as follows: 1940, 114·3; 1939, 106·2; 1938, 107·4; 1937, 106·3 and 1936, 99·5.

The industrial expansion indicated at May 1, 1942, was on a scale rather less-than-average, according to the experience of the period, 1921-1941; the index of employment, after correction for seasonal influences, therefore slightly declined, falling from its all-time high of 175·0 at April 1 to 173·7 at May 1.

The general advance in employment at the beginning of May was accompanied by an increase in the payrolls disbursed. The employees of the reporting firms in the manufacturing, logging, mining, communications, transportation, construction, services and trade industries were paid the sum of $47,887,408 at May 1 for services rendered in the week preceding. This was a per capita average of $28.60. The weekly average reported at April 1 had been $28.41. Including those in financial institutions, the men and women in recorded employment at May 1 numbered 1,738,018, whose earnings amounted to $49,795,070, an average of $28.65 per worker. The average pay envelope of those employed by the same establishments at April 1 had contained $28.47.

Unemployment in Trade Unions.—At the beginning of June, 1942, the percentage of unemployment among trade union members stood at 2·4 in contrast with percentages of 3·3 at the beginning of May and 4·6 at the beginning of June, 1941. The percentage for June was based on returns compiled from 2,208 local labour organizations with a total membership of 352,821.

Report of Employment and Claims Offices.—Reports received by the Unemployment Insurance Commission from Employment and Claims Offices during the month of May, 1942, showed a moderate gain in placements over April, but a noticeable decrease from the corresponding month of 1941. All industrial divisions, except agriculture and logging, reported increases under the first comparison, but heavy reductions in services, construction and logging accounted for the loss under the second, although this was partly offset by an appreciable gain in manufacturing. Vacancies in May, 1942, numbered 52,759, applications 56,475, and placements in regular and casual employment 34,200.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 116·7 at the beginning of June as compared with 116·1 for May; 110·5 for June, 1941; 104·9 for June, 1940 and 100·8 for August, 1939, the last pre-war month. The advance at the beginning of June was due to price increases in the food group, chiefly meats, eggs and potatoes. The increase in the index between August, 1939, and June, 1942, was 15·8 per cent as compared with an increase of 33·3 per cent between July, 1914, and May, 1917, the similar period during the last war. In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 95·8 for June as compared with 95·2 for May; 90·0 for June, 1941; 81·6 for June, 1940; and 72·3 for August, 1939. The increase in the index between August, 1939,

56615—1½

and June, 1942, was 32·5 per cent and between July 1914, and May, 1917, was 85·2 per cent.

Business Statistics.—The table on page 755 shows the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business which reflects activity in mining, manufacturing and construction, as well as in the distribution of goods was lower in May than in the preceding month a decrease having been indicated for the manufacturing group and for construction. Other principal groups advanced slightly.

The general business index averaged 136·7 for the first five months of 1942 as compared with 128·1 for the similar period of 1941. Reflecting this increase particularly is industries engaged on war contracts, the general index of employment averaged 19·9 per cent higher for the first five months of 1942 than for the like period in 1941. The numbers employed in manufacturing plants recorded an advance of more than 28 per cent in the same comparison.

Cumulative totals for the first five months of the current year as compared with the similar period of the preceding year show the output of electric power to be 18·2 per cent greater, steel production 35·9 per cent, and pig iron 57 per cent greater, cigarettes released 22·4 per cent greater, boots and shoes 12·2 per cent greater and newsprint 5 per cent greater. The value of retail sales averaged 17·5 per cent greater and the number of cars of revenue freight 10·2 per cent. The value of construction contracts declined 32 per cent in the same comparison, the receipts of gold at the Mint 7·6 per cent, and the output of creamery butter 9·8 per cent.

Strikes and Lockouts.—In June the number of strikes and lockouts recorded was 54, involving 16,069 workers and causing time loss of 41,232 man working days, as compared with 32 disputes in May involving 6,904 workers with time loss of 18,047 days. In June most of the time loss was due to disputes involving boot and shoe workers at Quebec, P.Q., shipyard workers at Vancouver, B.C., distillery workers at Ville LaSalle (Montreal), P.Q., meat packers at Kitchener, Ont., steel workers at Trenton, N.S., and paper mill workers at Mont Rolland and St. Jerome, P.Q. Most of the other disputes were of short duration and involved comparatively small numbers of workers. In May the only important disputes involved coal miners at Florence and Sydney Mines, N.S., meat packing workers at Kitchener, Ont., steel workers at Trenton, N.S., and bank clerks at Montreal P.Q.

During June 1941, there were 32 disputes involving 7,547 workers and causing time loss of 39,284 days. The important disputes involved hosiery workers at Toronto, Ont., electrical apparatus workers at Toronto and Hamilton, Ont., button factory workers at Kitchener, Ont., coal miners in Nova Scotia, loggers at Cowichan Lake, B.C., steel plant workers at Montreal, P.Q., and painters at Toronto, Ont.

Of the 54 disputes during June of this year 46 were terminated, 12 in favour of the employer, 11 in favour of the workers, 18 were indefinite in result, 3 were partially successful and 2 were settled by compromise. Eight disputes, involving 4,920 workers, were recorded as unterminated at the end of the month.

Reinstatement in civil employment of persons discharged from active service

On July 10 the House of Commons passed Bill 5 to provide for the reinstatement in civil employment of persons discharged from service in His Majesty's Forces. The Bill was introduced by the Hon. Humphrey Mitchell on March 6 and was amended by the Special Committee on Canteen Funds. It applies to men and women on active service in the naval, military or air forces, to the Corps of (Civilian) Canadian Fire Fighters for Service in the United Kingdom and to persons called out under the National Resources Mobilization Act. It also includes Canadian merchant seamen employed for at least six months on Canadian or foreign ships except ships of an enemy of the United Nations. Application for reinstatement must be made within three months after discharge in Canada or within four months after discharge overseas.

(The provisions of the Bill originated in Order in Council P.C. 4758 of June 27, 1941. In announcing this Order in the House of Commons last year, the then Minister of Labour, Hon. Norman A. McLarty, stated that at the next session of Parliament the Government would supplement the Order by legislation. Both the Minister's statement and the Order were given in the LABOUR GAZETTE, July, 1941, page 803.)

New provisions for assisting vocational training in Canada

Bill No. 64 (Vocational Training Co-ordination Act, 1942) which repeals the Vocational Educational Act, 1931, received its third reading on June 13. The Bill makes provision for the Dominion Government conducting, in co-operation with the Provinces, any vocational training which is necessary for the war effort including training workers for war industries, tradesmen for the various branches of the Armed Forces and rehabilitation training for

persons discharged from the Armed Forces and approved for training by the Minister of Pensions and National Health. The cost of this training will be borne by the Dominion.

The Bill also provides for the continuation of those projects formerly carried on under the Youth Training Act, 1939. Looking toward the post-war period, provision is made for training projects connected with the conservation and development of the natural resources of the crown, and projects comprising forestry and mining and prospecting, etc. Another post-war measure is the provision of Dominion financial assistance to the provinces for vocational training on a basis equivalent to the secondary school level.

All projects will be carried on under agreements with the Provincial Governments with the Dominion paying a maximum of 50 per cent of the costs.

(10) MacLean's Building Review.

The Bill also sets up a Vocational Training Advisory Council to advise the Minister on the operation of the Act.

Standards adopted in welfare program for children of war workers

A schedule of standards to be put into effect in facilities and agencies providing for care of children of war workers was established at a meeting in Ottawa on July 7.

Convened by Mrs. Rex Eaton, Director of the Women's Division of National Selective Service, the meeting was attended by:

Mr. Paul Goulet, Associate Director, National Selective Service.
Dr. Jean Gregoire, Deputy Minister of Social Welfare, Quebec.
Mr. B. W. Heine, Department of Public Welfare, Ontario.
Mr. J. W. Band, Department of Public Welfare, Ontario.
Dr. K. S. Bernhardt, Acting Director, Institute of Child Study, Toronto.
Dr. George Davidson, Executive Director, Canadian Welfare Council.
Miss Marion Harlow, Nutritions Services.
Mr. N. S. Boyd, Man-power Records.

Under provisional agreements between the Federal government and the governments of Ontario and Quebec, arrangements were made to provide for the children of mothers engaged in war industries, foster-home care, day-nursery care for pre-school-age children, and the care of school children outside school hours on Saturdays, and during vacations.

The Ontario Government has approved the agreement, and Quebec has signified its intention of doing so.

Mrs. Eaton stated that the scheme is to be commenced as soon as possible, although it might be a matter of weeks, but the necessary provincial advisory committees and the local committees will be established immediately. The Director of the Women's Division also emphasized the importance of capable, interested workers, volunteering to staff the child-caring units, working under a minimum of two supervisors.

The meeting decided that the field of child care being organized is mainly professional, and will necessitate care of skilled assistants, whether voluntary or professional.

A director, paid and working full time in charge of each group of not less than 20 children, and possibly not more than 50, will be required to have field nursery and child psychology training, while her assistant will need adequate nursery school training.

It was considered that a minimum staff of five will be essential in a unit for supervising rest, play, and work of children in day nurseries. Other standards considered were: health, nutrition, daily rest, plant and equipment, and records.

It was agreed that standards for central administration centres will be set up after experience has given local committees, provincial advisory committees, and the federal government, a basis to appraise requirements.

In provision for health care, there will be physical examinations of children before their admittance to units, emergency first aid, and provision for isolation before a child's ill condition is medically checked.

A nutritional program will be adopted by the centres, the children to receive two or three good meals a day, as required. The committee agreed that the minimum size for a plant should be three playrooms, the size of these depending on the number of children, with adequate washroom, kitchen, and cloakroom facilities, a staff room and fenced outdoor playgrounds.

Each nursery will have whatever play equipment is necessary for a suitable program of play and study, as well as cots so that children may rest at certain intervals during the day.

The child-caring scheme was recognized as a rare opportunity for making behaviour records which could be of importance in future psychological work.

Extension of assistance to science students entering Canadian universities

Some 500 young men and women who have matriculated from secondary schools throughout the country will be aided in entering universities this fall in certain engineering and science courses, according to a recent announcement by the Minister of Labour, Hon. Humphrey Mitchell.

This plan is an extension of the Government's present program of student aid, and in most provinces will be financed by equal contributions from the Dominion and Provincial Governments. The proposal arises from the results of a survey of the requirements of the armed forces and war industry for technical personnel.

Students thus aided in their first year will be required to take courses acceptable to the Director of National Selective Service. In the main the greatest need is for students to enter physics, mechanical, electrical and civil engineering.

The selection of students will be made from those who have shown the best standing in mathematics and science subjects while at secondary schools. Aid will be given in accordance with the need of the individual as well as his academic record.

Assistance will take the form of loans or grants, and students will be required to sign

an agreement that they will make their services available in the war effort as required in the capacity for which they have been trained. Committees will be established in each Province representing the Regional Director of War Emergency Training of the Department of Labour, the Director of National Selective Service, the Provincial Department of Education and the university where the students may attend either by choice or by direction.

An effort will be made to contact top-ranking students through their examination records, but those who require aid, and who have taken a good standing to date, may apply direct to the Office of the Director of National Selective Service, Motor Building, Ottawa, if they are residents in the Province of Ontario. In Quebec they apply to the Provincial Secretary. Students living in other Provinces should apply to the Department of Education of their home Province in the first instance. This step has become necessary in order to maintain the necessary reserves of technical personnel in training for the requirements of the armed forces and war industries.

Progress in establishment of labour-management co-operation in Canadian industry

From several sources the necessity for labour-management co-operation in the increasing of war production and in the promotion of improved industrial relations as an enduring factor in industry has been emphasized.

The first step in this direction was the establishment of Joint Production Committees in the aircraft industry. This action originated in a recommendation, dated December 23, 1941, from Aircraft Lodge No. 712 of the International Association of Machinists, addressed to Mr. Ralph Bell, Director-General of Aircraft Production, Department of Munitions and Supply, which stated:

"Believing that nothing less than complete government-management-labour co-operation will suffice to bring about maximum production, Lodge 712 is ready to put every effort into bringing this about."

Following this recommendation, the first Joint Production Committee was set up in January, 1942, in Fairchild Aircraft Limited (of Canadian Vickers Ltd.) and Noorduyn Aviation Ltd.

Then, at its 1942 convention in Toronto, following an address by Mr. Elliott M. Little, Director of National Selective Service, the Canadian Manufacturers' Association adopted the following resolution:

"In order that the constructive benefits being experienced through employer-employee co-operation in many plants may be extended, it is recommended that full co-operation between employers and employees be developed in the manner best suited to individual concerns so as to achieve maximum production and an allout effort to win the war."

To more clearly define and promote a program for better employer-employee relations, a section is in process of organization in National Selective Service. The purpose of the section is to indicate the benefits of better relations, not only in terms of increased production for war purposes, but in the solution of future problems involving both labour and industry. Progress is already being made on the formation of management-labour production committees in several plants as one of the immediate problems of war production.

Decisions of National War Labour Board

Of the 169 cases in which Findings and Directions were delivered by the National War Labour Board to June 30, 1942, 96 had to do with wage increases, 20 with cost of living bonuses and 53 were miscellaneous. Of the wage cases, 91 were granted in full or in part and 5 were refused. Of the cost of living bonus cases 19 were granted and one was refused. Of the miscellaneous cases 46 were granted and 7 were refused.

Of the cases dealt with, 118 applications originated with employers, 27 with employees and 24 were made jointly.

An additional 22 cases were closed as not requiring a decision, and 7 cases were sent to Regional Boards as coming within their jurisdiction.

Order *re* control of employment of persons loading and unloading ships

The following Order in Council (P.C. 6004) establishing regulations respecting employment of persons engaged in loading and unloading of ships was passed on July 13:

Whereas the Minister of Labour reports that it is desirable in the interests of public safety and the protection of property that the employment of persons engaged in the loading and unloading

of ships should be carefully controlled for the duration of the war and that no such provision has been made at certain ports;

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under the authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, is pleased to make the following regulations and they are hereby made and established accordingly.

REGULATIONS

1. The Minister of Labour shall have power to issue orders prescribing a system of work permits for the employment of persons in the loading and unloading of ships at any port he may designate and to make such arrangements as he deems necessary for the issuance and revocation of such permits. Such orders shall become effective upon publication in the *Canada Gazette*.
2. The Unemployment Insurance Commission, the Director of National Selective Service and the Royal Canadian Mounted Police shall furnish such assistance as the Minister of Labour may require in the establishment and administration of any such system of work permits.
3. The official designated by the Minister of Labour to supervise the establishment and administration of such system of work permits at any port shall, if practicable, arrange for the appointment of a joint committee representative of the employers and employees concerned to advise him about the establishment and administration of such system.
4. Any person who contravenes or fails to comply with any provision of any order made under authority of these regulations shall be guilty of an offence and liable upon indictment or summary conviction to imprisonment for a term not exceeding twelve months with or without hard labour, or to a fine not exceeding $500 or to both such imprisonment and such fine.

Retirement of Gerald H. Brown as Assistant Deputy Minister of Labour

The retirement, on superannuation, of Mr. Gerald H. Brown as Assistant Deputy Minister of Labour, effective July 31, marks the official termination of a career spent in the service of the Department of Labour for the past thirty-three years.

As Assistant Deputy Minister of Labour, he has been continuously in touch with labour problems in Canada under 14 successive ministers of labour since 1909, and has assisted in the framing and administration of much of the labour and social legislation of the past three decades. As Canadian government delegate to the International Labour Conference of the League of Nations, he has participated in the preparation of conventions relative to working conditions, social insurance, etc., which were adopted and in effect prior to the war, practically all over the world.

The administration of the Government's fair wage policy was under Mr. Brown's direction since its inception, and during the past two years he has been in charge, under the Minister of Labour, of the administration of the Industrial Disputes Investigation Act. Since the death last fall of M. S. Campbell, chief conciliation officer, he has had general oversight of the federal conciliation service for the prevention and settlement of labour disputes.

In 1940 he was in charge of the drafting of the Unemployment Insurance Act, and during the first year of the war was responsible for the preparation of a number of orders in council in regard to labour matters.

Mr. Brown's work took him into all of the provinces of the Dominion and on numerous occasions he represented the government of Canada on official missions to the United States and to great Britain, France and Switzerland, with occasional visits to Germany and Italy.

Prior to entering the Government service, Mr. Brown was correspondent for several Canadian, United States and British newspapers in the Parliamentary Press Gallery at Ottawa, and is a former president of that section of the Fourth Estate.

He is also a former president of the Men's and Women's Canadian Clubs of Canada and of the Ottawa Canadian Club, as well as of the Ottawa branch of the League of Nations Society. One of the founders in Canada of the Boy Scouts Association, he was its honorary Dominion secretary for many years. His interest in civic affairs found scope in the Civic Playgrounds Commission of which he was chairman for fourteen years.

M. M. Maclean appointed Chief Conciliation Officer Department of Labour

The appointment of M. M. Maclean of Ottawa, and prominent in Canadian Labour organization, as Chief Conciliation Officer of the Department of Labour, effective from August 1, was announced on July 17 by the Hon. Humphrey Mitchell, Minister of Labour.

This appointment, which was approved by the Civil Service Commission, brings into the national service at a critical time, an officer of proven experience and outstanding ability in the field of conciliation work and in the negotiation of labour agreements.

The new chief of the Department's Conciliation Service was born at Lansdowne, Pictou County, Nova Scotia, in 1887. He entered the service of the Intercolonial Railway in 1903. He was one of the founders of the Canadian Brotherhood of Railway Employees, and in 1908 became its first secretary-

treasurer. Resigning this office in 1913, he later was engaged in the newspaper business in Halifax. In 1917, he was invited to return to the position of secretary-treasurer of the Brotherhood, and in the same year was elected Editor and Manager of its official publication. He has been opposed for election to these offices only once in the thirty years during which he held these positions.

As a labour editor he advocated the broadening of his organization on a national basis, and suggested editorially in the Canadian Railway Employees' Monthly the formation of a national centre for national and independent unions which culminated in the organization of the All-Canadian Congress of Labour in 1927. He served on its Executive Committee for a number of years. Subsequently, in 1940, he drafted the principles on which the international industrial unions and the All-Canadian Congress of Labour unions agreed to amalgamate, and has since then been a member of the Executive Committee of the Congress.

These practical contacts—dating to 1910 when he was Secretary of the General Grievance Committee of his Brotherhood on the old Intercolonial Railway—gave Mr. Maclean wide general experience in the negotiation of collective agreements and in conciliation work. He has represented his organization before numerous Boards of Conciliation, and for a number of years was a member of Canadian National Railway Employees' Board of Adjustment No. 2. More recently he has represented various Canadian Congress of Labour unions before Boards of Conciliation and Commissions.

In 1913 he married Edna Scriven of Halifax. Their family is decidedly an active service family. One son, Kenneth, who was a sergeant-observer in the R.C.A.F., was killed in action overseas in September, 1941; another son, Murray, is also a sergeant-pilot in the R.C.A.F.; a third son, Murdock, is now a probationary Sub-Lieutenant with the R.C.N.V.R., while their only daughter was recently married to Lieutenant Jack Calcutt of the Armoured Tank Corps.

As an indication of the Chief Conciliation Officer's labour contacts, he was holding the following positions at the time of his appointment:

National Secretary-Treasurer, Canadian Brotherhood of Railway Employees and other Transport Workers; Editor and Manager of its official publication, The Canadian Railway Employees' Monthly; Managing Director and Secretary-Treasurer, Mutual Press Limited, Ottawa; Executive Committee Member, Canadian Congress of Labour; representative of the Congress on the Unemployment Insurance Advisory Committee and the Minister of Labour's Consultative Committee.

Industrial Disputes Investigation Act

Five applications for the establishment of Boards of Conciliation and Investigation were received during the month of June and one board was established. Two applications, which did not meet the requirements of the statute, were rejected. Five disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and four reports were received from Commissioners during the month.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 761.

Supplement on Prices in Canada

"Prices in Canada and Other Countries, 1941" has been issued as a supplement to the June issue of the LABOUR GAZETTE. It deals with the movement in retail prices and the cost-of-living as well as with wholesale prices in Canada during 1941 and previous years. Statistics are also given showing the movement of prices in certain other countries throughout the world.

A supplement "Wages and Hours of Labour in Canada" will be issued with a forthcoming number of the LABOUR GAZETTE. A table of index numbers for the period 1901-1941 was given in the issue for May on pp. 632-34.

Report on Labour Legislation in Canada

The Report on Labour Legislation in Canada which has been issued annually by the Department of Labour since 1915 will not be published this year. Legislation enacted in 1941 and 1942 will be included in one report to be issued early next year.

Inter-American conference on social security

Delegations from the United States, Canada and Mexico, as well as from all the Central and South American countries, are expected to be present at the Inter-American Conference on Social Security in Santiago, Chile, in September, according to a recent announcement by Edward J. Phelan, acting director of the International Labour Office, which is in charge of the technical preparations for the meeting.

Chief purpose of the conference is the establishment of closer co-operation among the countries of this hemisphere in the field of

social security. Among its immediate objectives is the solution of such pressing problems as ways to meet the current shortage of hospital equipment and pharmaceutical products for health institutions.

Attending the conference will be a number of leading figures in the social security field, together with delegations from the participating governments.

"The war has forced every country to utilise to the utmost its manpower and material resources, and social security services have been called upon to make a supreme effort to preserve and strengthen the health and productive capacity of the working population," Mr. Phelan pointed out.

"We expect the Santiago conference will furnish a unique opportunity to develop effective collaboration among the social security institutions of the Western Hemisphere and to set up a constructive program of action."

Canada will be represented by the Hon. W. F. A. Turgeon, Canadian Minister to Chile, and by M. J. Vechsler, Canadian Trade Commissioner in Chile.

Preventing strikes in India

The Government of India issued in March a general order applicable to all industries requiring that two weeks' notice be given of any intended strike or lock-out and declaring that if a dispute is referred to a Court of Inquiry or Board of Conciliation a strike or lock-out is illegal during the proceedings and for two months thereafter.

The Order was issued under the authority of a Defence of India Rule which empowers the Central Government to issue general or special orders referring industrial disputes to conciliation or adjudication and also prohibiting strikes and lock-outs. The Trade Disputes Act of 1929 stipulated that, in the case of public utilities, fourteen days' notice must be given before a strike or lock-out is begun. The Act also authorized the Central Government, in regard to railways and Government works and the local governments in regard to other undertakings, to issue orders requiring that industrial disputes be referred to Courts of Inquiry or Boards of Conciliation.

Joint Production Committees in British Engineering Industry—Employment of Women

Featuring the Conference of the National Committee of the British Engineering Union, held during the week of June 15, was the emphasis on production, as a result of which a ten-point program was adopted.

(The Production Ministries and the Ministry of Labour have regional representatives and the possibility of achieving greater co-ordination of the activities of these various representatives has for some time been under consideration. In recent months the Select Committee on National Expenditure set up by the House of Commons and a special committee established under the chairmanship of Sir Walter Citrine made extensive recommendations on the matter.)

The Amalgamated Engineering Union Committee included in its ten points recommendations that the Production Minister be given full power to operate a single plan for the control of industry, with the existing regional boards being given complete jurisdiction within their regions to organize and use productive resources and with joint production committees being organized in all factories. It was advocated that the union be accorded direct representation in all the stages, from the joint production committees through the regional boards to the central planning authority. In the other points it was recommended that piece-work prices be safe-guarded, that arrangements regarding shopping time and nursery facilities be extended and that welfare and canteen arrangements be improved.

The Committee also passed a number of resolutions relating to women workers. Union members were urged to give maximum assistance in training women both at the trade and in trade unionism, and to vote in favour of the admission of women to the union in a ballot which was then taking place. It was decided to approach employers for the establishment of the principle of equal pay for equal work and for a reduction of the period during which women receive less than the men's rate

---

Course in Industrial Accident Prevention.

The Extension Department of the University of Toronto has issued a volume containing the lectures given in the second course on Industrial Accident Prevention sponsored jointly by the University and the Toronto-York Division of the Industrial Accident Prevention Associations. The lectures were delivered between November 10, 1941, and February 24, 1942, by experts in the different branches of the subject and covered the following topics: industrial organization for accident prevention, safeguarding the working place, the influence of work conditions on health, personal protection, the mechanics, function and implication of compensation claim reporting, first aid and medical aid: clinics and rehabilitation, fire and its causes, the human factor in accidents, effect of poisonous substances in industry, workmen's compensation for industrial accidents, the industrial physician's part in the prevention and control of industrial accidents, and introducing the new man to the job.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of June five applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From employees of the Allison Logging Company, Limited, the Kelley Logging Company, Limited, J. R. Morgan, Limited, and Pacific Mills, Limited, Queen Charlotte Islands, B.C. The dispute, arising out of the employees' request for recognition of Local 1-71, International Woodworkers of America, as their collective bargaining agency and for a written collective agreement, was said to affect 497 workers directly.

2. From employees of the Anglo-Canadian Wire Rope Company, Limited, Lachine, P.Q., members of Lodge 1288, International Association of Machinists. Approximately 100 employes were said to be directly affected by the dispute, which has arisen out of their request for a new collective agreement providing for union recognition, wage adjustments and changes in the present system of holidays with pay.

3. From employees of the Plessisville Foundry, Plessisville, P.Q., members of the National Catholic Union of Foundry Employees of Plessisville. Approximately 275 employees were said to be directly affected by the dispute, which has arisen out of their request for union recognition and a collective agreement providing for increased wages and changes in hours of labour and working conditions.

4. From employees of the Shipbuilding Division of the Pictou Foundry and Machine Company, Limited, Pictou, N.S., members of Local 565, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America. The dispute, arising out of the employees' request for union recognition and a collective agreement in respect to wage rates and working conditions, was said to affect 450 workers directly and 1,100 indirectly.

5. From employees of the Mohawk Street Plant of Brantford Coach and Body, Limited, Brantford, Ont., members of Local 397, United Automobile Workers of America. Approximately 375 employees were said to be directly affected by the dispute, which has arisen out of their request for union recognition and a collective agreement.

Board Established

On June 5 a Board of Conciliation and Investigation was established to deal with a dispute between the McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and its employees, members of Local 1456, International Association of Machinists (LABOUR GAZETTE, June, 1942, page 660). The personnel of the board is as follows: Mr. A. B. Lumsden, chairman, appointed on the joint recommendation of the other two members; Mr. F. C. Sherwood, appointed on the nomination of the employees; and Mr. A. F. Bisson, appointed on the nomination of the employer. All three reside in Campbellton.

56615—2½

Applications Rejected

An application was received in May, 1942, from the Wabash Railroad Company, St. Louis, Mo., U.S.A., for the establishment of a Board of Conciliation and Investigation to deal with a dispute affecting engineers, firemen, conductors and brakemen in the company's employ in Canada, members of the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors and the Brotherhood of Railroad Trainmen (LABOUR GAZETTE, June, 1942, page 660). The Minister of Labour has decided that the matters in question do not constitute a dispute within the meaning of the Industrial Disputes Investigation Act and that, in the circumstances, a board will not be established.

An application was received in May, 1942, from employees of the Distillers Corporation, Limited, Ville La Salle, P.Q., members of the Federation of Commercial and Industrial Employees (LABOUR GAZETTE, June, 1942, page 660). Having ascertained the nature of the products of the plant in question, the Minister of Labour decided that this dispute does not fall within the scope of the Industrial Disputes Investigation Act, as extended by Order in Council, P.C. 3495, as amended. In the circumstances, the parties concerned were advised that a board could not be established.

Disputes Referred to Industrial Disputes Inquiry Commissioners

On June 10 Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, B.C., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Dominion Bridge Company, Limited, and employees in its Ordnance Plant, Burnaby, B.C., members of Local 2655, Steel Workers Organizing Committee, in connection with which an application had been received in May, 1942, for the establishment of a Board of Conciliation

and Investigation (LABOUR GAZETTE, June, 1942, page 660).

On June 11 Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Brunner Mond, Canada, Limited, Amherstburg, Ont., and its employees, members of Local 89, United Automobile Workers of America, in connection with which an application had been received in May, 1942, for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, June, 1942, page 660).

On June 13 Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized as Industrial Disputes Inquiry Commissioner, to investigate the dismissal of certain employees of De Havilland Aircraft of Canada, Limited, Toronto, allegedly on account of their membership in the United Automobile Workers of America. The Commissioner's report, received on June 30, stated that ten employees had been discharged on June 4 and 5. It was the opinion of the Commissioner that the laying-off of nine of these employees had been warranted by production conditions, but that discrimination had been shown one employee on account of his activity on behalf of the union. The Commissioner recommended that this employee be reinstated at the same rate of pay, the reinstatement to be effective as of the date of his discharge, and an order to this effect was issued by the Minister of Labour.

On June 18 Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, Toronto, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the alleged unjust dismissal of two employees of the Otis-Fensom Elevator Company, Limited, Hamilton, Ont.

On June 19 His Honour Judge I. W. Macdonell, Toronto, was appointed Industrial Disputes Inquiry Commissioner, to investigate a dispute between Dumarts, Limited, Kitchener, Ont., and its employees, members of Local 139, Packinghouse Workers Organizing Committee, in connection with which a strike had occurred on May 12 (LABOUR GAZETTE, June, 1942, pages 672-673, and article entitled "Strikes and Lockouts in Canada during June, 1942" appearing elsewhere in this issue).

Other Reports of Industrial Disputes Inquiry Commissioners

A report was received on June 6 from Mr. Bernard Rose, K.C., Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Rolland Paper Company, Limited, St. Jerome and Mont Rolland, P.Q., and its employees, members of Locals 454 and 455, International Brotherhood of Paper Makers, and Local 106, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (LABOUR GAZETTE, May, 1942, page 514). The Commissioner reported that, following conferences held by him with the interested parties, the employing company had undertaken to sign a union shop agreement effective for the duration of the war, the agreement to be submitted to the Quebec Regional War Labour Board for approval of the clauses affecting the remuneration of the employees concerned.

A report was received on June 10 from Mr. Bernard Rose, K.C., Industrial Disputes Inquiry Commissioner, on his investigation of the dismissal of certain employees of Viau and Son, Limited, St. Jerome, P.Q., allegedly on account of their membership in the International Moulders and Foundry Workers' Union of North America (LABOUR GAZETTE, June, 1942, page 661). The Commissioner reported that the employing company had stated that the employees in question had not been dismissed because of union membership but had been laid off because insufficient work was available to warrant their continued employment. The company gave an undertaking to the Commissioner, however, that these employees would be re-engaged as soon as sufficient work became available.

A report was received on June 12 from Mr. F. E. Harrison, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Burrard (Vancouver) Dry Dock Company, Limited, Vancouver, B.C., and its employees, members of Welders' and Burners' Unit No. 4, Amalgamated Building Workers of Canada (LABOUR GAZETTE, May, 1942, page 513). The Commissioner reported that he had been unable to effect a settlement of the dispute. Further steps were taken by the Minister of Labour with a view to bringing about a mutually satisfactory adjustment of the matters at issue, but at the end of the month a settlement had not been reached.

Report of Manitoba Boafd

The report of a Board of Conciliation and Investigation, set up under the Strikes and Lockouts Prevention Act of Manitoba, and dealing with a case of alleged dismissal for union activity and alleged refusal of an employer to bargain collectively, has been received from the Manitoba Minister of Labour, Hon. S. J. Farmer. The report is as follows:

In the matter of "The Strikes and Lockouts Prevention Act" and a dispute between: Building Products Limited, hereinafter referred to as the Employer, and Building Products Workers' Union of Canada, Local No. 1, Canadian Congress of Labour, hereinafter referred to as the Employees.

An application was received from the employees for a Board of Conciliation and Investigation dealing with the following matters in dispute, viz:

(1) Alleged dismissal of employee for union activities;
(2) Refusal of the employer to engage in collective bargaining through the chosen representatives of the employees.

A Board of Conciliation and Investigation was set up under the Strikes and Lockouts Prevention Act, the personnel of which was as follows: Professor W. J. Waines, University of Manitoba, Chairman; Alderman Stanley H. Knowles, Employees' representative; Mr. W. A. Johnston, K.C., Employer's representative.

The Board reported on July 8, 1942, as follows:

(1) That employees had not been dismissed for union activities, and had not been subjected to other discriminatory actions;
(2) That the parties had agreed to engage in collective bargaining and had signed an agreement by which the Employer "agrees to engage in collective bargaining with its Employees through their organization or representative representing a majority of its Employees whether or not such representative be an employee of the Company".

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1942.

THE following table shows the number of disputes, workers involved and time loss for June, 1942, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*June, 1942	54	16,069	41,232
*May, 1942	32	6,904	18,047
June, 1941	32	7,547	39,284

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition wichh is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts during June was considerably greater in number than in May or in June a year ago and the number of workers involved was over twice as great, the time loss was only slightly larger than a year ago but substantially higher than in May. Many of the disputes in June this year and last year caused considerable time loss. The important disputes during June involved boot and shoe workers at Quebec, P.Q., shipyard workers at Vancouver, B.C., distillery workers at Ville LaSalle (Montreal), P.Q., meat packers at Kitchener, Ont., steel workers at Trenton, N.S., and paper mill workers at Mont Rolland and St. Jerome, P.Q.

In May the more important disputes involved coal miners at Florence and Sydney Mines, N.S., meat packers at Kitchener, Ont., steel workers at Trenton, N.S., and bank clerks at Montreal, P.Q.

In June, 1941, the principal disputes involved hosiery workers at Toronto, Ont., electrical apparatus workers at Toronto and Hamilton, Ont., button workers at Kitchener, Ont., coal miners in Nova Scotia (three strikes), loggers at Cowichan Lake, B.C., steel plant workers at Montreal, P.Q. (two strikes), and painters at Quebec, P.Q.

Seven disputes, involving 516 workers, were carried over from May and 47 commenced during June. Of these 54 disputes 46 were terminated during the month. Twelve resulted in favour of the employer, 11 in favour of the workers, 18 were indefinite in result, three were partially successful and two were settled by compromises. At the end of the month, therefore, there were eight strikes or lockouts reported as in progress, namely: shoe factory workers, three strikes, Quebec, P.Q., distillery workers, Ville LaSalle (Montreal), P.Q., machinists and blacksmiths, Vancouver, B.C., dyers, Toronto, Ont., welders, Vancouver, B.C., and steam laundry workers, Moose Jaw, Sask.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that

employment conditions are no longer affected but which the unions concerned have not declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one dispute of this nature, namely: truck drivers and helpers, Toronto, Ont., October 7, 1941, to December 31, 1941.

A minor dispute involving 18 asbestos miners at Thetford Mines, P.Q., for two and one-half hours on April 29, 1942, was not reported in time for inclusion in the LABOUR GAZETTE for June. The employees desired an increase in wages but resumed work pending a reference to the National War Labour Board.

A minor dispute involved four men in a boiler tube manufacturing establishment at Crowland, Ont., in a stoppage of work for two days, commencing May 25. The workers demanded a production bonus on certain work. Work was resumed pending a decision of the Regional War Labour Board. The bonus was approved.

Particulars as to a strike of eight labourers in an abrasive manufacturing plant at Niagara Falls, Ont., on May 27 were not received in time to include it in the tabular statement. The men resumed work on May 29, the increase in wages in dispute being referred to the Regional War Labour Board.

A minor dispute involved about 40 labourers in a foundry at Longue Point, P.Q., in a stoppage of work for fifteen minutes on June 1 to obtain a ten per cent increase in wages. Work was resumed when it was decided to apply to the Regional War Labour Board for approval of the increase.

A minor dispute involved 20 assemblers in a metal products plant at Toronto, Ont., in a stoppage of work for about two hours on June 12, as a result of changes in work, alleged to reduce earnings. Work was resumed without concessions.

A minor dispute involved ten men in a scrap metal establishment at Winnipeg in a stoppage of work for one-half day on June 15, until the employer obtained permission from the Regional War Labour Board for an increase in wages.

A minor dispute involved ten truck drivers employed by a retail drug store at Montreal in a stoppage of work on June 26 to obtain an increase in wages. They were replaced within three hours.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to June

BEVERAGE PLANT WORKERS, TORONTO, ONT.—A number of employees variously reported as from 35 to 80, in one soft drink plant in Toronto ceased work on May 23 in protest against a reduction in staff, alleging that it involved discrimination against union employees, whereas the management stated that the reduction was made necessary owing to restrictions on the use of sugar. A deputation of employees then demanded reinstatement of the seven dismissed and recognition of the local of the Packing House Workers' Organizing Committee but this was refused. Most of those on strike had returned to work gradually by the middle of June and the others were reported to have obtained work elsewhere. Eight men were charged with unlawful assembly on June 1 as a result of trying to induce an employee to cease work, threats being alleged.

MEAT PACKING WORKERS, KITCHENER, ONT.—The employees had ceased work on May 11 in protest against the dismissal of two workers but reported for work the next morning, pending a meeting that afternoon. The plant, however, was closed, the employer stating that the stoppage had interrupted business and shipments of incoming livestock. The union to which the strikers belonged, the Packing House Workers' Organizing Committee, alleged they were locked out. Later the management notified a number of employees to resume operations and by May 26 122 workers were reported to be back at work, with 173 still out. Following a disturbance on June 2, when a number of men interfered with workers entering the plant, nine were charged with assault and intimidation. On June 18 as a result of conciliation by the Honourable Peter Heenan, Ontario Minister of Labour, and the federal Department of Labour, work was resumed, the dispute being referred to His Honour, Judge I. M. Macdonell of Toronto, to report and make recommendations. The 150 workers still out were to be taken back as required, no new employees to be engaged.

PAPER MILL WORKERS, MONT ROLLAND AND ST. JEROME, P.Q.—As stated in the LABOUR GAZETTE, for June the strike at Mt. Rolland on May 30, owing to a dispute as to overtime work and a demand for union recognition, was followed by a sympathetic strike of employees of the same company at St. Jerome on June 1. Both disputes were referred to an Industrial Disputes Inquiry Commissioner and it was arranged that the Company would sign union agreements. Work was resumed on June 5 in both plants.

STEEL FACTORY LABOURERS, WINDSOR, ONT.—A number of labourers in one department ceased work on May 30, an increase in wages having been refused pending a decision of the Regional War Labour Board. It was reported that the men intended to obtain work else-

where but seven returned after a week and the others later, the wage increase being granted.

Riveters, Sorel, PQ.—A number of riveters in one shipyard stopped work for a short period on May 30 to discuss an increase in wages. A reclassification of positions resulted in increases for many of them. Six workers, however, quit but returned on June 4 after which they were given increases in accordance with the schedule.

Disputes Commencing During June

Loggers, Menzies Bay, B.C.—The employees had sought an agreement between the management and a committee of employees and the payment of a cost-of-living bonus. An application was made to the British Columbia Department of Labour for a Conciliation Commissioner under the British Columbia Industrial Conciliation and Arbitration Act. The Commissioner appointed and the Secretary Registrar under the Act conferred with the parties, and the management, having questioned the status of the committee, a meeting of the employees was held to take a ballot. In the meantime the secretary of the committee had been dismissed for making a statement as to the bonus. A dispute arose as to the eligibility of those to vote and as to the matters in dispute and a ballot was not taken. The workers decided on a two day strike in protest and in favour of organization in a local of the International Woodworkers of America. The management closed the camp but re-opened it on June 11, when 90 resumed work. In the meantime the others had left to obtain work elsewhere.

Salt Miners, Malagash, N.S.—Employees ceased work on June 10 to obtain an increase in the wage scale, a cost-of-living bonus and time and one-half rates for overtime work. As a result of conciliation by a representative of the Department of Labour work was resumed after three days, the dispute being referred to the National War Labour Board. The Board approved a cost-of-living bonus of $1.53 per week and the overtime rates but not an increase in basic rates.

Asbestos Miners, East Broughton, P.Q.—Employees ceased work on June 19, for the payment of the cost-of-living bonus to all employees and because attempts to obtain an agreement with the National Catholic Union of Asbestos Workers had not been successful. A Board, under the Industrial Disputes Investigation Act, had been applied for on May 25, when conciliation of the Department of Labour had not resulted in a settlement. The National War Labour Board had approved the payment of a cost-of-living bonus but it was not paid to about 20 baggers, a question being raised as to whether they were employees of the company or of certain jobbers. Work was resumed on June 22, the dispute as to the bonus being referred to the National War Labour Board and that as to union recognition for further conciliation.

Flour and Feed Mill Workers, Goderich, Ont.—A number of employees in the feed department ceased work on June 19, against the transfer of workers from the flour department, reducing the hours to be worked. Work was resumed on June 26, their demands not being granted.

Distillery Workers, Ville LaSalle, P.Q.—Employees in one establishment ceased work on June 27 to obtain an increase in wages. An application had been made for a Board under the Industrial Disputes Investigation Act by the Federation of Commercial and Industrial Employees on May 23 (Labour Gazette, June, 1942, p. 660). As in this industry a Board can be established only on joint application from both parties and as the dispute was chiefly with reference to wages the applicants were advised to apply to the Quebec Regional War Labour Board. The Board did not approve of an increase as the wage scale was as high as any in the industry in the Montreal district. At the end of the month the strike was unterminated.

Shoe Factory Workers, Quebec, P.Q.—Employees in one establishment ceased work on June 22 to obtain the payment of a cost-of-living bonus claimed to be due since February. On June 23 another establishment became involved and on June 25 fourteen others, the workers on strike numbering approximately 3,000. The manufacturers contended that they could not pay a bonus owing to the price ceiling and a reduction in the subsidy from the Wartime Prices and Trade Board. As a result of conciliation by representatives of the Quebec Department of Labour and the Regional War Labour Board work was resumed on July 3, pending a decision as to the bonus by the Regional War Labour Board.

Cotton Factory Workers, Granby, P.Q.—Employees in one establishment ceased work on June 8, a request for wage increases not having been granted. As a result of conciliation by representatives of the Quebec Department of Labour work was resumed on June 11, it having been arranged that if production was increased the management would apply to the Regional War Labour Board for approval of certain adjustments. It was stated that under Ordinance No. 8 under

the Quebec Minimum Wage Act rates in the plant had been increased 22 per cent in January, 1941, that an application to the Board for a cost-of-living bonus had not been approved in view of the increase, also that production had fallen and should be increased to normal.

DYERS, TORONTO, ONT.—A number of employees in one textile dyeing establishment ceased work on June 9, their demand for recognition of Local No. 1 of the Textile Workers' Organizing Committee not having been granted. The management has recognized a shop committee but refused to negotiate an agreement with the union until most of the other employers in the industry would do so. An application for a wage increase had been made to the Regional War Labour Board, which approved the existing scale. The work was carried on by re-arranging the staff. At the end of June twelve men were reported to have returned to work. The other 59 were reported to be still on strike.

PAPER BAG WORKERS, EAST ANGUS, P.Q.—A number of girls ceased work on June 1 to obtain an increase in wages. A representative of the Regional War Labour Board was consulted, the management agreed to apply to the Board for a revision of the wage scale and work was resumed next day. These girls had not worked on the previous Saturday, not a regular work day, when employees were given an opportunity of making up time lost on a legal holiday. On June 18 most of the employees ceased work demanding recognition of their local of the National Catholic Unions, for the dismissal of a supervisor and for a wage increase, also for improved working conditions. A conciliation officer of the Quebec Department of Labour dealt with the dispute and it was agreed that the management would deal with a committee of employees as to working conditions, would discharge the supervisor complained of and seek an increase in wages from the Regional War Labour Board. An increase of four cents per hour was secured.

AUTOMOBILE FACTORY WORKERS, WINDSOR, ONT.—A number of employees ceased work for twenty minutes on June 2 when it was reported that wage rates of some men were reduced and that the decrease would apply to others. The United Automobile Workers of America, which has an agreement with the Company, stated that the reported decrease was a misunderstanding in applying a reclassification of work and a new wage scale and would be dealt with under the terms of the agreement, to be arbitrated, if not settled by negotiations.

STEEL FACTORY WORKERS, TRENTON, N.S.—Employees in two steel manufacturing plants, a car plant and a wheel foundry ceased work on the afternoon of June 2 and the morning of June 3, being not satisfied with wage increases approved by the Regional War Labour Board. The officials of the Steel Workers' Organizing Committee (United Steel Workers of America) induced the strikers to resume work on the next shift as an appeal for reconsideration could be made to the Board. In one of the steel plants 400 employees in one department ceased work on June 17 for increases in piece rates, although the management and the union officials were negotiating on the scale. They were advised by a representative of the Department of Labour and the union officers to resume work but did not do so until June 22.

PLUMBERS, ELECTRICIANS, ETC., QUEBEC, P.Q.—A number of plumbers, steamfitters, welders and helpers ceased work on June 8 to obtain increases in wages and on June 9 electricians and helpers also ceased work, while plumbers on another job ceased work also on June 9. The increases sought were from 65 to 85 cents per hour for plumbers, steamfitters and electricians, from 75 cents to $1 for welders and from 45 to 58 cents for labourers. After meeting with representatives of the Department of Labour and the Regional War Labour Board work was resumed on June 11. Later the Board approved of increases to the following rates: plumbers, steamfitters and electricians 75 cents, welders 90 cents and helpers 50 cents.

SHIPYARD WELDERS, VANCOUVER, B.C.—On June 12 a number of welders and burners in one shipyard, members of the Amalgamated Building Workers of Canada, ceased work following the dismissal of several of their number. The management had signed a closed shop agreement with the Boilermakers and Iron Shipbuilders of Canada on March 16. Welders claimed that a large percentage of those working belonged to the welders' unit of the former union and on April 1 applied for a Board under the Industrial Disputes Investigation Act. The dispute was referred to the western representative of the Department of Labour at Vancouver as an Industrial Disputes Inquiry Commissioner but a settlement was not effected. On June 16 the striking welders returned to work but were refused unless they joined the boilermakers' union. This was claimed to be a lockout. A number of the welders on strike, however, joined the boilermakers' union and were re-engaged. Approximately one hundred of the others were replaced. At the end of the month the dispute was unterminated.

A number of welders, members of the same union, working in a North Vancouver yard,

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to June, 1942				
MANUFACTURING—				
Tobacco and Liquors—				
Beverage plant workers, Toronto, Ont.	1	30	400	Commenced May 23, 1942; against dismissal of certain workers; terminated June, 15; return of workers and replacement; in favour of employer.
Animal Products—				
Meat packing workers, Kitchener, Ont.	1	173	2,700	Commenced May 11, 1942; against dismissal of two workers; teminated June 18; conciliation (provincial) and reference to Disputes Inquiry Commission; indefinite.
Pulp and Paper—				
Paper mill workers, Mont Rolland, P.Q.	1	250	1,000	Commenced May 30, 1942; for union recognition and *re* overtime; terminated June 4; conciliation (federal) union agreement to be signed; in favour of workers.
Metal Products—				
Foundry workers, Hamilton, Ont.	1	40	80	Commenced May 22, 1942; for increased wages; terminated May 24; return of workers; in favour of employer.
Steel factory workers, Windsor, Ont.	1	11	66	Commenced May 30, 1942; for increased wages; terminated June 6; return of workers pending decision of Regional War Labour Board; in favour of workers.
CONSTRUCTION—				
Building and Structures—				
Plumbers and steamfitters, Kitchener, Ont.	1	6	6	Commenced May 29, 1942; refusal to work with non-union workers; terminated June 1; negotiations; in favour of workers.
Shipbuilding—				
Rivetters, Sorel, P.Q.	1	6	24	Commenced May 30, 1942; for increased wages; terminated June 4; return of workers; in favour of workers.
(b) Strikes and Lockouts Commencing During June, 1942				
LOGGING—				
Loggers, Menzies Bay, B.C.	1	291	482	Commenced June 9; for argeement with employees' committee and *re* cost of living bonus; terminated June 11; conciliation (provincial); partial return of workers; in favour of employer.
MINING—				
Salt miners, Malagash, N.S.	1	108	216	Commenced June 10; for increased wages, cost of living bonus and overtime rates; terminated June 11; conciliation (federal); return of workers pending reference to the National War Labour Board; partially successful.
Asbestos miners, East Broughton, P.Q.	1	123	246	Commenced June 19; *re* cost of living bonus and union recognition; terminated June 20; conciliation (federal); work resumed pending reference of bonus to the National War Labour Board; indefinite.
Coal miners, Little Bras d'Or, N.S.	1	50	150	Commenced June 22; against employment of a new overman; terminated June 25; return of workers; in favour of employer.
MANUFACTURING—				
Vegetable Foods—				
Flour and feed mill workers, Goderich, Ont.	1	14	73	Commenced June 19; *re* change in working conditions; terminated June 25; return of workers; in favour of employer.
Tobacco and Liquors—				
Distillery workers, Ville LaSalle, P.Q.	1	700	3,500	Commenced June 27; for increased wages unterminated.

Custom and Repair—				
Dyers, Toronto, Ont.	1	10	15	Commenced June 12; for increased wages; terminated June 15; negotiations; return of workers pending reference to Regional War Labour Board; indefinite.
Business and Personal—				
Window cleaners, Montreal, P.Q.	1	100	200	Commenced June 3; for new agreement with increased wages; terminated June 4; negotiations; in fabour of workers.
Steam laundry workers, Moose Jaw, Sask.	1	59	118	Commenced June 29; for union recognition and agreement; unterminated.

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for annual review.

† In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 194 indirectly affected. *(b)* 950 indirectly affected. *(c)* Resumed work for half a day June 24.

where there was a closed shop agreement with the boilermakers' union, ceased work on June 16, apparently in sympathy with the others, but returned to work on June 17.

BOILERMAKERS, IRON SHIPBUILDERS, ETC., NORTH VANCOUVER AND VANCOUVER, B.C.—As a result of the two strikes outlined above the boilermakers, etc., ceased work on June 18 in both yards demanding the enforcement of the agreement. Work was resumed after a few hours in one yard and after half an hour in the other, when the management agreed to carry out the terms of the agreement.

MACHINISTS AND BLACKSMITHS, NORTH VANCOUVER AND VANCOUVER, B.C.—The machinists and blacksmiths ceased work in three shipyards on June 23 when notified that they were to take a week day off and work on Sunday in accordance with the provisions of an Order in Council of May 1 (P.C. 3636) to provide for seven day continuous work in shipyards in British Columbia. This plan had been accepted by nine of the eleven unions in the yard and these were reported to have made amendments to their agreements accordingly (LABOUR GAZETTE, May, 1942, p. 555 and June, p. 677). The machinists and blacksmiths continued to work under their agreements with overtime rates of pay for any work called on to be done at night, on Saturday afternoon or Sunday, until the strike on June 23. They resumed work on June 24 for the morning but ceased at noon. A delegation of representatives of various unions conferred with the Minister of Labour at Ottawa from June 26 to June 30 and presented a plan modifying the provisions. Following the return of the delegation the shipyard workers in Vancouver resumed work on July 4 to give the seven day work system a trial for a month.

The pipe fitters in one shipyard ceased work on June 24 for one hour in sympathy with the machinists and blacksmiths.

On June 25 an Order in Council was passed amplifying the provisions of P.C. 3636 and providing penalties for failure of employers or workers to comply with its terms. On June 30 an amendment was passed providing that this order should come into force on a date to be prescribed by the Minister of Labour. These orders are given elsewhere in this issue.

STEAM LAUNDRY WORKERS, MOOSE JAW, SASK.—Employees in one establishment ceased work on June 29 to obtain a union agreement with some changes in wages and working conditions. The employer had proposed an agreement with a committee of employees as another union had members in the plant. The provincial Department of Labour conciliated. The other union agreed to withdraw and on July 2 work was resumed in the evening, the employer having agreed to sign an agreement, subject to the approval of the Regional War Labour Board regarding the wage scale.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

A statistical review of strikes and lockouts in 1941 was published in the *Ministry of Labour Gazette* for May, showing 1,251 disputes beginning in the year. The number of workers involved in all disputes in progress during the year was 361,500 and the time loss 1,079,000 working days. Of the 1,251 disputes beginning in the year, 749 were over wage questions, 55 over hours of labour, 188 over the employment of particular classes of persons, 212 over other working arrangements, rules or discipline, 33 over trade unionism, 9 due to sympathetic action and 5 on other questions.

The number of disputes beginning in April was 83 and 5 were still in progress from the previous month, making a total of 88 disputes in progress during the month; 33,800 workers were involved in the disputes in progress

during the month and the time loss was 63,000 working days.

Of the 83 disputes beginning in April, 19 arose out of demands for increased wages and 2 over other wage questions; 4 over working hours; 7 over questions as to the employment of particular classes or persons; 28 over other questions as to working arrangements; two over questions of trade union principle, and two were sympathetic disputes. Final settlements were reached in 68 disputes, of which 10 were settled in favour of workers, 37 in favour of employers and 21 resulted in compromises; in 14 other disputes work was resumed pending negotiations.

In the strikes of coal miners at various mines throughout the country in May about half were reported to have resumed work by May 25. Subsequently it has been reported that others had returned to work while still others had gone on strike, approximately 20,000 being involved at the end of May. Toward the end of June it was expected that a recommendation for wage increases following an investigation would be accepted.

Australia

A number of coal mining strikes occurred during March and April. On March 28, 4,000 were reported to be on strike in four collieries in New South Wales. No information is available as to the settlement of these, but later other collieries became involved in disputes, and on April 8, approximately 3,000 were stated to be on strike in New South Wales coal mines. By April 22, work had been resumed at all collieries.

United States

A strike of 3,500 steel workers employed at pipe mills at Lorain, Ohio, began June 25. The strikers demanded certain wage adjustments. It was reported two days later that discussions were taking place regarding a settlement and no further information has been noted.

Eleven thousand employees of a motorized vehicle plant at Pontiac, Michigan, were on strike for one day, June 26, in a dispute over wages for time lost during a 20-minute blackout period. Most of the workers worked on the week-end to make up the lost time, and it was agreed that payment be made for the blackout time.

Four Great Lakes passenger vessels were tied up at Detroit, Cleveland, and Buffalo, from June 1 to June 5, when 2,500 employees of a navigation company struck after failure to negotiate the terms of a new agreement. The dispute was referred to arbitration and work was resumed June 5.

In New York City, 1,600 drivers and helpers engaged in the delivery of parcels for departmental and specialty stores were on strike from June 5 to June 24 when a new agreement was reached.

Recreation and Housing for Women War Workers

The Women's Bureau of the United States Department of Labor has recently issued a Bulletin (No. 190) suggesting standards and policies on this subject. It is pointed out that as the war has progressed the problem has become increasingly acute, both because of the large-scale migration of workers and because women workers have certain needs and interests somewhat different from those of men and are moreover generally in low-income brackets. Recommendations are made regarding recreation, housing, transportation, information on community facilities, health and medical care, and special social problems.

It is suggested that recreational programs "should give full opportunity for women to participate in planning and conducting their own activities, to develop leadership among themselves, and to co-operate as volunteers in service to the community where feasible." This co-operative aspect is considered particularly important in rural areas where facilities are restricted, and it is recommended that in both rural and urban areas programs should be carried on in connection with some well-equipped centre.

With regard to housing and eating accommodation the importance of convenient locations as well as cleanliness, comfort, etc., is emphasized. It is stated that room rent should not exceed 20 per cent of a woman's income, that single rooms or double rooms with single beds are preferable and that there should be a place for entertaining guests. Special transportation service should be given for women working on evening and night shifts.

Group hospitalization and medical schemes should be available and there should be special facilities for the care of unattached sick women in homes of other people. Education in regard to disease prevention should be carried on. Nursery schools, playgrounds, etc., should be available at convenient locations for the children of working mothers.

Facilities should be available to give women necessary information about an area before their arrival there and to prevent the migration of women to areas where they cannot get jobs. There are also recommendations about the qualifications of the personnel carrying out the various programs undertaken.

PRODUCTION IN BRITISH COLUMBIA SHIPYARDS

Minister of Labour Reviews Labour Situation in Announcing Appointment of Royal Commission—Three Shift Continuous Operation of Yards

ANNOUNCEMENT of the appointment of a Royal Commission (P.C. 5964 of July 13) to inquire into the most effective methods to ensure maximum production in British Columbia yards was made in the House of Commons on July 14 by the Hon. Humphrey Mitchell, Minister of Labour. (The situation in the British Columbia yards was reviewed in the June issue or the LABOUR GAZETTE, page 677). That part of the Minister's announcement indicating the nature of the inquiry and the steps leading up to the appointment of the Commission is taken from *Hansard* as follows:

A commission has been appointed under the Inquiries Act to inquire into the means of securing maximum production in the British Columbia shipyards. The commission will report on methods of increasing the output of ships, and on a plan for the operation of the yards six days in the week which was submitted by a deputation representative of the shipyard employees. Specifically the terms of reference of the commission are:

1. To examine into the operation of the plan of continuous operation now in effect and to give due consideration to the substitute plan submitted by the deputation.

2. To inquire into any factors now impeding production in the shipyards of British Columbia and as to the most effective means of securing maximum production in such shipyards.

3. To report on the foregoing.

The chairman of the commission is the Hon. Mr. Stephen Ellswood Richards, of Winnipeg. There are two members representing employers and two representing employees. The employer members are Mr. Don Serviss, general manager of North Vancouver Shipyards, and Mr. Hugh Lewis, general manager of South Yard, Burrard Dry Dock, Vancouver. The employee representatives are Mr. Chris. Pritchard, of the United Association of Plumbers and Steamfitters and President of the Metal Trades Council, Vancouver; and Mr. A. A. McAuslane, Vice-President of the Canadian Congress of Labour, Vancouver.

In announcing the appointment of the commission I wish to state that the Minister of Munitions and Supply and myself are resolved that all steps necessary to secure the greatest possible output of ships from the yards in British Columbia shall be taken. No doubt changes in the existing procedures of management and labour will be necessary, but in the present dire need for vessels to carry the tools of war to the battle fronts, nothing can be permitted to stand in the way.

In March I visited the shipyards on the Pacific coast and conferred with representatives of the managements and of the employees. As a result of these conferences a plan was proposed for the continuous operation of the yards. Three shifts were to be established, and operations were to continue twenty-four hours a day, seven days a week, but each employee was to have one day of rest in seven. After further conferences I left Vancouver feeling that all parties were agreed on the adoption of this program. I am glad to be able to say that nine unions, representing about 95 per cent of the employees of the coast shipyards, accepted the plan and entered into supplementary agreements for its adoption. Two unions declined to enter into these agreements, despite a request from the unions that entered into the contract that they should do so. The failure of a small minority group to co-operate in this plan for greater production of ships and, I think I may add, one or two missteps on the part of certain of the managements, prevented the plan from being brought into full application. This had a disquieting effect on the members of the unions which did sign the agreement. Members of the non-co-operating unions were not in their places on Sunday, while members of the co-operating unions reported for work with the feeling that they were being subjected to discrimination.

In these confused circumstances a joint conference of shipyards unions was organized. This body developed an alternative plan for six days' operation a week, which, in their view, would prove as effective in promoting production as the plan of continuous operation. The joint conference of shipyards unions prepared a brief in support of their plan, and a deputation from the conference came to Ottawa to discuss it with me. I met the deputation on June 27 and 29. In these negotiations I was impressed by the sincere desire of the representatives of the workers to co-operate in any effort which would promote greater ship production. I pointed out, however, that the brief they had submitted had many implications which would take some time to

explore. Obviously I would have to discuss their plan with my colleagues interested in the shipbuilding program and especially with the Minister of Munitions and Supply. I requested the delegation to urge upon the shipyard employees in British Columbia that they should give the plan of continuous operation a thirty-day trial. I agreed that if this were done, their representations for an alternative scheme would be carefully considered, and my decision would be rendered as nearly as possible within thirty days.

It is very gratifying to me that the members of the deputation entered into this undertaking, and I can now report that all employees in the coast shipyards have accepted the recommendations of their representatives and that the yards are now building ships twenty-four hours a day, seven days a week.

The commission to which I refer will begin its investigations in Vancouver on July 20.

I am confident that the members of the commission will concentrate on the one all-important question of how to build the utmost possible number of ships in the shortest possible time, and that they will submit a constructive report.

I should like to point out to the house that, despite various allegations on the irresponsibility of trade unions, in this case a group of trade unions in a very important industry under the guidance of responsible national leaders have met a crisis in one of the most serious phases of our war effort in an altogether creditable manner. I am confident these men will give Canada all they have to give in the production of ships. . . .

May I also point out that this has been called at the coast the Mitchell plan. It is quite true that I had negotiations there with both employers and employees, and I think it is fair to say that the arrangements made were made in pursuance of the negotiations, in that the employers and the employees in the British Columbia shipyards, seeing the urgency of the situation, agreed to this seven-day operation without any coercion from the federal government. It was unfortunate, I think, that, mistakes having been made by certain employers and certain trade unions, the plan was not given the trial which in my judgment was necessary in view of the desperate situation in which this nation and all the united nations are placed at the moment with respect to shipping to carry the products of this country, both food and war materials, to those who are really fighting the battle of democracy and of freedom.

The Minister's formula for the continuous operation of the yards is set forth in the following table:

Shift	Daily Hours worked
First	8 hours
Second	7 hours 40 m.
Third	7 hours 10 m.

Time Off for meals	Time Worked per week	Time Paid for
30 min.	48 hrs.	50 hrs.
20 min.	46 "	54 "
20 "	43 "	54 "

It is provided that each employee shall work in one shift during six days in each calendar week and shall be entitled to one full day of twenty-four consecutive hours of rest in each such week.

Employment of Girls on Government Contracts in the United States

At the request of the U.S. Secretary of War, the 18-year minimum age established by the Walsh-Healey Act of 1936 for the employment of girls on federal Government contracts was relaxed by the Secretary of Labour under the authority of the Act on April 21, 1942. The minimum age for boys under the Act is 16 years.

Girls of 16 and 17 years of age may now be employed under certain conditions in the following industries: food processing, leather products, boots and shoes, rubber products, photographic equipment and supplies, chemical drug and allied products, surgical and scientific instruments, optical instruments, arms and ammunition, electrical manufacturing, plastic products, safety appliances, machinery and allied products, converted paper products, and fabrication of metal products.

Such girls may not work more than eight hours per day or between 10 p.m. and 6 a.m., and they must be paid not less than the minimum hourly rate fixed under the Fair Labour Standards Act or the Walsh-Healey Act. They may not be employed in any occupation declared hazardous under the Fair Labour Standards Act and thus, though their employment is now permitted in the arms and ammunition industry, they are nevertheless not exempted from the application of the Hazardous Occupations Order which prohibits minors under 18 from working "in or about plants manufacturing explosives or articles containing explosive components".

WAR INDUSTRY AND MAN-POWER SITUATION IN CANADA

Director of National Selective Service Reviews Establishment of Controls—Immediate Future Requirements Necessitate Registration of Unemployed Women

CANADA'S labour shortage is complicated by the need for 250,000 additional workers within the next five months to fill the requirements of the three armed services and continually expanding war industry. The sources of supply include some 60,000 partially employable men who are now listed as unemployed, women, and a considerable number of men already employed in non-essential industries.

This is the current picture of the war industry and man-power situation in Canada given by Elliot M. Little, Director of National Selective Service, in an address to the Ottawa Rotary Club in mid-July. He also told how National Selective Service, during the last four months, has set as its objective the reduction of the problem to a hard, statistical basis.

"Obviously," he said, "you can't fit the pieces of a picture together with a lot of pieces missing. You can't draft any national plan for the most efficient use of our man-power unless you know how much and what kind of man-power is available and what the jobs are that are absolutely essential to winning this war. We are beginning to see the definite lines of the problem facing us today. We know the names, occupations and locations of the vast majority of people who are working in this country as a result of the registration of April 1 last. We also know the names, locations and approximate employability of the few thousand unemployed males in this country. In another few weeks we will also have a registration of unemployed females, at least within certain employable age groups.

"To keep that information up to date on a day-to-day basis, so it was known exactly where everybody was working all the time, a month ago an order was issued permitting control of all employment. We do this by requiring that all jobs must be obtained through the government employment offices. For the moment, this order requires little more than a recording of each employment engagement, but this is only while these offices are adjusting themselves to this tremendous new load. As soon as the administrative machinery is functioning smoothly, and because the labour situation is now tightening rapidly, we will tighten the operation of this control. We will then consider each case of employment on its merits *before* giving approval to a man or woman to take a job or allowing an employer to engage a man or woman. Having established the controls, we are in a position to intensify our directive efforts as the needs of the time and the locality dictate. We will tighten the reins when and where necessary."

Results of Registration of Unemployed Males

The Director observed that there had been a lot of guesses as to the number of unemployed remaining in Canada, and added: "We made some guesses on our own account, but I must confess we did not come too close to the mark. The registration of unemployed males conducted six weeks ago—and now kept up to date from week to week—revealed approximately 80,000 unemployed males in this country between the ages of 16 and 69 inclusive. Don't let's be fooled even by that figure. That 80,000 includes thousands of men who are actually unemployable. It includes other thousands of men who are only partially employable, and on very light and simple work. It includes thousands of retired men who voluntarily quit working years ago. It also included a number of skilled workers, especially in the building trades in some localities, who were only temporarily out of work at the time the registration was taken. Roughly 25 per cent. of that total of unemployed are completely unemployable. That leaves out of the 80,000, not more than 60,000 even partially employable and few of those are capable of being employed in such high-speed production as we have in our war plants of today.

"As our demand for efficient man-power for war industry continues to expand we must draw most of that increase from other sources than the pool of unemployed males. We must review carefully the essentiality of the work being done by every Canadian. We must determine whether that job can be done away with and the man or woman transferred to a job which will more directly benefit the war program. A substantial movement of this sort has been under way in varying degree since the war started. To date it has been haphazard, insofar as the labour factor was concerned because the determining factor was whether or not raw materials were available for that particular manufacture. As workers have been released from plants slowed down or closed down by such materials shortages, they have in most cases been readily absorbed into near-by war industry. I say that has gone

on but it has been only haphazard as far as labour was concerned. It can no longer go on haphazardly.

Absorption of Lay-offs

"In National Selective Service we are keeping closely in touch with the materials' controllers in the Department of Munitions and Supply and the Wartime Prices and Trade Board, so that as far as possible we can plan ahead for the employment of workers who will be released because of new rulings and restrictions by these materials control agencies. We are also requiring employers to forecast as precisely as possible, and as far ahead as possible, their prospective lay-offs because one employer's lay-off is another employer's supply. We cannot afford to waste one-man-hour of effort where that is humanly avoidable.

"These more or less automatic releases of workers are a substantial contribution to our wartime labour pool, but we are now reaching the stage where we must also consider the necessity of closing down some industries altogether, regardless of whether they have available raw materials, so their workers may be diverted into more useful channels. The extent to which we will have to apply this kind of control to the less essential civilian industries will probably vary with the war labour needs of the different localities."

Much of the increase in industrial employment in the coming months would have to consist of women—"women doing jobs which industrialists thought could only be done by men," Mr. Little continued. "This is war and I tell you that the young employable women in this country have proven they know there's a war on. They have proven their worth and ability amply by the way they have carried out the tasks they have assumed in industry." But more and more women would be needed and it would be necessary to regulate their entry into industry with a minimum dislocation of home and community life. One means of meeting that problem was the establishment in some provinces of day nurseries for the care of the children of working mothers.

Problem of Absenteeism

"There is a final source of man-power to which we must give greater attention from now on" Mr. Little said, "That is by making the most efficient use of our man-power after we have assigned it to its proper place in the production scheme. We have been wasting tens of thousands of man-hours through people wandering around from job to job merely for a few cents an hour more or because they don't like the colour of the boss's eyes, instead of sticking at the job they have learned to do easily and well. We have been wasting thousands of man-hours through inexcusable absenteeism. Just because it is raining out maybe the worker decides to take the day off. That means that to maintain production in even flow, his plant must keep on hand at all times a surplus of labour to take up the slack. That surplus labour might better be employed steadily at full-time production itself. Absenteeism in too many plants averages from 15 to 25 percent. It's time we looked on the solution of that problem as a major source of additional man-power."

Expansion and Labour Supply

After discussing these sources of labour, the Director dealt with the rapid expansion of war industry. He said: "To meet the carefully estimated needs of the three armed services, and continually expanding war industry, we must find more than 250,000 workers within the next five months. Think what that means—a quarter of a million workers, and they don't come out of thin air. The vast majority of those 250,000 plus are going to come out of jobs—jobs they are holding now. They will be diverted either into the armed forces or essential industry. We must also bring more women into industry at a rapidly accelerating rate. Think what that means in planning, in the setting up of reasonable priorities in industry and in labour. Some business enterprises will undoubtedly become war casualties.

"Having determined the possible sources of additional labour, and having obtained estimates of needs for the next five months, our job obviously is to fit available supply in with essential demand. That is not easy. For example, the latest reports from the employment offices showed, 3,562 vacancies for skilled tradesmen at Chicoutimi in Quebec. There were just 66 suitable men listed as available. Sixty-six against 3,562. And that does not include jobs for 400 unskilled workers and no one available in the area to fill any of them. The closest indicated surplus of labour to Chicoutimi was in Montreal."

The question, he continued, was whether to go to Montreal and take 3,500 men who might be needed in that city where industry is growing from day to day or to go to less industrialized areas, such as the Prairies, for men. That was one typical problem. Another existed in the coal industry. In British Columbia, Alberta and Saskatchewan mines there was a shortage of miners due to enlistments and more attractive working conditions in war plants. Yet in the Maritimes coal miners were idle because the war placed restrictions on water

transportation of coal to central Canada. Still another problem was caused by the lack of housing in areas where men were badly needed.

"These are just a few of the sort of 'headaches' involved in trying to devise and apply an integrated national plan for the most effective use of our man-power", Mr. Little said. "One of our basic problems at the moment is to determine the means by which workers can best be moved from one occupation to another and even from one area to another. You might think that the easy way would be to decide upon compulsory transfers. I would remind you that you can drive a man to a machine but you can't make him work—at least not well. For maximum production, there is no substitute for the zeal of the worker who understands the significance of his job, and who is encouraged to carry out that job to his maximum ability by the co-operative and understanding attitude of his employer. You can't get away from the fact that there is a world of difference between what a person must do to earn a given amount of money and what he can do if his heart is in his job."

PROTECTION OF MAN-POWER IN CHILE

The protection of the national man-power has become "the watchword in every field of public welfare" in Chile, it is declared by Dr. Manuel de Viado ,of the Social Insurance Department of the Chilean Ministry of Health, in an authoritative article appearing in the August number of the *International Labour Review,* monthly publication of the International Labour Office.

This fundamental conception, Dr. de Viado says, is slowly being defined in greater detail "as medicine becomes more and more of a state function and as the successes and failures of sickness insurance bring out more clearly what social security can accomplish in a Latin American country."

Dr. de Viado's article discusses "the aims and achievements of the Chilean Preventive Medicine Act", which is considered to be one of the most advanced pieces of social legislation enacted in this hemisphere, according to the I.L.O. Publication of the article is of particular interest at this time, the I.L.O. points out, in view of the fact that delegates from all the Latin American countries, the United States and Canada will gather in Santiago, Chile, on September 10 for the Inter-American Conference on Social Security.

There is no reason to be surprised at this phenomenon, Dr. de Viado says. He explains that the South American countries, which are largely rural in character and whose economy is as a rule based on the exploitation of one or two agricultural or mining products, are compelled to place medical and health problems in the foreground "because of the importance of demographic factors to their development."

From 1933 on, a number of technical studies of Chilean social conditions were carried out, Dr. de Viado explains, with the result that the Preventive Medicine Act was adopted in 1938. The main principles embodied in the Act, he lists as: "(1) The fight against those diseases which are collective in character and constitute a social danger; (2) With respect to these diseases, special action against those forms which are economically worth curing, effective treatment being possible; (3) The constant effort to turn the medical machinery and the capital used to the best possible account."

"Thus," Dr. de Viado says, "attention will be given the tubercular patient who may transmit his disease but not to the diabetic; to the primary and secondary forms of syphilis, which can be cured rapidly and cheaply, and not to the later consequences which are ten times more costly to treat while the results are uncertain; to the medical action of official institutions within the strict rules of controlled medical work, and not to private medicine, since treating one patient is not the same thing as treating a million."

The chief features of the Act are set out by Dr. de Viado as follows:

(1) Periodical medical examinations are now carried out systematically and free of charge for the great majority of the 1,500,000 workers and salaried employees in the country.

(2) Social insurance institutions are obliged to set up medical services or enter into agreements among themselves for such services.

(3) The system of preventive rest has been introduced as an essential means of saving the sick worker from tuberculosis, treating him rapidly for syphilis, or prolonging his working life in the case of heart disease.

(4) Payment is made during the period of such rest of an allowance equal to the patient's full wage, the only time limit to the allowance being determined by the prospects of recovery.

(5) The patient is guaranteed his job while taking preventive rest and for six months after recovery.

(6) Submission to treament is made compulsory.

CONSOLIDATION OF WARTIME WAGES ORDER

No New Policy Involved—Changes Made to Aid Enforcement—Former Order Clarified and New Details Added

IN the light of experience gained since the Wartime Wages and Cost of Living Bonus Order, P. C. 8253, became effective eight months ago, it became apparent to the National War Labour Board that a revision of certain of the existing provisions of the Order and the making of additional regulations was necessary—particularly from the point of view of making the Order more readily enforced and removing inconsistencies.

No new policy is involved, however, and no changes have been made necessary in administrative procedure in respect of wage control or of the application of the Cost of Living Bonus payments as already established.

The Wartime Wages and Cost of Living Bonus Order has been amended several times since it originally became law. These amendments are incorporated in the new Wartime Wages Control Order, P. C. 5963, which supersedes P. C. 8253, but is in effect a restatement of the Government's wartime wages policy supplemented by certain additional details and the incorporation of provisions relating to the Government's Fair Wages and Hours of Labour legislation.

Wage Clauses Amplified

The wage clauses as set out in the former Order remain intact; but have been amplified and clarified to assist in securing complete compliance.

As under P.C. 8253, no employers, save those in a narrow range specifically exempted, are permitted, without the written authorization of a War Labour Board, to increase or decrease their basic scale of wage rates, or alter the terms of employment which were in effect on November 15, 1941.

Within the limits of a wage range established prior to November 15 last, subject to specified qualifications, employers may adjust wage rates without the direction of a War Labour Board.

Wage increases may be authorized by a War Labour Board *only if existing wage rates are found to be low* as compared with wages generally prevailing in the same or substantially similar occupations in a comparable locality, "having regard to all circumstances deemed by it, in its discretion, to be material."

If a Board finds that wage rates paid by an employer are enhanced as compared with rates generally prevailing for similar positions in a like locality, it may direct that the payment of a cost-of-living bonus shall be deferred in respect to the employees receiving the enhanced wage rate, or adjusted to such an amount as the Board finds fair and reasonable.

Payment of Bonuses

No employer may commence the payment of a cost-of-living bonus or increase or decrease the amount of a bonus already being paid except pursuant to general Orders to be issued quarterly by the National War Labour Board.

Every employer who is now paying a cost-of-living bonus must increase or decrease the amount thereof, and every employer who is not paying a bonus must commence the payment thereof, if required to do so by a general order of the Board.

The amount of cost-of-living bonus payable shall be calculated by the National Board at quarterly intervals, based on the rise or fall in the cost-of-living index numbers.

If or when a future quarterly revision of the cost-of-living index shows a rise of one full point or more over the index number for October, 1941, bonuses will be payable in an amount at the rate of 25 cents a week for each one point rise in the index for all adult male employees and all other employees employed at weekly wage rates of $25 or more, and one per cent of the basic weekly wage rates for male employees under 21 years of age and all female employees employed at weekly wage rates of less than $25.

Any employer who prior to November 15, 1941, paid to his employees any voluntary periodical bonus other than a cost-of-living bonus, may continue or discontinue the payment of such bonus, provided that, if payment is continued, the rate shall not exceed the rate established by practice for the year ending November 15 last; but no employer shall inaugurate the payment of any such bonus after that date.

Where an employer is paying a cost-of-living bonus to some employees and not to others, or is paying a bonus of different amount to other employees, a Board may direct him to pay or to increase or decrease the amount of the cost-of-living bonus being paid to such other employees in order equitably to adjust the amounts of such bonus in such manner as the Board deems fair and reasonable; provided that the amount of bonus shall not be increased in excess of a bonus properly calculated in accordance with the provisions of the order.

A War Labour Board may authorize an employer who has been directed to inaugurate the payment of a range of wage rates, or a single wage rate, to pay a cost-of-living bonus supplementary thereto in such amount as may be deemed fair and reasonable having regard to the cost-of-living bonuses being paid by other employers pursuant to a general order of the Board.

Collective Labour Agreements

Any provision of any collective labour agreement which is inconsistent with the provisions of the Order shall be brought into conformity with the Order.

Nothwithstanding any provision of any collective agreement with respect to working conditions, directly or indirectly affecting wages, either party to any such agreement may apply to the Board for the revision or suspension of any such conditions, and the Board is empowered to direct a revision or suspension thereof not inconsistent with the provisions of the Order.

Relation to Fair Wages and Hours of Labour Act, 1935

The section of the new Wage Control Order dealing with the Board's administration of the Fair Wages and Hours of Labour Act, 1935, is as follows:

32. (1) Any schedule of wage rates contained in labour conditions issued by the National Board pursuant to the provisions of the Fair Wages and Hours of Labour Act, 1935, may, if such Board deems it advisable so to do, in the place of establishing wage rates deemed by it to be fair minimum wage rates, establish ranges of wage rates deemed by it to be fair and may direct the payment of a cost-of-living bonus in addition to the wage rates established therein.

(2) If a range of wage rates or a single wage rate paid by an employer in respect of a job, position or occupational classification and forming part of the basic scale of wage rates paid by him on November 15, 1941, is lower than the fair minimum wage rate or range of fair wage rates required to be paid by him in accordance with a schedule of wage rates issued by the National Board pursuant to the Fair Wages and Hours of Labour Act, 1935, and this Order, in respect of such job, position or occupational classification, the employer shall increase such wage rates or single wage rate in accordance with such schedule but no employer shall by reason of any such schedule decrease any range of wage rates or single wage rate forming part of the basic scale of wage rates paid by him on November 15, 1941.

(3) The provisions of this Section shall authorize an employer to increase ranges of wage rates or single wage rates forming part of the basic scale of wage rates paid by him on November 15, 1941, only in respect of jobs, positions or occupational classification in respect of which fair minimum wage rates or ranges of fair wage rates are established by a schedule of wage rates issued pursuant to the Fair Wages and Hours of Labour Act, 1935, and during the period such schedule is applicable thereto.

(4) The National Board may, if it deems it fair and reasonable so to do, authorize the payment by an employer of a wage rate in excess of the highest wage rate in any range of wage rates established in any schedule of wage rates issued by it pursuant to the Fair Wages and Hours of Labour Act, 1935, or direct the establishment of a range or ranges of wage rates in any schedule of wage rates heretofore or hereafter issued pursuant to the Fair Wages and Hours of Labour Act, 1935, which established only minimum fair wage rates or direct the payment of a cost-of-living bonus in addition to such wage rates.

(The above section includes the provisions of Order in Council P.C. 5518 of June 29, 1942).

Offences and Penalties

The section dealing with offences and penalties, which has been considerably tightened, is as follows:

52. (1) Any employer, or officer or agent thereof, who contravenes or fails or omits to observe any of the provisions of this Order, or of any authorization, declaration, direction, order or determination of any War Labour Board given or made pursuant to this Order, shall be guilty of an offence and liable on summary conviction to a fine of not less than one hundred dollars ($100) and not more than five thousand dollars ($5,000).

(2) Each payment of wages or of a cost-of-living bonus in accordance with a wage rate or a cost-of-living bonus paid in contravention of any of the provisions of this Order, or of any authorization, declaration, direction, order or determination of any War Labour Board given or made pursuant to this Order, shall constitute a separate offence.

(3) In any prosecution under this Order, the burden of proof that the payment of any wages, or of any cost-of-living bonus or other bonus of any kind whatsoever to any employee, is not in contravention of the provisions of this Order or is not in contravention of, or is made pursuant to any authorization, declaration, direction, order or determination of a War Labour Board given or made pursuant to this Order shall be upon the accused.

53. Any employer who discharges or who threatens to discharge, or in any way discriminates against an employee who

(*a*) furnishes information in any application or investigation made under the provisions of this Order;

(*b*) has given any information to a War Labour Board regarding the wages payable to such employee or any other employee of his employer;

(*c*) has initiated or taken part in any application under this Order to any War Labour Board;

shall be guilty of an offence and shall be liable on summary conviction to a fine of not less than one hundred dollars ($100) nor more than five thousand dollars ($5,000); provided that it shall be a good defence to any prosecution under this Section if it is proven that the discharge or threat of discharge of or alleged

discrimination against any employee was done in good faith and not by reason of any act or conduct of the employee described in paragraphs (*a*), (*b*), or (*c*) of this Section.

54. Any person who does any act calculated or intended to interfere with the continuation of operations or production by any employer for the purpose of requiring such employer to do any act in contravention of the provisions of this Order or of any direction of a War Labour Board made pursuant to this Order shall be guilty of an offence and liable upon summary conviction to a fine of not less than fifty dollars ($50) and not more than one thousand dollars ($1,000).

55. (1) No prosecution shall be commenced under this Order except with the consent in writing of the National Board, provided that such consent shall be sufficient if the name of the accused is set out therein, and if it indicates that the National Board has consented to the prosecution of such person under this Order.

(2) No consent shall be given to any prosecution under this Order by a Regional Board.

56. The Minister of National Revenue shall disallow as an abnormal expense pursuant to Section 8 (*b*) of the Excess Profits Tax Act, Chapter 32 of the Statutes of 1940, and subsection (2) of Section 6 of the Income War Tax Act, the amount of any wages or bonus payments found to have been paid or certified to him by the National Board as having been paid in contravention of any of the provisions of this Order.

Copies of this Wartime Wages Control Order are available for distribution through the National War Labour Board, Ottawa.

ADMINISTRATION OF U.S. FAIR LABOUR STANDARDS ACT IN 1941

THE annual report of the Wage and Hour Division of the United States Department of Labor, covering the activities of the Division during the fiscal year ending June 30, 1941, states that the obpectives sought by the Fair Labor Standards Act of 1938 were attained to a very large extent in the period covered by this report. It reviews in considerable detail the work of the industry committees, and evaluates the economic effects of certain of the wage orders in so far as those effects can be ascertained. Also included is a summary of salient matters of interest in connection with the administration and enforcement to the Act in 1941.

Under the heading "Raising Wage Minimum by Wage Order", the report states that "significant progress was made during the fiscal year in raising wage minimum by wage order in selected industries to above the statutory rate of 30 cents an hour which has been in effect since October 24, 1939, for employees (unless specifically exempt) engaged in interstate commerce or in the production of goods for interstate commerce."

Twelve wage orders became effective during the year, which, together with 6 wage orders previously issued, brought direct wage increases to more than 700,000 workers who had been earning less than the wage minimum adopted.

Thirty-seven committees, acting for industries in which nearly 4½ million workers are employed, have been appointed since the Act became effective.

The principal means of enforcement of the Fair Labor Standards Act is the inspection of factories and other establishments believed to be subject to its provisions. The inspection involves an examination of the payroll and time records which employers are required to keep, and interviews with a representative number of the employees. If the inspection reveals that the establishment is not subject to the law the case is closed, and if it discloses that coverage applies but that no violations have occurred, the case is also closed.

In 1941 a total of 48,449 physical inspections were made and the cases closed. This represents inspections of more than 12 per cent of the estimated 360,000 establishments subject to the Act.

Of the 48,449 closed cases, 31,493 revealed violations, but only 18,975 involved violations so serious as to require the payment of restitution. Civil action was required in 1,737 cases and criminal prosecutions in 48.

The total amount of restitution found due was $10,916,527 owing to 354,271 employees, of which $7,392,013 had been paid during the fiscal year. Information concerning complaint and routine cases, litigation, cases in the Supreme Court and in the Circuit Court of Appeals, contest and pending cases, and employee suits, is also given in the report.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for June, 1942

ON June 30th a total of 15,040 persons were receiving training under the Dominion-Provincial War Emergency Training Program, a slight increase in the total number reported in training on May 31st. There were 4,948 persons in pre-employment classes at the end of June as compared with 4,952 at the end of the preceding month. In the part-time industrial classes held in schools there was an enrolment of 1,581 as compared with 1,436 at the end of May. A total of 4,670 were receiving instruction in the R.C.A.F. classes, a slight reduction over the number in training May 31st. The number in Navy and Army Classes was 2,710 and 95 men were in rehabilitation classes for honourably discharged members of the armed forces.

During the month of June a total of 6,418 new trainees were enrolled in the schools, this total being made up as follows: pre-employment classes 3,120, part-time classes 900, R.C.A.F. classes 1,411, Navy and Army classes 922, and rehabilitation classes 65.

During the month of June 2,403 trainees were placed in employment while 1,422 enlisted. Of the number enlisted during the month 1,422 were from the R.C.A.F. pre-enlistment classes.

The number of women in training, although included in the totals given in Table No. 1, are also shown separately in Table No. 1A. During the month of June, 1,449 women commenced training in pre-employment industrial classes, and 1,109 were placed in employment, while 1,597 were still in training on June 30th.

Plant Schools

Since the Program adopted a policy of assisting, both technically and financially, the establishment of plant schools in war production plants, some thirty schools have been granted the Department's Certificate of Approval.

These schools, designed to train operators under full-time instructors on the actual machines and under the actual conditions found in the plant, have a single shift capacity for some 800 trainees or 2,400 trainees on a three shift basis. Since courses under the plan run from three to twelve weeks (present average 7·5 weeks) there is an average potential turnover in capacity of seven times per annum. This represents a total annual potential trainee output of some 16,800 trainees for the thirty schools so far established.

As the schools are only running at present an average of 1·6 shifts per school the annual trainee potential output is reduced to 8,960 trainees per annum. Average number of trainees per school is 46, the smallest school having 10 trainees enrolled, the largest 420.

Information concerning the operation of Plant Schools is provided in Bulletin No. 3 in the series of pamphlets on Training for War Industry published by the Department of Labour which may be obtained from the Supervisor of Training, Department of Labour Ottawa.

Job Instructor Training Program

Inaugurated late in May, Job Instructor Training has been widely accepted and is producing favourable comment from those who are conscientiously making it a part of their training set-up.

This programme is designed to increase the ability of supervisors in war plants to train the thousands of new workers who are being inducted into War Industries.

By sending a carefully selected representative to a Trainer's Institute for a period of a week, the company gets back a certified trainer capable of developing within the plant, among supervisors and key operators, a group of persons acquainted with better methods for training on the job and a uniform sure-fire method of transferring the knowledge and skill of the experienced hand to the new worker. Patience, care, and orderly procedure on the part of supervision, in dealing with a training problem, are the results to be expected from the introduction of Job Instructor Training to the shop personnel.

Trainer's Institutes, originally scheduled for Halifax, Montreal, Toronto, Hamilton, Winnipeg, and Vancouver, have been extended to include Quebec, Ottawa, Port Hope, Oshawa, London and Chatham.

Representatives from war plants, selected by their companies, to go to Trainer's Institutes, are assigned to same by the Regional Directors of the War Emergency Training Programme in the various provinces in which the companies are located.

Latest reports from the field show that there are now 138 Official War Production Trainers certificated for 92 companies from 108 of Canada's war production plants.

(1) Trainees in Part-time Classes consist mostly of employed persons who are being given training at the request of employers in war production who wish to up-grade their employees.
(2) Includes those graduates who, though actually placed prior to June 1, 1942, were not so reported until after June 1, 1942.

PRICE CONTROL IN CANADA DURING JUNE, 1942

Conservation, Simplification and Economies—Price Adjustments—Sugar Rationing—Enforcement Proceedings

AT the time the overall price-ceiling came into effect, official policy of the War-time Prices and Trade Board recognized that during the first few months, certain price adjustments would be required in order to ensure an uninterrupted flow of civilian supplies, but that a time would come when price adjustments would be no longer necessary, and that increasing reliance would have to be placed on direct controls over civilian supply and consumption. Price adjustments have been used to meet immediate situations such as individual price anomalies, seasonal variations, time-lag problems, and administrative problems involved in controlling individual sellers' prices for certain kinds of products. The more direct controls include consumer rationing, simplified practice and standardization of production, allocation of scarce materials and bulk purchasing by the government.

Conservation, Simplification and Economies

The problem of conservation and simplification is of a two-fold nature; on the one hand the aim is to divert scarce materials to essential uses, and on the other hand it is to reduce costs, and so permit the maintenance of the retail ceiling. The accomplishment of one aim in many cases assists in the accomplishment of the other.

Metal Products.—During the month, orders related to the conservation of metal covered a wide variety of articles. The authorized specifications of range boilers were given in A-169*; by them considerable savings are affected in steel sheet, zinc and other metals. Welding materials are saved by A-215 which required that steel tanks up to 1000 barrels capacity for use in the petroleum supply field be made of bolted rather than welded steel. Factory and railroad milk shipping cans were regulated by A-216 and A-217, manufacture being limited to the 5, 8, and 10 gallon and shot gun varieties. An increase of 10 per cent over the 1940 production was permitted however.

Certain types of barbed wire and steel clothesline wire were eliminated, and production limited to a percentage of production during 1937-1939. Tools such as shovels, spades, scoops, scrapers, axes and adzes also underwent simplification as did electrical supplies of diverse varieties, casters, and corset steel. The manufacture of lawn mowers after August 31, 1942, was absolutely prohibited.

Paper Products.—Several paper products were affected by conservation orders. The number of varieties of dress patterns in each price range was reduced by 1/3 of those sold or distributed during the basic period, (all patterns must conform of course to the various restrictions on clothing). (A-230.) Greeting cards to be sold at retail at more than 25c. each including envelope were prohibited, also seasonal wrappings (except for Easter and Christmas hollow toys), frills and the number of sizes of packages for chocolates and other sugar confections. Other orders stipulated the types of envelopes which might be manufactured in quantities of less than 250,000, the weight, width and length of roll of gummed kraft paper tape, and the weights, colours, finishes and grades of such sulphite converting papers as tissue, wax, bag, and wrapping papers.

Personal Effects.—Jewellery was one of the important items of personal effects touched by the simplification orders. A-210 prohibited manufacturers, wholesalers, importers and jewellers from selling without permission new or special models different from those sold before December 1, 1941. Exceptions to the order include trophies, class pins, and military emblems. A further order, A-267, eliminated the manufacture of all silver-plated hollowware without the permission of the Administrator.

A restrictive order on leather footwear, A-263, states that for each twelve month period succeeding June 26, 1942, each manufacturer shall restrict expenditures on lasts, dies, patterns, pattern makers, samples, pullovers, styling, etc., to 50 per cent of the amount so spent in the fiscal year prior to the date of the order. Footwear for the armed forces and for athletic and theatrical purposes is exempted.

Elastic material is further conserved by A-202 which restricts the amount of elastic webbing in a pair of braces to 18 inches, and A-279 which forbids the manufacture of girdles, pantie girdles and corsets having more than twenty-five inches of elastic binding and back or front lace garments having elastic web exceeding twelve inches in length and three inches in width.

Other orders limit the sizes, shapes and colours of buttons, colours of berets, patterns of rayon print goods, and fancy circular knitted hosiery.

(*) The letter "A" before a number indicates "Administrator's Order"; "B" indicates "Board Order".

Household and Office Effects.—Manufacture of novelty furniture is limited (by A-266) to 75 per cent of the designs made in 1941, and a priorities schedule for the sale, delivery and rental of new office machinery is established by A-195. Even mops, household brushes, twist-in-wire brushes, and wire brushes are subject to restrictions and simplifications in A-218 and A-219. The number of flexible electrical cord styles was reduced from thirty to nine (a considerable saving of rubber thus being effected), and the permitted widths and weights of electrical tapes stipulated (A-282 and A-232 respectively).

Used Goods.—The salvage of collapsible metal tubes was begun during June. B-139, (which came into effect on the first of the month) organized the collection of used tubes by authorized retail druggists for delivery to Wartime Salvage Limited. Smelters were prohibited from purchasing tubes after June 13th without the permission of Wartime Salvage Limited, payments for all purchases to be made to this company on its terms. The trade in used steel drums and used barrels was regulated by A-269, which appointed authorized dealers, and stipulated standard maximum prices for drums according to geographical areas.

A further order (A-236) governed the collection and disposition of used wine and distillers' bottles, and fixed the prices to be paid by dealers to peddlers and by producers to dealers.

An important order in the field of used goods covered the "registration of and control over used industrial and construction equipment". As a result of this ruling (A-246) an accurate census of all used, industrial, construction and road maintenance equipment in Canada will be completed. Further, if equipment is idle or engaged on non-essential work, the Administrator may require the owner to sell or rent the equipment to users for essential purposes.

Miscellaneous Conservation Orders.—The Division of Simplified Practice during June established a Dormant Stock Department, charged with the responsibility of preventing certain stocks (e.g. parts for goods no longer being demanded) from remaining dormant and serving no useful purpose. The new department "is to serve as a clearing house for such stagnant or surplus stocks".

A further order of considerable importance concerns deliveries by launderers, cleaners, and dyers (A-200.) By it operators having regular delivery routes will not be permitted more than three deliveries or pickups per week to any customer's premises, and these must be on alternate days. Hotels may secure calls twice a day, and commercial organizations once a day. Hospitals, railroads, and army camps, etc., are exempted. Conservation of materials is accomplished by the elimination of shipping boxes (except when common carrier is employed) hangers, studs, cuff fasteners, shirt boards and envelopes.

Finally, the authorized specifications for asbestos mill board, and asbestos paper are listed in A-209 together with the minimum quantities for the packaging of asbestos paper, valve stem packing and wick packing. The manufacture of 1/2 gallon and 1 gallon jugs or glass containers with capacity of more than 40 fluid ounces for bottling vinegar is prohibited by A-273.

These orders covering a wide variety of items, indicate the growing emphasis of the Board on the diversion of supplies to essential uses. It is an inevitable tendency in view of both increasing shortages, and the need for cost reductions.

Price Adjustments

Possibly the most difficult problem in this field during the month was that of maintaining beef supplies and controlling beef prices. B-134, which became effective on the first of June, divided Canada into fifteen zones and established uniform maximum prices which packers and wholesalers might charge in each zone. These maximum prices applied to first grade carcasses, sides and quarters of the two following classes of beef:

(1) beef from yearlings, steers, heifers and fed calves;

(2) cow and bull beef.

Retailers were allowed to fix their own prices for individual cuts but were restrained by the condition that aggregate prices for an entire carcass, side or quarter must not exceed laid-down cost plus transportation charges and the normal retail mark-up. The two problems of maintaining adequate supply in the face of export drainage to the United States, and seasonal price variations still remained, however. In regard to the former, the Wartime Food Corporation was established for the purpose of purchasing sufficient cattle from exporters (at United States prices) to maintain domestic supplies. B-151 provided for the formal licensing of all beef cattle exporters,* and made it compulsory for each to obtain permission from Wartime Food Corporation for each export shipment or to sell to the Company on its terms. The Corporation began operations in the market early in July.

*A licence for the export of dairy cattle is not required.

The problem of seasonal price variations was also met. The prices of beef usually rise from November to June (as a result of the increased cost of raising stall-fed cattle) thereafter falling again. The policy of the Board is to recognize seasonal variations and this policy was formally incorporated in B-149 which directed the wholesaler's maximum prices should be reduced one cent per point on July 13, August 5, August 24, and one-half cent on September 14.*

It is believed that these developments in the beef trade will serve to correct many of the difficulties which have been encountered since the ceiling came into effect.

"Squeeze Adjustments".—Squeeze adjustments are necessary in cases where ceiling prices do not reflect prior cost increases or do not cover continuing cost increases. One of these has already been discussed—the simplification orders, for in so far as the simplification results in cost reduction, it reduces the "squeeze". Another method is to regulate the maximum prices of wholesalers and manufacturers in a trade so as to "roll back the squeeze" (from the retail level) and share it out. Another method is by means of a subsidy paid by the Commodity Prices Stabilization Corporation. Still another method is that of bulk purchases of commodities by this same Corporation for resale at prices consistent with the retail ceiling.

B-148, concerning canned fruit and vegetables of the 1942 pack is a good example of a combination of the "roll-back" and the subsidy with a guaranteed market to the producer. As usual, the whole purpose of the order is to make adjustments within the industry which will maintain supply at prices within the retail ceiling.

In the first place, the order sets canners' maximum prices for tomatoes, tomato juice, peas, corn, green and wax beans, peaches, Bartlett pears, Kieffer pears, plums and apricots when sold in specified sizes. Wholesalers and retailers of these particular items are forbidden to sell at prices exceeding the maxima charged prior to January 1, 1942. In so far as prices are set for wholesalers and canners which do not cover all of the increased costs, there is a sharing of the "squeeze" throughout the trade.

Provision is made for the purchase by the Commodity Prices Stabilization Corporation at prescribed prices and under prescribed conditions of all stocks of peas, corn, green and waxed beans (packed in certain size containers) remaining unused in the hands of canners or wholesalers on February 1, 1943.

*A-246 (July 8, 1942) fixes maximum wholesalers' prices for individual cuts of beef to be effective from July 13 to August 2.

Provision for *bulk purchases* by the Commodity Prices Stabilization Corporation is made in the cases of tomatoes, peas, corn, green and wax beans, (packed in certain size containers) when costs of the vegetables to the canner exceed 1941 costs by stipulated amounts.

Further, the Commodity Prices Stabilization Corporation will pay *subsidies* on tomatoes, tomato juice, peas, corn, green and wax beans, peaches, Bartlett and Kieffer pears and plums where such are sold in particular sizes. Sales to the Corporation, for export, or to the Department of Munitions and Supply, are ineligible for the subsidy.

Regulation of other canned goods than those mentioned such as asparagus tips, lima beans, spinach, blueberries, and rhubarb is accomplished at the level of the canner, the wholesaler and the retailer. Canners' prices must not exceed those charged for similar products prior to October 12, 1941. Wholesalers' prices must not exceed canners' maximum prices plus transportation costs, plus a normal mark-up, if such does not exceed 10 per cent of the wholesaler's selling price. (After December 1, 1942 wholesalers may increase prices on fruit and vegetable products of the 1942 pack by half a cent per dozen per month until next year's pack is available for distribution). Retailers' maximum prices are set at the price paid to the wholesaler plus transportation costs and a normal mark-up if such does not exceed 25 per cent of retailer's selling price.

Three of the techniques of "squeeze" adjustment have been employed in this order then, subsidies, bulk purchases, and "squeeze sharing". As a result, the consumer will still be able to buy the main items of canned fruits and vegetables at the same prices he paid during the basic period, September 13, to October 11, 1941.

Other "squeeze" adjustments covered several articles; Jobbers' prices for feathers (A-204) importers and wholesalers' prices for oakum (A-251) processors' and assemblers' maximum prices for canned lobsters (A-223) and manufacturers' and wholesalers' prices for knitted underwear.

Several *clarification orders* were also passed, one regulating wholesale and retail prices of dehydrated alfalfa meal from the 1942 crop (A-221) and a group of orders governing maximum prices for fuel wood in many counties of Nova Scotia, New Brunswick, Quebec and Ontario. Only one case of *price anomaly* arose, that of brick ice cream sold by Maple Leaf Ice Cream Limited and Davie's Dairy Products Limited of Toronto. These prices were regulated in (A-203). *Extensions* of the ceiling were made to cover women's,

misses' and children's fur-trimmed cloth coats and fur-trimmed garments (A-265) and alterations and repairs on fur garments (A-234). These extensions were necessitated by the fact that raw fur is not subject to a price ceiling.

During the month a scheme was devised by the Coal Administrator and the chartered banks to facilitate the movement of coal from the mines and avoid prospective transportation difficulties. The plan is known as the *Solid Fuel Credit Plan* and by it the chartered banks will discount notes given by customers whom their dealer can recommend as satisfactory credit risks. The amount so advanced will not be less than $50 nor more than $250, ordinarily to be repaid in equal monthly instalments but in any event not later than May 15 next. Interest, payable by the consumer, will be the same as under the Home Improvement Plan, the basic rate being 6·20 per cent per annum.

The only new regulations in connection with *rentals* concerned the variation of maximum rentals for hotel accommodation (B-146). It was stated that applications would be considered in the cases of abnormally low rentals, or when improvements in services or premises had been accomplished.

Two problems covering *imports* arose, the first concerned imported rice; a standardization of brands, maximum prices for Canadian rice mills, and limitations upon the mark-ups by wholesalers and retailers were fixed by the Administrator of Flour and Cereal products. The second problem arose in connection with canned corned beef, most of which is imported into Canada from Argentina. Shortages resulted in an order (A-220) freezing stocks in the hands of distributors and retailers, until further notice.

Sugar Rationing

Plans were laid during June for the formal inauguration of *coupon rationing of sugar* on July 1. Coupon rationing was established at a time when sugar stocks in Canada were not particularly low. Shipping losses, however, had necessitated a reduction of the voluntary ration to half pound per person, per week, and in the interests of equitable distribution, coupon rationing became desirable. A further reason for the initiation of coupon rationing was the desire to obtain experience in the administration of such a scheme, in anticipation of a similar handling of other commodities. The experiment with formal rationing by coupon of this commodity will also serve to accustom consumers to this method of distribution.

Under the new system, all household consumers have been given coupon ration cards having five sugar coupons attached each representing a two weeks' ration (one pound) for one person. Industrial users, institutions, the armed forces, and the Department of Munitions and Supply must fill in purchase vouchers for every sugar purchase. Each industrial user and institution has been required to register before July first through his sugar supplier with the Wartime Prices and Trade Board. The registration form gives amongst other details his supplier's name, address (one supplier) and category (retailer, wholesaler, or refiner), and his own stocks and estimates of requirements having regard to Board Order No. 150, which, with certain exceptions, limits him during July, August, and September 1942, to 70 per cent of his consumption during the same three months of 1941.

The retailer cannot sell sugar unless he receives coupons or vouchers for the quantity sold. The wholesaler cannot sell to the retailer unless he receives from him coupons and/or purchase vouchers corresponding to the amount sold. The wholesaler cannot sell direct to industrial users or institutions unless they have registered through him and surrender to him purchase vouchers. In order to secure their supplies, wholesalers will surrender the coupons and vouchers to the Wartime Prices and Trade Board, and get a special certificate entitling them to buy sugar from a refiner.

Enforcement Proceedings

Enforcement proceedings of the Board have become more numerous as shown in a return tabled by Finance Minister Ilsley in the House on July 9. This summarizes the prosecutions for alleged offences against the regulations up to the fifteenth of June.

Prosecutions for Alleged Offences Against Regulations*

	Total	Rental Regulations	Price Ceiling	Rationing Hoarding	Other

* *Hansard*, July 9,1942, P. 4368.

In conclusion, mention should be made of the order-in-council (P.C. 5109, June 16, 1942) which combined the Maximum Prices Regulations and Wartime Prices and Trade Board Regulations in one document with resulting convenience both to the public and the Board. Certain sections have been changed or supplemented for the purpose of strengthening the enforcement provisions; other clarifying alterations have been made in respect to the powers and duties of the Board in general, and of the administrators and officials of the Board in particular.

FOOD CONTROL IN GREAT BRITAIN

Recent Survey by International Labour Office Indicates Successful Functioning of Organization for Food Distribution

FOOD control in Great Britain on the whole has been successful in accomplishing the ends for which it has been designed, according to an exhaustive study entitled "Food Control in Great Britain," published recently by the International Labour Office at its headquarters in Montreal.

The purpose of food control, the study points out, is "first to obtain an even and adequate flow of food into the channels of distribution and, secondly, to distribute these foods equitably to all individuals and to all classes in the community."

"The task is immense and the pitfalls many," the study says, "but on the whole British food control has been successful in accomplishing these ends. Mistakes have been made and more will be made, but mistakes as well as successes are not without their lesson for the future."

The study was prepared by Edith Tilton Denhardt of the economic and statistical section of the I.L.O. Much of the material of which Mrs. Denhardt makes use was obtained from first-hand investigation in Britain of the extensive apparatus that has been set up for the organization of the food supply and its distribution.

The study is part of the work that is now being done by the I.L.O. in fulfilment of a resolution of the 1941 Conference of the International Labour Organization which declared that "the close of the war must be followed by immediate action, previously planned and arranged, for the raising of standards of living throughout the world" and which affirmed the "desirability of associating the International Labour Organization with the planning and application of measures of reconstruction."

The author points out that Sir William Beveridge, in his discussion of British food control in the last war, came to the conclusion that it had little if any value for the years of peace. But the same thing cannot be said of food control today, the study finds. On the contrary, it says, "among the tangled and sometimes knotted threads of food control schemes and orders are some of a different colour from the rest, standing out in sharp relief. These threads will not be cut off with the end of the war, for they represent a social policy desirable both in peace and war."

The study shows that the British Government has gone beyond the mere acceptance of responsibility for the food supply of the country as a whole and has accepted a large measure of responsibility for the proper nutrition of every section of the people. Adequate nutrition depends on the foods available, on the consumers' ability to obtain them in adequate quantities, and on a sufficient knowledge of nutrition among consumers. The British Government has attacked on all three of these fronts, the author says, and "the ground gained on the last two fronts will set new peacetime frontiers."

"A nutrition program in peacetime must push these frontiers further. It should be concerned with influencing food production so that the most nutritionally valuable food will be abundant; it should be concerned with increasing the efficiency of production and distribution so that food will be cheap; it should be concerned with subsidizing or distributing free those foods which are most necessary in diet but which are beyond the reach of lower income groups; it should be concerned with school meals, school milk, factory canteens and other communal feeding centres; and it should be especially concerned with advancing the consumers' knowledge of nutrition and the proper methods of preparing foods."

The two outstanding wartime developments in this field in Great Britain, the study finds, are the free or cheap milk scheme and the communal feeding program. The milk scheme, under which children and nursing and pregnant mothers are supplied with cheap or free milk, has contributed greatly to increasing milk consumption. This plan, the study says, "is a definite recognition by the Government of its responsibility for the health of the children and, in addition, of an income level below

which their health is endangered because of inability to obtain milk—the birthright of all children." There seems to be little doubt that the scheme will remain as a permanent part of British social policy, the study concludes.

As for communal feeding, especially in the schools, the factories and in the mines, the study says "decent mid-day meal facilities have been provided that will not be scrapped after the war."

A similar and little-marked revolution has taken place in connection with the provision of milk and meals for children in school, the author points out.

The "indefensible definition" of a necessitous child as one who already shows symptoms of malnutrition has finally been superseded in England and Wales, she says, by a definition which refers to the ability to buy the required food. "This is a great and permanent advance; for it is unthinkable that the old definition will ever be re-established."

The author declares that during this war the British public has probably been bombarded with more sound nutritional information than in all the rest of its history to the extent that it has become "nutrition conscious." It is reasonable, she finds, to assume that the end of the war will not cause a relapse into unconsciousness.

Mrs. Denhardt points out, however, that the measures taken to improve the nutrition of the people are only one side of the Government's wartime food policy. Of equal importance is the responsibility that has been taken for the production and consumption of food and the consequent control established over the organization of the community's resources for this purpose.

"If post-war economic policy is to be characterized by a greater degree of government control over production and distribution of essential foods than existed in the past, many of the techniques of control evolved during the war, and especially the information and statistics collected, will be of great value. Indeed, without these basic data, no food policy in peace or in war can be fully effective."

The study is one of the I.L.O.'s continuing series of studies and reports on economic conditions. In its 272 pages are contained a thorough-going analysis of almost all aspects of the problems of production, distribution and consumption of food in Great Britain since the beginning of the war. There is a detailed examination of agricultural policy, rationing and priority distribution, and price control policy. The study also contains a number of valuable appendices and a detailed index.

MERCHANT SEAMEN'S MANNING POOLS AND WELFARE FACILITIES IN CANADA

THE International Labour Office has issued a pamphlet containing articles on "Organization of Seamen's Welfare in Canada", and "Continuity of Service". The first of these, which is based on information provided by the Director of Merchant Seamen of the Department of Transport, summarizes the work done in Canada in regard to merchant seamen's welfare during the war, and the second contains a section, "Continunity of Employment", describing manning pool schemes in various countries including Canada. These are the third and fourth in a series of articles on "The War and Merchant Seamen," the first two of which appeared in the May and June issues of the International Labour Review and were also published separately.

The War has necessitated careful organization of the supply of seamen and a great expansion of arrangements for their welfare while ashore. An informal Interdepartmental Committee was early established at the instance of the Minister of National Defence for Naval Services to consider the numerous questions relating to merchant seamen and to coordinate the activities of the various departments concerned. This committee was recently given formal status by an Order in Council of June 15, 1942 appearing elsewhere in this issue, p. .

Specific action was taken in an Order in Council of May 19, 1941 (LABOUR GAZETTE, 1941, p. 957) which was passed as a result of the recommendations of the Interdepartmental Committee. This order, which stated that "the provision of merchant seamen, their training, care and protection are essential to the proper conduct of the war", authorized the establishment of manning pools of merchant seamen, the provision of accommodation for seamen in these pools and the extension of existing and the establishment of new welfare facilities. It also provided for the expansion of training facilities. The program was placed under the supervision of a Director of Merchant Seamen who was appointed on June 5, 1941.

56615—4½

The manning pools were set up to prevent waste in the use of seamen by regularizing the system of employment, and their existence also simplifies the welfare problem, especially in regard to the provision of food and lodging. The Canadian system works in close co-operation with the British Merchant Navy Reserve Pool which was established under the Essential Work (Merchant Navy) Order of May 1, 1941. Soon after the passage of the Canadian Order in Council of May 19, a manning pool was established at Halifax. A British pool was also set up at Montreal. Towards the end of 1941 the number of British merchant seamen arriving in Canada increased sharply and since this increase was expected to be permanent, additional steps had to be taken. At the request of the British Government the Dominion took over the general responsibility for the manning scheme under authority of an Order in Council of November 22, 1941. This order authorized the enlargement of the United Kingdom manning pool at Montreal and its conversion into a Canadian Government pool, the establishment of a new pool at Vancouver and the expansion of the Halifax pool. These three pools are now fully operating; the Canadian Government bears the cost of the buildings, while the British Government is charged, with regard to its own seamen, for the cost of operation and services. The seamen in them receive board, lodging and reserve pay while awaiting assignment to ships.

It is also anticipated that other Allied governments may establish manning pools since many of their seamen are now commonly in Canada. An Order in Council, appearing elsewhere in this issue, was therefore passed on June 15, 1942, to place such pools under the general supervision of the Director of Merchant Seamen and to provide that they should be governed in the main in accordance with the principles regulating the Canadian pools.

On the welfare side, merchant seamen's clubs and homes have been opened in Halifax, Sydney, Louisburg, St. John and Montreal and an additional one is to be opened at Three Rivers. The largest of these is the Allied Merchant Seamen's Club at Halifax, which has 500 beds, a spacious lounge and reading room, a canteen for the sale of beer and a cafeteria serving from 1,500 to 2,000 meals per day. It is intended to open a Merchant Navy Officers' Club in Halifax as soon as suitable premises can be secured, and a separate club for officers has already been opened in Montreal.

Welfare in other respects is also being provided for. Sports and other entertainment facilities are being systematically developed and the Director of Merchant Seamen has arranged with the Educational Service of the Canadian Legion War Services for educational courses. Clothes, tobacco, chocolate, writing pads and other comforts are distributed by the Navy League of Canada and other voluntary organizations. Free medical service is also provided under Part V of the Canada Shipping Act, 1934, and a special hospital ship service has been instituted for vessels lying at anchor awaiting convoy.

In this welfare work the Director of Merchant Seamen has co-operated closely with voluntary organizations, principally the Navy League of Canada. It is the Navy League which operates the seamen's clubs mentioned above and for this purpose it receives a grant from the Dominion Government. In addition there are in Montreal and Saint John old-established sailors' institutes, both Protestant and Catholic, which provide a certain amount of accommodation for board, lodging and entertainment. Other organizations provide comforts.

Control of Employment of Women in Great Britain

The British *Ministry of Labour Gazette* reports that the Minister of Labour and National Service has made an Order amending in certain respects the Employment of Women (Control of Engagement) Order, 1942, which prohibited women in the age-groups 20-30 inclusive, subject to exceptions as regards certain categories of women and specified employments, from obtaining employment otherwise than through a local office of the Ministry of Labour and National Service or an employment agency approved by the Minister. Similarly, employers were prohibited from engaging or seeking to engage women covered by the Order, except through a local office or an approved employment agency.

The principal amendment effected by the new Order, which was made on 28th April and became operative on 4th May, 1942, extends the scope of the Order to include women aged 18 and 19 years of age. Other amendments provide for certain additional categories of employment to be excluded from the scope of the Order, viz., (*a*) the employment in a professional capacity of any person whose name is on the medical register, (*b*) the employment as a dentist of any person registered under the Dentists Act, 1878, as amended by the Dentists Act, 1921, and (*c*) employment as a member of a Police Force within the meaning of the Police Pension Act, 1921.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Merchant Seamen—Pilots and Masters—Longshoremen—Construction Projects at Victoria—Minimum Wages in Alberta, Manitoba, Quebec and British Columbia—Hours in British Columbia—Licensing Drivers in New Brunswick—Pensions in British Columbia and Saskatchewan—Workmen's Compensation, Cost of Living Bonus and Cinema Projectionists in Saskatchewan.

EXTENSIVE welfare and training facilities have been set up for merchant seamen, and temporary Masters' and Pilots' Certificates are to be issued. An order authorizing the issue of work permits for longshoremen has been passed and the one for Halifax longshoremen amended. Employers are required to take precautions against fires on their premises caused by enemy action. Wage and cost-of-living bonus adjustments have been made for workers on government construction works at Victoria.

Alberta has set minimum rates for female workers in greenhouses and canneries. British Columbia has issued its usual summer season order relating to hours for women employed in resort hotels and has renewed the exemption from the Hours of Work Act granted to the fruit and vegetable industry. It has also adopted the new amendments in the Dominion Old Age Pensions regulations. Motor-vehicle shops in Nanaimo and the surrounding territory have been exempted from the Weekly Half-Holiday Act but must observe a half-holiday on Saturdays. Manitoba has issued a new minimum wage order applying to hotels and restaurants. Four minimum wage orders have been renewed in Quebec and a new order for the match industry has been passed. In New Brunswick drivers' licences are to be granted to boys of 16 and 17 years to meet the shortage of motor-vehicle operators. Saskatchewan has granted a cost-of-living bonus to government employees and no longer requires two licensed projectionists to be on duty in moving-picture houses where more than one machine is in use. It has also extended the coverage of its Workmen's Compensation Act to test flying and has issued a regulation under its 1942 Teachers' Superannuation Act.

Dominion

Merchant Seamen

At the instance of the Minister of National Defence for Naval Services an informal Interdepartmental Committee was established to co-ordinate the activities of the several departments concerned with merchant seamen. In P.C. 4970, June 15, 1942, the functions and composition of this Committee were formally set out. It is "to study such questions concerning the control and discipline of merchant seamen ashore in Canada and on board ship, and other related matters as may from time to time be referred to it." The Committee consists of the Director of Merchant Seamen's Branch and the Supervisor of Nautical Services' Division, Department of Transport; the Director of Trade Division, Department of National Defence, Naval Services; officials from the Immigration Branch of Mines and Resources and the Judge Advocate General's Branch of National Defence; representatives of the Departments of Justice, External Affairs and Pensions and National Health; and a Royal Canadian Mounted Police officer. It has power to appoint sub-committees.

By P.C. 14/3550, May 19, 1941 (LABOUR GAZETTE, 1941, p. 957) authority was given to establish merchant seamen's manning pools and to extend welfare and training facilities. On the recommendation of the Interdepartmental Committee the terms of this Order in Council were extended with regard to training facilities and manning pools by two Orders in Council dated November 22, 1941.

The first of these, P.C. 148/9130, authorized the following training program drawn up by the Director of Merchant Seamen; the establishment of Training Centres, the first one being established in Nova Scotia, for training men without experience as Ordinary Seamen; the establishment of a Marine Engineering School at Kingston where men may qualify as firemen, stokers and trimmers; the extension of the facilities of this School to enable seamen with engine room experience to acquire certificates from Fourth Engineer to Chief Engineer; the extension of existing Navigation Schools to enable men with sea experience to qualify for Second Mate's and higher certificates; and arrangements for the training of cooks. These facilities are also available to men in ships of United Kingdom registry.

The second, P.C. 149/9130, provided that the system of manning pools be expanded to meet the large and permanent increase in the

number of seamen recruited in Britain who were arriving in Canada, and that the entire scheme be placed under the supervision of the Canadian Government.

P.C. 4924, the Manning Pools (Alien Merchant Seamen) Order, 1942, passed on June 15, authorized Allied Governments to establish manning pools for alien seamen in Canada. The Director of any such pool may exercise with regard to the seamen in it such powers as are conferred on him by the laws of the Power setting up the pool, but this clause does not affect the jurisdiction of any Canadian Court. The Canadian Director of Merchant Seamen will exercise general supervision and control over the foreign pools in regard to welfare and training facilities. The Merchant Seamen Order, 1941, as amended (LABOUR GAZETTE, 1941, p. 650; March, 1942, p. 307), which relates to the discipline of merchant seamen, applies to the foreign manning pools.

Under P.C. 104/3546, April 30, 1942 (LABOUR GAZETTE, June, 1942, p. 691) pensions are paid to Canadian merchant seamen and salt-water fishermen who suffer disability as a result of enemy action. This Order in Council is supplemented by P.C. 80/4430, May 27, which extends to them the provisions of the Post-Discharge Re-establishment Order (LABOUR GAZETTE, 1941, p. 1235). The latter provides for the payment of grants to persons discharged from the armed forces to permit them to pursue vocational, technical or other training which the Minister of Pensions and National Health approves as likely to fit them for employment or re-employment.

Temporary Certificates for Pilots and Masters

The shortage of Masters and pilots to handle the wartime increase of traffic is to be met by the issuing of temporary certificates.

P.C. 2892 of April 14 empowers the Minister of Transport to grant temporary Master's certificates for the harbour communication service. They will be valid for periods not exceeding one year within the harbours and adjacent waters designated in the certificate and approved by the Naval Authorities. Applicants must be approved by the Naval Authorities or the Royal Canadian Mounted Police and must be qualified to operate a motor-boat not exceeding forty tons and certificated to carry not more than 35 passengers. A licence fee of $5 is required.

P.C. 4429 gazetted June 6 provides for temporary certificates for pilots at Halifax. The qualifications are similar to those for pilots stipulated in the by-laws of the Halifax Pilotage District except that the upper age limit has been raised from 50 to 55 years and a minimum of two years' experience as First Mate of a Foreign Going Ship is substituted for experience as a Master.

Construction Projects

P.C. 5037, June 12, 1942, sets maximum hourly rates and provides a cost-of-living bonus for workers on Government construction projects in Victoria and its environs or in any other part of Vancouver Island designated by the National War Labour Board. The order is designed to bring rates on Dominion Government work into line with those current in the area. A maximum of 50 cents an hour and a cost of living bonus of $3.65 for a standard work-week are decreed for labourers, and the National War Labour Board is empowered to make proportionate adjustments in wages and bonuses for other classes of workers on the same projects. An employee who works less than a standard work-week will receive a bonus proportionate to the number of hours worked but no additional bonus will be granted for overtime. The Board may adjust the bonus from time to time.

Defence of Canada Regulations

P.C. 4933, June 10, 1942, amends the Defence of Canada regulations to empower the Minister of Pensions and National Health to compel owners, lessees or occupiers of any premises to take the necessary steps to prevent and minimize the spread of fires due to enemy action. In particular, employers may be required to organize and train their employees in fire-fighting and to maintain fire watchmen and spotters on their premises.

Longshoremen

P.C. 4270, May 21, 1942, amends P.C. 3511 (LABOUR GAZETTE, May, 1942, p. 556) concerning ship loading and unloading at Halifax. The amendment moves ahead the effective date of the former order from May 1 to May 18 and alters the clause relating to existing agreements. Formerly the Controller of Loading Operations was not to be restricted by any agreement between the shipping and stevedoring companies at Halifax and the Longshoremen's Association except insofar as they concerned wage rates. Now all other parts of existing agreements which are not inconsistent with P.C. 3511 are to remain in force.

P.C. 6004, July 13, 1942, published elsewhere in this issue, p. 757, empowers the Minister of Labour to prescribe a system of work permits for persons loading and unloading ships at any port.

Provincial

Alberta Minimum Wage Act

Order 12, gazetted and effective June 30, fixes a minimum rate of $12.50 a week for female workers employed in greenhouses. Time and one-half must be paid for all hours in excess of 9 a day and 48 a week. Part-time workers are to receive not less than 30 cents an hour and must be paid for at least four hours on any day they work. For apprentices and learners the weekly minimum is to be $8 for the first month and $10 for the second month. Thereafter they are to be paid at the regular rate. Not more than 25 per cent of the staff may be learners unless the staff numbers less than four, in which case one learner may be employed.

Order 14, gazetted and effective June 30, prescribes minimum rates for female workers in canneries which process meat, fish, fruit or vegetables. Experienced workers must be paid a minimum of 32 cents an hour, and inexperienced women are to receive 25 cents an hour for the first two weeks and the regular rate thereafter. Workers with one month's experience in the industry must be paid the rate for experienced employees. A special minimum of 35 cents an hour is set for corn huskers or corn cutters irrespective of experience. These rates apply to part-time workers also, but if they are employed for less than four hours in any one day they must be paid at least 32 cents an hour for four hours. As in Order 12, above, time and one-half is to be paid for all hours in excess of 9 a day and 48 a week, and not more than 25 per cent of the staff may be apprentices or learners. If the staff numbers less than four, one apprentice may be employed.

British Columbia Female Minimum Wage Act

The usual summer season Order varying the maximum hours provisions of Order 52 (LABOUR GAZETTE 1938, p. 291) for resort hotels in unorganized territory was gazetted June 11. It is identical with the one issued for the summer of 1941 (LABOUR GAZETTE, 1941, p. 651). The Order is effective between June 15 and September 12 and does not apply to a long list of cities, districts and villages appended to it.

British Columbia Hours of Work Act

The regulation first passed in 1935 exempting the fruit and vegetable industry from the eight-hour day and 48-hour week fixed by this Act (LABOUR GAZETTE, 1935, p. 428) has again been renewed to March 31, 1943. The regulation covers the canning, preserving, drying, packing or otherwise adapting for sale or use of any kind of fruit or vegetable.

British Columbia Old Age Pensions Act

By two orders gazetted June 25, British Columbia, which pays old age pensions in accordance with Dominion regulations, has adopted the two recent amendments in the Dominion Old Age Pensions regulations providing that cost-of-living bonuses or supplemental allowances from the British Columbia or Alberta Governments or assigned pay from a member of the services in cases where no dependent's allowance is paid shall not be counted in computing a pensioner's income. Alberta has already taken this step and Saskatchewan adopted the amendment relating to assigned pay. (LABOUR GAZETTE, May, 1942, p. 583).

British Columbia Weekly Half-Holiday Act

The exemption from the weekly half-holiday provisions of this Act which had already been granted to motor-vehicle shops in Vancouver, Victoria and suburbs, and New Westminster (LABOUR GAZETTE, 1941, p. 1269; April, 1942, p. 447) has been extended to the city of Nanaimo and the unorganized territory within a 10-mile radius of it. The exempting Order, gazetted June 11, decrees that shops engaged in repairing motor-vehicles, those which sell motor-car parts at wholesale and those which sell new motor-vehicles must observe a half holiday on Saturdays between 12 noon and midnight. Employees must leave the premises by 1 p.m. on that day but one or more may be retained to perform necessary services and repairs to motor-vehicles.

Automobile service stations are governed by a 1931 order, (LABOUR GAZETTE, 1931, p. 1285) exempting them from the provisions of the Act. As was done in the case of Vancouver (LABOUR GAZETTE, 1941, p. 1269) this order is now amended by a regulation gazetted June 11 declaring that the term "automobile service stations" within the city of Nanaimo shall not include the types of motor-vehicle shops mentioned in the above paragraph.

Manitoba Minimum Wage Act

A new Order 5 governing hotels, restaurants, clubs, victualling houses and refreshment stands in Manitoba was gazetted June 13 and is to be effective from that date. It replaces Order 5 first issued in October, 1935 (LABOUR GAZETTE, 1935, p. 1011) and later extended in January, 1936, to "all portions of the prov-

ince of Manitoba although not included within any city" (LABOUR GAZETTE, 1936, p. 239).

The new order fixes different rates for different areas. The rates, somewhat higher than in the previous Order, have been approved by the Manitoba Regional War Labour Board. Hours and other conditions of work remain the same except for new overtime provisions. Permits granting modifications of or exemptions from any provision of the Order may be issued by the Minister of Labour on application but only to meet emergencies or seasonal needs.

The Order specifies that employers in the Greater Winnipeg Water District, Brandon, Portage la Prairie, Dauphin, Neepawa, Souris, Carberry, Virden, Flin Flon and in any summer resort from June to September inclusive must pay a minimum wage of $13 instead of the old minimum of $12 to experienced employees for a 48-hour week. Inexperienced workers are to be paid $11 a week for the first month of employment, $12 for the second month and $13 a week thereafter. A special rate of $10 a week is set for bell-boys irrespective of experience. Employers in any other part of Manitoba must pay wages not more than $2 a week less than these rates.

Hours of work in the specified areas may not exceed 10 a day and 48 a week. A full day's rest is to be allowed each week and a half-hour interval for each meal. The working period for any woman employee may not end between 1 a.m. and 6 a.m. For overtime a worker must be paid at least five cents per hour more than the regular rate. Overtime is limited to three hours a day, six hours a week, and 36 times a year. To work overtime within the Greater Winnipeg Water District a permit from the Minister of Labour must be obtained.

In the rest of the province outside the specified areas the weekly hours of work may not exceed 52 and one full day's rest a week must be permitted.

There have been some variations in the provisions relating to deductions for board and lodging. As before, an employer may deduct a maximum of $2.50 a week if he furnishes lodging and $4 if he supplies 21 meals. New provisions stipulate that deductions for fewer meals must be computed on the basis of 20 cents a meal. Such deductions can only be made if the employee actually partakes of the meals and utilizes the accommodation. The Minister of Labour may give notice limiting or prohibiting such deductions if he is satisfied that the meals or lodging are inadequate or that the worker is being overcharged.

As in the previous Order the employment of children under 16 is forbidden. There is no change in the provisions relating to time records, methods of payment, giving notice before dismissal, and the supplying and laundering of uniforms. The clauses prescribing conditions of work also remain as before. They cover cleanliness, sanitation, ventilation, temperature, toilet facilities, the guarding of machinery and first aid.

New Brunswick Motor Vehicle Act

By an Order issued June 24 and gazetted July 2 the Minister of Public Works recommended that the Motor Vehicle Act be amended, retroactive to the date of the order, to authorize him to issue licences during the war to male persons between the ages of 16 and 18 to enable them to drive delivery trucks or perform light work involving the operation of motor-vehicles. Under the Act the Minister only has power to issue special licences to qualified persons between 16 and 18 years to operate motor-vehicles owned by their parents or guardians, if the latter have given their consent and agreed to assume full responsibility for the operation of the motor-vehicle.

The Minister recommended that the new special licences for boys of 16 and 17 be granted only on the application of the employer and after the consent of the parent or guardian had been obtained. Licences will not be issued for motor-vehicles exceeding 10,000 lbs. gross weight and will be limited in validity to a radius of 35 miles of a designated place and to the motor-vehicles of the employer which will also be specified in the licence. Employers must furnish the Minister with proof of financial responsibility and may be required to enter into an undertaking with respect to damages. The special licences will expire on March 31 of each year and three months after the end of the war.

Quebec Minimum Wage Act

A new Order 13 applying to the match industry was gazetted June 13 and replaces the 1938 Order (LABOUR GAZETTE, 1938, p. 1099). It declares that general Order 4

(LABOUR GAZETTE, May, 1942, p. 586) governs the industry in all but two respects. The minimum rate applies to a work-week of 60 hours for men and 55 for women and all establishments manufacturing matches are to be classed in Zone II irrespective of their location.

Renewals of four orders were gazetted June 6. Order 9 governing teachers employed by the Catholic School Board of Verdun (LABOUR GAZETTE, 1938, p. 626), and Order 40 relating to theatres and moving-picture houses on the island of Montreal (LABOUR GAZETTE, 1941, p. 653), are to remain in force until July 1, 1943. Order 17 concerning laundries and related establishments in the Montreal District (LABOUR GAZETTE, 1938, p. 1351) and Order 19 governing the manufacture of full-fashioned hosiery (LABOUR GAZETTE, 1938, p. 1352) are extended to June 15, 1943.

Saskatchewan Cost-of-Living Bonus for Government Employees

Saskatchewan, by two orders gazetted June 15, has authorized the payment of cost-of-living bonuses for 1942 to employees in the Public Service and the Department of Telephones. Full-time employees whose salary with the bonus added is not more than $2,100 are eligible for bonus payments. Single persons are to receive $5 a month and married male employees, widows, widowers and married female employees with dependent children under 18 will receive $10 monthly. The bonuses are to be paid on June 30 and December 31 for the preceding six months of continuous employment. Proportionate payments will be made to those who are superannuated, enlist or die before the six months is completed. In the case of death, payment is to be made to the next-of-kin or to the estate as the Deputy Minister of Telephones or the Provincial Treasurer may decide.

Saskatchewan Teachers' Superannuation Act

A regulation gazetted June 30 clarifies the section in the new Teachers' Superannuation Act of April 11, 1942, which provides for a sliding scale of deductions in superannuation allowances being paid under the former Act at April 1. The deductions are to be made from the net pension which is defined as the actual amount of the pension computed under the old Act less any deductions provided for by that Act. Where a pensioner has availed himself of the alternative scheme by which he may commute his superannuation allowance into a reduced allowance and a pension for his dependent after his death, the deductions are to be made from the net pension and the sum remaining shall then be commuted into the alternative scheme of payments.

Saskatchewan Theatres and Cinematographs Act

The regulation requiring two licensed operators to be on duty in motion-picture houses where more than one machine is in use (LABOUR GAZETTE, 1931, p. 658) has been relaxed by an order gazetted June 15 and effective from July 1. Alberta took a similar step recently (LABOUR GAZETTE, June, 1942, p. 691).

The amending regulation declares that one operator with qualifications corresponding to the classification of the equipment used is now deemed sufficient irrespective of the number of machines in use. Theatres in cities are forbidden to take advantage of the new regulation to reduce their operating personnel immediately but are not required to fill vacancies occurring in the future. All such vacancies must be promptly reported to the Chief Inspector of Theatres and Cinematographs by the proprietor.

Saskatchewan Workmen's Compensation Act

As the result of an application to the Workmen's Compensation Board, the provisions of the Act have been extended to include test flying by an order gazetted June 15 and effective from July 1, 1942. Operations connected with aeroplanes and hydroplanes exclusive of flying were already covered (LABOUR GAZETTE, 1941, p. 139). Commercial flying is still expressly excluded although Trans-Canada Airlines and five air transport companies controlled by the Canadian Pacific Railway Company were brought within the scope of the collective liability system in April (LABOUR GAZETTE, May, 1942, p. 588). The present order makes one slight variation effective from April 1, 1942, in the earlier order by substituting "Canadian Pacific Air Lines Ltd." for "Prairie Airways Ltd." in the list of air transport companies included.

LABOUR AND INDUSTRY IN MANITOBA, NOVA SCOTIA AND SASKATCHEWAN

Annual Reports of Provincial Departments of Labour

THE following article reviews the activities of the Departments of Labour in Manitoba, Nova Scotia, and Saskatchewan, as detailed in their annual reports for the preceding fiscal year.

Manitoba

The annual report of the Department of Labour of Manitoba, for the fiscal year ending April 30, 1941, gives details concerning the administration of various Acts coming within the jurisdiction of the department.

Inspections.—During the fiscal period May 1, 1940 to April 30, 1941, the Manitoba Department of Labour made 19,258 inspections under Acts administered by the Department and 6,877 orders were issued. In Winnipeg and District 1,507 inspections were made under the Manitoba Factories Act which resulted in 965 orders for the improvement of safety conditions and 28 for the improvement of health and sanitation. In areas outside of Winnipeg and District, 216 inspections were made under the same Act and these resulted in 117 orders for the improvement of safety conditions and 11 for health and sanitation.

Minimum Wages.—Eight charges were laid by the Department under the terms of the Minimum Wage Act during the fiscal year. On behalf of female employees, $2,092.53 in wages due was collected by the Department in the adjusting of 236 cases. On behalf of male employees, $2,429.36 was collected in wages due in adjusting 112 cases.

There were 2,538 day inspections and 7 night inspections made throughout the province under regulations established under the Minimum Wage Act. Of orders issued as a result of these inspections, 45 dealt with working conditions; 374 with hours; 256 with wages and 84 with other regulations.

Overtime Permits.—A noticeable increase in the number of overtime permits issued during the fiscal year is recorded in the report. This increase was particularly due to war contracts issued to dry cleaning, laundry and garment industries. The Minimum Wage Board, in an effort to reduce overtime to a minimum, and to spread the work amongst as many employees as possible, endorsed the policy of working double shifts. In all there were 203 overtime permits issued during the year and 6 for legal holidays.

Steam Boilers and Pressure Vessels.—During the year there were 4,593 inspections under the Steam Boiler and Pressure Vessels Act. As a result of these inspections, repairs were ordered in 1,732 cases.

Strikes and Lockouts Prevention Act.—During the year, the report states that many employers and employees availed themselves of the services of the Conciliation Branch and serious disturbances were avoided by this procedure. Six (6) applications for the establishment of a board of conciliation were filed with the Registrar of the Strikes and Lockouts Prevention Act.

Accidents and Accident Prevention.—In the period between January 1 to December 31, 1940, there were 1,074 industrial accidents reported to the Department. In 28 of these cases the injuries resulted in death. In the previous year, 1939, there were 910 accidents, 19 of which resulted in fatalities. Falls, falling objects and drownings, were the most frequent causes of industrial accidents.

Nova Scotia

The annual report of the Nova Scotia Department of Labour for the fiscal year ending November 30, 1941, states that during the year "every effort has been made to impress upon contractors and others engaging in new business, whether of a war nature or otherwise, the importance of reaching an agreement upon wage and working conditions before actual operations are begun. . . A planned wage and classification range and prior settlement of working arrangements is most important".

Joint Adjustment Board.—The report refers to the establishment during the year of a Joint Adjustment Board "to consider, examine or deal with all disputes or grievances in the coal mines of the province which dispute or disputes did not involve rates of pay, working conditions or other matters being the subject of agreement between the operators and the union". The Board was called upon to adjudicate in many cases throughout the year and the report states that "already a great deal of good has been accomplished".

Employment Service.—In view of the taking over on August 1, 1941, of the Employment Service of Canada by the Unemployment Insurance Commission, statistics of applications, placements and vacancies are given in the report for eight months only. In the fiscal period, December 1, 1940 to July 31, 1941, a total of 20,829 placements were made by the Employment Service of Canada. Vacancies reported to the Service numbered

21,401; applications, 22,320; while of the placements 9,334 were in regular and 11,495 in casual work.

Factories Inspection and Industrial Accidents.—There were 309 inspections and re-inspections made by the Factories Inspector during the fiscal year. The number of accidents reported or ascertained from claims made to the Workmen's Compensation Board was 831, eleven of which were reports of fatal accidents.

Commenting on the incidents of industrial accidents, the Factory Inspector states: "The presence of large numbers of inexperienced workers in industry, most of whom are enthusiastic and eager to make good, implies a potential accident hazard which is very difficult to offset, for such worker will be clumsy and incautious at many of the beginners' occupations, and therefore more likely to be injured. When this class of worker is employed at machines under proper supervision, the danger of injury is much reduced, as the dangerous parts of the new machine-tools are very thoroughly guarded. On the other hand, a difficulty of securing new machines has brought into operation old discarded machine-tools which tax the ingenuity of even experienced mechanics to adjust and operate".

One employer was prosecuted under the Factories Act and fined $50 and costs for employing a child under 14 years of age.

Industrial Standards Act.—Dealing with the administration of the Industrial Standards Act, the Factory Inspector's report declares: "All the trades under the Act had a very busy year, and practically all of the hundreds of mechanics who came to the districts where the law is in operation became members of the trade union organization. Union men are not likely to violate working arrangements, and therefore the large increase in the number of mechanics did not bring a corresponding increase in violations. Then again, the demand for workers being great, there was not the competition for jobs that might have led to disregard of the scheduled requirements".

One employer, a building contractor, was prosecuted under the Act for employing a carpenter at wages lower than the scheduled rate. The magistrate ruled that the man was not a carpenter and dismissed the case. An appeal was taken before a County Court Judge who upheld the decision of the Magistrate. Commenting on this, the report states: "The decision might have had serious repercussions, as the organized carpenters are not likely to work with other men employed at carpenter work, unless such men receive the scheduled rate of pay. There are hundreds of men employed by building contractors who are in the class which the Court decided were not carpenters. Fortunately the contractors took no advantage of the Court's decision, and continued to pay the regular rate to all men employed at carpenter work".

Minimum Wages.—The report of the Minimum Wage Board states that wage sheets collected show that in almost all of the industries, especially the textile trades, there was an increase in wage earnings during the fiscal year, but in some instances there was a concurrent increase in the weekly hours worked. This later condition was chiefly attributed to the issuing of war contracts which have to be filled quickly.

During the year the Board interviewed a large number of employers and employees, and all complaints received were investigated and adjustments in wages and hours made.

The report contains tabular statistics for a number of industrial groups: firms reporting; the number of women workers; total wages paid per week; average weekly wages and hours; and the numbers in each wage classification.

Fishermen's Loan Board.—During the period December 1, 1940 to June 4, 1941, no loans were made to fishermen. On the later date, an Order in Council was passed by the Government of Nova Scotia, authorizing the Provincial Fishermen's Loan Board to use the Fund, which was created by repayments of loans to needy fishermen and which amounted to $67,058.25 on December 1, 1940, for the purpose of issuing two types of loans, namely (1) boat building loans to individuals, and (2) loans to organized groups of needy fishermen to be used for purposes incidental to the catching, curing and marketing of fish and fish products.

In the period June 4, 1941, to November 30, 1941, twenty-seven boat loans were approved by the Board amounting to $11,135.00. At November 30, 1941, fifteen of these boats had been completed at a total cost of $6,005.00 of which $4,730.00 was paid out of the Fund as at November 30, 1941, the remainder, $1,275.00, being paid out of the Fund on or after December 1, 1941. Six organization loans were also granted, amounting to $10,500.00 making a total expenditure of $15,230.00 chargeable against the Fund and leaving a balance of $51,828.25.

Saskatchewan

Covering the year ending December 31, 1941, the seventh report since the present Bureau of Labour and Public Welfare of Saskatchewan was formed in 1934 also constitutes the twenty-first report since the

original Bureau of Labour and Industry was organized in 1920.

Strikes and Lockouts.—Continuing the record established in 1940 there were no industrial disputes in Saskatchewan during the calendar year 1941.

One Day's Rest in Seven Act.—Three charges were laid against three firms under the One Day's Rest in Seven Act, fines being imposed in all three cases. One case on which conviction was obtained in Police Court was appealed but the appeal was lost. In addition, the report states, it was found necessary to issue numerous warnings in connection with the application of the Act which applies to the cities of the province and provides for 24 consecutive hours of rest in every seven days with certain exceptions.

Freedom of Trade Union Association Act.—As required under the Freedom of Trade Union Association Act, 128 associations filed a copy of their constitution and bylaws with the Minister of Labour, as well as lists of names and addresses of their officers and the number of their members. The 128 organizations filing returns reported a membership of 8,873 compared with 130 organizations with 8,193 members in 1939.

Minimum Wages.—During the period January 1, 1941, to December 31, 1941, a total of 3,111 inspections were made. Of these, 2,915 were general inspections and 196 special inspections. The Board also sent wage returns forms to 3,908 firms. Of 3,024 wage sheet returns from firms having employees, 2,555 were analysed while 469 showed incomplete information and were still pending amendment.

From the analysis made of these returns it was found that 330 employees were receiving less than the minimum rate to which they were entitled compared with 647 in the preceding year 1940. It was found that 127 employees were not receiving proper pay for overtime; 51 were serving as apprentices in industry without the approval of the Minimum Wage Board.

The total number of employees reported on the wage sheet returns was 22,319, consisting of 16,141 males and 6,178 females who together received $54,894.27 in overtime pay for time worked in excess of 48 hours in any week, during the four week or one month pay period in 1941. In 1940 there were 19,076 employees who together received $50,086.00 in overtime pay for time worked in excess of 48 hours in any week during the four week or one month pay period reported.

During the calendar year 1941, arrears of wages to the amount of $10,498.92 were collected from 309 firms and were apportioned amongst 257 males and 237 females, a total of 494 employees. It was also necessary during the year to institute court proceedings in order to enforce the minimum Wage Act and Orders of the Board. Fourteen charges were laid against eight firms; convictions were obtained and fines imposed on ten charges, three were dismissed while one was withdrawn. As part of the penalties, $375.36 in wages was ordered by the Court.

Apprenticeship Agreements.—At December 31, 1941, there were 89 apprentices indentured to 65 firms covering 20 trades or industries. Pharmacy was the trade of the largest number of apprentices, 31 being indentured in that group. This was followed by "druggist" with 11.

Industrial Standards Act.—According to the report, in the period January 1 to December 31, 1941, a total of 609 employers and 1,485 employees were governed by agreements drawn up under the terms of the Industrial Standards Act. At the end of the year there were 40 schedules in effect under the legislation, 13 schedules being in the barbering trade and 7 in beauty culture. There were 38 schedules under the Act in the year ending December 31, 1940.

During 1941, nine firms and four individuals were prosecuted. Twelve charges in all were laid for failure to comply with the terms of the Act, convictions and fines imposed in four cases, five cases were dismissed and 3 were withdrawn. Back wages collected in the period January 1 to December 31, 1941, amounted to $2,830.55 to the benefit of 103 employees.

Dominion-Provincial Wage Inspections.—As explained in the report "there has been a great increase in the amount of Construction and Supply Contracts issued by the various Departments of the Dominion Government. The Dominion Department of Labour found it impossible to adequately check the wages required to be paid under each contract. In May, 1941, the Ministers in charge of the Labour Departments of the Provinces held a conference at Ottawa. The Dominion Government requested that the Provincial Departments of Labour assist in these wage inspections in each Province. This was agreed to. In due course the Provincial officials were given credentials which permitted them to inspect payrolls and make investigations into complaints.

"Dominion Government procedure requires that when arrears of wages are found owing under a Federal contract, the employer must pay the amount of the arrears to the Receiver-General of Canada and distribution is then

made by the Dominion Treasury to the employee concerned."

As a result of these inspections, $3,915.31 in arrears of wages was collected to the benefit of 138 employees.

Summary of Arrears of Wages Collected.—The report gives a tabular summary of arrears of wages collected under different Acts affecting labour. In all, $17,715.83 was collected on behalf of 889 employees. The bulk ($10,508.87) of this total was collected under the Minimum Wage Act to the benefit of 497 employees; followed by $3,130.54 collected under Federal Construction Contracts; $2,830.55 under the Industrial Standards Act; $784.77 through inspections of supply contracts, Department of Munitions and Supply; $356.90 by way of Provincial Highway contracts; and $104.20 under the Master and Servants Act.

Employment Service.—Contained in the main report is the twenty-second and final report of the Employment Service of Canada covering operations in the province. On July 1, 1941, the Unemployment Insurance Commission absorbed the Employment Service and therefore the report only covers the period January 1, 1941, to June 30, 1941. During that time, 11,887 applications and 9,666 vacancies were registered with the Service. There were 9,048 placements made, 5,528 being of men and 3,520 of women.

Farm Wages.—The following were the average wages for farm labour: winter, $5 to $10 per month, plus board and lodging; spring, $10 to $25 per month, plus board and lodging.

LABOUR LEGISLATION IN QUEBEC AND NOVA SCOTIA IN 1942

Quebec

DURING the session of the Quebec Legislature which began on February 24 and ended on May 29, laws were enacted to facilitate the construction of workmen's houses and to provide for subsidies to the Desjardins People's Banks, the Stationary Enginemen's Act was revised, and statutes dealing with regulation of factories, licensing of electricians and pipe mechanics, and mothers' allowances were amended.

Workmen's Houses

An Act to allow municipalities to enter into agreements with Wartime Housing, Limited, a Dominion corporation, authorizes any municipal or school corporation to make such an agreement whenever Wartime Housing constructs workmen's dwellings within its limits to remedy a housing shortage occasioned by the establishment of war industries. The valuation of such houses for municipal and school purposes is to be $1,200 where there are less than two bedrooms and $1,500 where there are more than two. In a house containing several dwellings the same rates are to apply to each dwelling. The rate for general or special taxes and for school taxes is to be 1 per cent of valuation in each case and the occupants of the houses are to pay for public utility services and school fees on the same basis as other ratepayers. Wartime Housing is to bear the cost of streets and street lights, water and sewer services, fences, etc., and is to undertake to assign such works gratuitously to the municipality. These conditions are to apply as long as Wartime Housing Limited owns the houses. As soon as it disposes of any or all of the houses in a municipality the Act ceases to have effect and the purchasers of the properties are to be subject to the general law. In any case the special conditions granted by the municipality to Wartime Housing are to cease six months after the termination of the present war.

Subsidies to People's Savings Banks

Under an Act to promote the extension of people's savings banks, the Lieutenant-Governor in Council may authorize the Minister of Agriculture to grant an annual subsidy, payable from the Consolidated Revenue Fund, to the federation of People's Savings Banks known as the "Fédération de Québec des Unions Régionales de Caisses Populaires Desjardins," for the extension, maintenance and supervision of such savings banks. This subsidy may not exceed $80,000 for a period of five years, distributed as follows: $100 for each savings bank affiliated with the federation, up to the number of 600, and $50 for each such savings bank in excess of that number, up to a total of 1,000. The Lieutenant-Governor in Council may authorize the Minister to sign a contract fixing the conditions of payment of the subsidy. A statute of 1932 authorized the setting aside of $20,000 a year for ten years for the payment of grants to the Federation. (LABOUR GAZETTE, March, 1932, p. 298.)

Safety in Public Buildings

The Public Building Safety Act was amended to provide a new definition of "public building," which now includes stores having a floor area of over 3,000 square feet, instead of, as formerly, those employing ten or more clerks, and, as before, charity workrooms and buildings of more than two stories used as offices. Stations of any railway under the jurisdiction of the Parliament of Canada are exempt under the section requiring public buildings to afford all the security provided by the Act and regulations, and forbidding construction or alteration of such a building without a permit, or extensive alterations without an architect's certificate. The time limit for bringing an action for breach of the Act or regulations is extended from 60 days to six months.

Stationary Enginemen

The Stationary Enginemen Act, as revised, substitutes for the term "motive power" the term "stationary engine," defined to include steam boilers and engines, stationary internal combustion engines of over 25 h.p., refrigerating apparatus operated by motors whose total power exceeds 25 h.p., and the piping and accessories used for operating such engines. The term does not include steam boilers used for heating buildings other than those covered by the Public Building Safety Act and the Industrial and Commercial Establishments Act, boilers with safety valves set at a pressure of not more than 15 pounds to the square inch with a capacity not exceeding 75 h.p. and a heating surface not exceeding 1,125 square feet, or boilers used elsewhere than at buildings under construction with safety valves set at a pressure of over 15 pounds to the square inch but with a capacity not exceeding 15 h.p., and a heating surface not exceeding 225 square feet. Mines governed by the Quebec Mining Act are not subject to this Act.

The board of examiners, which, as formerly, is to consist of three members, is to be under the control of the Minister of Labour. Any examiner or inspector may enter premises and carry out an inspection at any hour. The person in charge of the engine must facilitate the inspector's work and must entrust stationary enginemen's work only to persons having the required certificate and keep the engine under the supervision of a stationary enginemen while it is in operation.

Regulations made by the Lieutenant-Governor in Council, in addition to dealing with examinations and the fees to be paid for them, may fix the period for which certificates are to be valid and the conditions of their renewal, define the classes of certificates and the conditions on which they are to be issued, and determine the manner of establishing the capacity of stationary engines.

As before, the Act provides for the keeping of a register of stationary enginemen and the making of annual reports to the Minister and exempts the holder of a certificate from the necessity of obtaining a licence from any municipal authority. The maximum fine for contravention of the Act or regulations is, as formerly, $100 and costs but a minimum fine of $25 is now provided. New sections enable enginemen to be sued for fees payable for renewal of their certificates, provide that prosecutions under the Act shall be instituted by the Attorney General instead of by an inspector, and prohibit the admission of evidence to show that proceedings were instituted as the result of a complaint or to discover the identity of the informer.

Under the Pressure Vessels Act, as amended, the presssure vessels which are subject to inspection on installation and annually thereafter, are those in public buildings as defined by the Public Building Safety Act, in gasoline distributing stations, and in industrial establishments as defined by the Industrial and Commercial Establishments Act. All refrigerating plants using more than 24 pounds of refrigerant must be inspected on installation and those run by a motor of over 4 h.p. are to be inspected annually. Annual inspections are now to be made free of charge. All pressure vessels manufactured in the Province must conform to specifications approved by the Chief Inspector but an accompanying affidavit to that effect is now required only in the case of those subject to annual inspection. A new class of certificate, "D", is to be issued for any used vessel before it may be sold. New sections relating to prosecutions are similar to those inserted in the Stationary Enginemen Act. They prohibit attempts to identify an informer and authorize a civil action to recover fees.

Electrical Works

The Electricians and Electrical Installations Act, which provides for the regulation and inspection of electrical installations in public buildings and for the licensing of electricians, was amended to redefine "public buildings." This term now has the meaning given to it in the Public Building Safety Act and includes, in addition, industrial establishments covered by the Industrial and Commercial Establishments Act, garages having a floor space in excess of 6,000 square feet, transformer rooms, and all installations of transformers on posts

and other supports set up on private property. No fee is to be charged for the annual inspection required by the Act. The time within which a prosecution for violation of the Act or regulations must be brought was extended from sixty days to six months after such violation comes to the knowledge of the inspector. Instead of one chief inspector, as formerly, two may be appointed to direct, under control of the board of examiners, the work of the inspectors. A provision is added, similar to that in the Stationary Enginemen Act, forbidding the admission of evidence to discover the identity of the informer in case of prosecution. The clauses fixing maximum salaries of the inspectors and of the chairman of the Board of Examiners, were struck out.

Pipe-mechanics

Amendments in the Pipe-mechanics Act provide that licences shall expire on March 31, the end of the fiscal year of the Province, enable the taking of action to recover fees for renewal of licences, and add a section similar to that in the Stationary Enginemen Act, forbidding evidence establishing the identity of an informer.

Industrial and Commercial Establishments

A new section in the Industrial and Commercial Establishments Act bars institution of a penal prosecution under the Act more than six months after the offence has come to the knowledge of the inspector. This section replaces one providing that no fine or imprisonment might be imposed unless proceedings were commenced within three months after the offence had come to the knowledge of the inspector or within 30 days after written notice of such offence given at any time by the inspector to the party in default.

Mothers' Allowances

Amendments in the Needy Mothers' Assistance Act authorize the granting of an allowance to the wife of a man who is totally disabled. Formerly benefit was only granted in such cases if the husband was being cared for in a public charitable institution or a mental hospital. Right to an allowance is also extended to the wife or widow of a British subject whereas formerly an applicant was required to be a British subject by birth or to have been one for fifteen years.

Compulsory Labour for Forest Fires

The Lands and Forests Act was amended to require every person who carries on forest operations or holds a licence to cut timber to place at the disposal of the Minister of Lands and Forests as many of his employees as he may consider necessary for the efficient organization of forest fire protection. Formerly, only railway companies were required to provide men under this section.

Resolution

On May 6 the Legislative Assembly adopted a resolution urgently requesting the Government of Canada not to intensify the recruiting of women beyond the limit of family requirements and particularly to do nothing of a nature to injure the Canadian home.

Nova Scotia

The Nova Scotia Legislature, which met on February 19, and was prorogued on March 28, enacted laws designed to meet the shortage of workers in coal mines, to provide extra housing accommodation and to authorize the licensing of scalers. Acts relating to the regulation of coal mines, workmen's compensation and mothers' allowances were amended.

Coal Mines

The Coal Mines Regulation (Wartime Emergency) Act provides that, notwithstanding any provision of the Coal Mines Regulation Act or of any other Act, the Lieutenant-Governor in Council may make regulations prescribing the qualifications required of persons employed at working faces in coal mines and the conditions as to supervision under which such persons are to be employed. Differing qualifications and requirements may be prescribed for differing conditions of supervision and any regulation may apply to all mines or to any particular mine or any part of it. The Act is to be in force only until the date declared by the Governor General in Council to be the date of termination of the present war, if the Legislature is then in session, or, if it is not then in session, until twenty days after the opening of the next session. When the Act expires the regulations are to cease to have effect.

Amendments in the Coal Mines Regulation Act include a revision of the sections relating to qualifications of coal miners. As formerly, no person may have charge of a working face unless he has a first-class certificate issued

under the Act. Persons employed at the face must have first or second-class certificates but a person at least 18 years of age, if constantly accompanied by and under the immediate supervision of the holder of a first-class certificate, may be employed for not more than six months. Workers employed to cut, shear, mine, bore, or loosen coal at the face must have first-class certificates or have second-class certificates and work under the close supervision of the holder of a first-class certificate. As before, an applicant for a second-class certificate must be at least 18 years of age and have been employed underground for a year, but an amendment enables a person with six months' underground experience to obtain the certificate, provided such experience was at the working face. The section requiring an applicant for a fireman's certificate to have served for a year as fireman at a steam boiler was amended to make it clear that such boiler must have been at a coal mine. A new section forbids the use of open lights at a mine in which gas (methane) has been found to accumulate in any place in quantities in excess of three-quarters of one per cent as shown by an analysis of samples of air or by an approved gas tester. Examinations for gas are to be made with a locked flame safety lamp or other gas tester approved by the Minister, instead of with a locked safety lamp as formerly. An amendment was also made in the section forbidding explosives to be taken into a working place for two months after inflammable gas has been found on three consecutive days in quantity sufficient to show in a flame safety lamp except where employees are out of the mine or in cases of stonework and sinking shafts where ventilation is so managed that the return from the place where the explosive is used passes into the main return air course without passing any place in actual course of work. The amendment provides for exception to be made also in any case where the chief inspector gives written permission.

The section providing for special examiners into accidents causing death, was redrawn and now enables the Lieutenant-Governor in Council to appoint one or more special examiners and to require each to act in a designated area or anywhere in the province. As before, special examiners have the powers of Commissioners under the Inquiries Act, of the inspector in respect of formal investigations, and of a coroner. A special examiner is not to report his findings to the inspector, as formerly, but to the Minister of Public Works and Mines, who is authorized to make them public, if he thinks fit.

When a shot flames on firing it is to be extinguished and immediately reported to the Deputy Inspector for the district. The place in which it occurs is to be guarded and left unworked until inspected by the Deputy Inspector. All flamed shots are subject to inquiry by the Deputy Inspector and any certificate of any person or persons involved may be revoked or suspended by the Minister.

The engineer in charge of a stationary engine or an engine used for hoisting men, coal or materials, may not leave it until he has received a predetermined signal from someone in attendance at the other end of the rope, and he must in no case leave his engine controls without ascertaining that the engine is braked or in gear or otherwise locked to prevent any movement of the drum or rope.

Workmen's Compensation

A number of changes were made in the Workmen's Compensation Act. Where a workman is found dead in the underground workings of a coal mine in a place where he had a right in the course of his employment to be, it is now to be presumed that death was the result of personal injury by accident arising out of and in the course of his employment, unless there is sufficient evidence to rebut such presumption. Formerly, such evidence has to be furnished by witnesses present at the time of death.

Notwithstanding the provisions of the 1941 amending Act that accounts for medical aid must be rendered within three months after such aid was furnished, the Board is given authority to pay such an account in respect of an injury happening after April 5, 1941, if application for payment was made before February 28, 1942. The section requiring an employer to convey an injured workman to a place where he may receive medical aid was amended to provide that, as an alternative, the employer may obtain the necessary medical aid for the workman. In such cases the same conditions apply as when the workman is conveyed to another place for treatment; if the employer fails to obtain such aid any other person may do so and if the employer fails to pay the reasonable charges the Board may pay them and recover double the amount from the employer.

A new section, which will come into force on Proclamation, brings all members and employees of the Board under the Public Service Superannuation Act and empowers the Board to make the necessary deductions from salaries and to pay from the Accident Fund any amounts which, in the case of other classes of public service employees, would be payable from the Consolidated Revenue Fund. Under another amendment the cost of publishing the annual report of the Board is also to be paid from the Accident Fund.

An employer carrying on an industry under Part I must keep such records or accounts as may be reasonably required to show a true record of the wages earned. The section which provides that where an employer fails to keep adequate records or refuses to produce them for inspection he may be assessed on the Board's estimate of his pay roll, was amended to extend the penalty to cases in which the employer fails to produce such records or fails or refuses to produce any other book or record pertaining wholly or partly to his industry and makes it clear that the penalty section applies not only to cases of failure to keep time sheets and wage schedules but also to default in keeping the books required to be kept by sawmill operators and dealers in lumber, showing particulars of contracts, quantity of lumber produced, and other items. The schedule of industrial diseases for which compensation is payable was amended to include silicosis in "mining", instead of in "coal mining", as formerly.

Employment of Non-Residents

The Nova Scotia Labour Act, which is to remain in force until May 1, 1943, is a revision, without material change, of an Act first passed in 1933 and renewed annually since then. The Act forbids any person or corporation employing 25 or more workers to hire any person who has not been a resident of the Province for at least one year unless the person hired produces a certificate from the Government employment agent or municipal clerk in the place where he is to be employed stating that there are no unemployed persons resident in such place who are capable of doing and willing to do the work.

Licensing of Workmen

The Scalers' Act, which will come into force on Proclamation, provides for the examination and licensing of scalers and forbids any unlicensed person to act as a scaler unless the Minister of Lands and Forests is satisfied that the services of a licensed person are not procurable.

An amendment in the Theatres, Cinematographs and Amusements Act empowers the Board of Censors to revoke or suspend any licence issued under the Act or regulations.

Fire Escapes in Shops and Offices

The Fire Prevention Act was amended to add mercantile establishments and office buildings to the list of public buildings, which already included factories, covered by sections of the Act relating to fire escapes. These sections empower the local Board of Fire Escapes to inspect all such public buildings, to order the proper maintenance and clear indication of the position of fire escapes, the enlargement of doors, passageways, staircases and windows, and the alteration of furnaces, chimneys and other heating apparatus.

Mothers' Allowances

Amendments in the Mothers' Allowances Act enable an allowance to be granted after June 1, 1942, to a mother whose husband is an inmate of a public institution for the treatment of mental illness or tuberculosis. An allowance may also be paid in respect of an adopted child, provided that such child was legally adopted by the applicant and her husband before the husband's death or disablement.

Wartime Housing

An Act to enable cities, towns and municipalities to enter into agreement with the Crown in respect to wartime housing gives authority for the making of such agreements, either with the Dominion Government or with Wartime Housing, Limited, or with both, for the construction of housing accommodation and the supplying of the necessary services to provide for water, for the disposal of sewage and for other conveniences.

The Halifax Charter was amended to enable that city also to make agreements with Wartime Housing, Limited, for the purpose of providing houses to be rented to persons recommended by the city, or by any persons or committee appointed by it, as provided in the agreement. The city may also guarantee the payment of rent by the persons so recommended and may borrow the sums required to give effect to such guarantee from any bank or fund and include them, with interest, in the civic estimates.

Poll Tax

Under an amendment in the Assessment Act, the maximum poll tax which may be imposed by an incorporated town upon male residents between the ages of 18 and 60 who are not otherwise assessed, is raised from $5 to $10. The minimum tax remains at $2 but, as formerly, persons under the age of 21 years may be exempted or may be required to pay an amount less than $2.

Co-operative Associations

Changes in the Co-operative Associations Act enable an association to deal in services and to become a member, shareholder, or officer, of any other company having similar objects. New sections forbid an association to operate a store or open a branch without

the consent of the Inspector of Co-operative Associations, which must not be given if the Inspector considers that the financial condition of the Association does not warrant such a step or that the operation of such store or branch would be detrimental to the existence of another association. A maximum penalty of $25 a day may be imposed on any officer of an association for contravention of this provision or for failure to forward an annual financial statement to the Registrar within 30 days after the annual meeting. Such statement may be verified by a competent auditor or, as formerly, by the oaths of the President and Secretary. The section requiring every association to set aside, annually, at least 5 per cent of its net profits for a reserve fund, to be kept liquid and intact in trustee funds, was replaced by a section requiring the same sum to be set aside for a reserve fund until an amount equal to at least 30 per cent of the paid-up capital has been accumulated. The memorandum of association of every co-operative association is to be deemed to include the objects and powers, as amended.

Bills Not Passed

A Bill to incorporate the New Longshoremen's Association of Halifax failed to pass.

WEIGHT LIFTING BY WOMEN IN INDUSTRY

THE entry of large numbers of women into war industries has focussed attention on the need for protecting them from injury caused by lifting heavy weights. Such protection is particularly needed for the many women now being recruited into Canadian war industries who are comparatively unused to the regular lifting of heavy loads. A Welfare Supervisor testifying before the British War Cabinet Committee on Women in Industry, which reported in 1919, declared:

> Lifting is partly a matter of knack and training, and women are inclined to exhaust themselves unnecessarily at first, though they improve greatly with practice.

A recent survey of New Jersey metal and machinery manufacturing industries revealed that before the war no woman was lifting weights exceeding 25 lbs.

The dangers of carrying heavy weights have been demonstrated by several studies. An international Labour Office brochure on women's work issued in 1934 stated:

> When women have habitually to carry heavy loads...skeletal deformities are noted...alterations in the thoracic capacity and abdominal walls. Thus for example, a broadening in the lumbar region of the spine in women who carry loads, with crushing together of the vertebrae, bringing about diminution in height, deformity of the pelvic basin with harmful effects on the development of pregnancy. Occupational cramp of the lateral muscles of the neck, pains of the brachial plexus, suboccipital nerves, moveable kidneys, cardiac and thyroid hypertrophy, etc., have been reported.

The U.S. Women's Bureau, in a recently-issued pamphlet on "Lifting Heavy Weights in Defence Industries" declared that "continual lifting of heavy loads results in deformities of bone-structure that may have serious effects at childbirth." A study reported in the I.L.O. brochure revealed a much higher percentage of still-births among women employed on heavy work than among the general population. Many of the medical authorities submitting evidence to the 1919 British Committee on Women in Industry urged that the lifting of heavy loads be forbidden immediately before and after confinement. The International Labour Convention on the employment of women before and after childbirth stipulates that women must not be employed for six weeks after childbirth and recommends that they should be permitted to leave their jobs six weeks before their confinement. The present British law forbids employment within four weeks after childbirth.

The British Industrial Health Research Board in 1927 made a study of 14 industries employing women and young persons on weight-lifting jobs. It was found that women in the sanitary pipe industry lifted as much as 6·6 tons a day and in the tin plate industry, 3·25 tons. In the paper industry women lifted loads equivalent to 57 per cent of their body weight. In the cotton industry the percentage was 56 and in the tin plate industry, 55. Examination of the women and young persons employed in these industries revealed that the women did not appear to be suffering any ill-effects from such work but many of the young persons had poor physique partly attributable to the nature of their employment. The report recognized, however,

> that the heaviest industries attract, or, perhaps more accurately, *retain* the strongest women; the weaker gravitate through various trades and find their physical level.

Where there is no regulation of weight-lifting this process may be very costly to the individual, particularly to young persons.

One interesting fact revealed by this study was that in industries where the worker may select the size of the load, women were "wisely self-protective" but young persons,

particularly boys, over-estimated their strength. In the paper industry a worker with 35 years' experience selected a load 49 per cent of her body weight while a girl of 17 with six months' experience chose one equivalent to 70 per cent of her body weight. The report concluded that

> young persons require more regulation and supervision in their work if they are to avoid overstrain in the physically exacting period of adolescence....Continued strain cannot but have a pernicious effect, which only show itself indirectly in the multiple sequelae of fatigue, increased incidence of accidents, lowered resistance to infection, increased suggestibility with its manifold and depreciating effects—to name but a few.

During the last war women in British war industries successfully handled weights in excess of 50 pounds, but the committee on Women in Industry warned that

> the practice requires careful watching, however, if the risk of accident or internal displacement is to be avoided, and the raising of weights up to or above the head is particularly liable to lead to strain.

Since the last war a number of studies have been made to determine the optimum load for the average woman, the most satisfactory methods of lifting and carrying and the harmful effects of lifting excessive weights.

In determining the optimum load most investigators recognize that numerous factors besides weight must be considered. These include the shape and compactness of the load, the mode of handling it, the duration of the lifting and carrying, the distance the weight has to be carried, the type of surface traversed, the levels at which the load is picked up and deposited, the pace of the work and the temperature and atmosphere in which it is performed, the aggregate load carried in a day and the physique and training of the worker.

Several estimates of the optimum load have been made. The Industrial Health Research Board concluded in 1927 that the optimum load is 35 per cent of the body weight and that, in general, loads should not exceed 40 per cent of the body weight for continuous lifting and 50 per cent for intermittent lifting. For the average woman in industry these percentages would mean weights of 45 and 55 lbs. A healthy well-trained adult might exceed these maxima by 20 per cent without undue strain to herself if the load is compact and easily handled. The Board was of the opinion that young persons should not be permitted to carry more than 25 to 30 lbs. if under 16 years of age and 40 lbs. if over 16.

The British Home Office in a Safety Pamphlet issued in 1937 suggested certain load limits but added that all loads should be based on physical data for the individual worker. For men it recommended a maximum of 130 lbs. for compact loads. For women maxima of 65 lbs. for intermittent work and 50 lbs. for continuous work were suggested. Male young persons from 16 to 18 years on continuous work might carry 45 lbs. and on intermittent work, 60 lbs. Female young persons in the same age group should be limited to 40 lbs. on continuous work, 56 on intermittent work. A maximum of 35 to 40 lbs. was suggested for young persons under 16.

Attempts to regulate by law the loads which workers may carry began in Britain during the last war. In 1916 a General Order was issued by the Home Office stating that "a woman or young person should not be allowed to lift, carry or move anything so heavy as to be likely to cause injury to them." Earlier, weight lifting by women and young persons in the pottery industry had been regulated under the clause in the Factories Act of 1901 empowering the Secretary of State to draw up rules for the safety of persons employed in dangerous industries. The 1937 Factories Act authorizes the Secretary of State to prescribe maximum weights for various types of workers and forbids the employment of young persons in weight-lifting jobs likely to cause them injury. The Flour Mills Order of January, 1942, permits a woman to carry 65 lbs. alone or 140 lbs. with the help of another. A maximum of 65 lbs. for women is also fixed in a 1926 order making effective an agreement in the woollen and worsted industry, but if the load is bulky the maximum is reduced to 50 lbs. The agreement permitted girls under 18 and boys under 16 to lift 50 lbs. in a compact load and 40 lbs. if the load was bulky.

In the United States six States have had legislation prescribing weight limits on their statute books for some time. Five States set load limits ranging from 15 to 75 lbs. and one merely prohibits the carrying of excessive weights. Five States regulate the employment of women in core rooms where much weight-lifting is done.

A survey of 62 American companies made in 1942 by the Industrial Relations Section of Princeton University revealed that many companies have rules forbidding women to handle loads above a certain weight and many also provide mechanical devices to eliminate the need for lifting. The load limits set by the companies varied from 15 to 50 lbs. even in States permitting higher maxima. In one case the load limit was set by collective agreement. One company ruled that "any job requiring lifting by a woman must be approved by the company physician."

The U.S. Women's Bureau has endorsed the optimum of 35 per cent of body weight recommended by the British Industrial Health Research Board. It favours State legislation

empowering the factory inspection authorities to set load limits for each industry rather than the prescription by law of fixed maxima for all industries.

None of the Factory Acts of the Canadian provinces deals specifically with the problem although Nova Scotia, Manitoba, Saskatchewan and British Columbia have sections prohibiting the employment of women, young girls and children in such a manner that their health is likely to be permanently injured and all the other provinces except New Brunswick and Prince Edward Island declare it unlawful to employ anyone so that their health and safety is endangered.

The various methods of weight lifting have been studied to determine which is the least costly from a physiological point of view. Most investigators agreed that methods which interfered least with balance or centre of gravity, normal gait, posture, breathing and circulation, were the most efficient. The Industrial Health Research Board on the basis of a series of experiments in 1924 and 1927, concluded that carrying by a yoke on the shoulders was the best, and hip-carrying the worst of eight methods studied. Carrying a bundle in each hand was quite efficient except for the local strain on the arms. The use of a tray held in front of the body or slung from the shoulder was also fairly good but it caused strain on the arms and interfered with gait, besides contributing to accidents by preventing the worker seeing where he was stepping. Head-carrying produced tension and interfered with breathing and rucksack-carrying caused a pronounced stoop. Shoulder-carrying altered the body's centre of gravity but was otherwise efficient.

The Women's Bureau pamphlet on weight lifting recommended shoulder-carrying as the most economical method because it leaves the limbs free and does not cause chest-fixation. It approved tray-carrying and carrying bundles at the sides, one in each hand for short distances only and disapproved of carrying on the hip. It stressed the importance of correct lifting to avoid undue strain on certain muscles. Most authorities recommended frequent rest pauses for heavy work so that awkward positions are not maintained continuously. The Women's Bureau also urged pre-employment physical examinations for women seeking jobs in heavy industry to weed out the unsuitable ones.

Employers may minimize the dangers to women workers from handling too heavy weights by instructing them in the most efficient ways of lifting and carrying, by organizing the work to eliminate much lifting and carrying and by providing mechanical devices. The latter must be conveniently situated and easy to use or they will be ignored by the workers. Hoists, cranes, conveying belts, hand barrows, trucks and wagons can be used to lift or carry materials. In some British shell factories all the machine work on shells weighing from 90 to 160 lbs. is being done by women by means of a system of telphers and high-level trucks. The telphers convey the shells from the high-level trucks into the machines and lift them from the machines back on to the high-level trucks so that the women do no heavy lifting or carrying. The shells are raised and lowered by pneumatic hoists. One girl can manipulate both hoist and travelling control. Modern engineering has designed lifting and carrying devices to meet almost every problem encountered in handling heavy weights, but employers have been slow to install such machinery while there was a plentiful supply of male labour.

UNITED STATES EMPLOYEE THRIFT PLANS IN WARTIME

THE National Industrial Conference Board Inc. New York, has issued a report entitled *Employee Thrift Plans in Wartime*. The report shows a definite trend in employees' thrift plans since the last survey was made in 1936 by the Board.

In 1936 it was found that a considerable proportion of the savings plans in co-operation with the banks had been discontinued since the 1927 survey. This was attributed to "the many bank failures and the cooling interest of banks in this kind of account." Since 1936, the report states "the savings bank plans have never recovered the popularity which they enjoyed in the Twenties. The plans in force have proved very satisfactory in aiding the employee to save systematically, but the rate of growth of new plans of this character has been very slow, as only about a sixth of the plans included in this classification was introduced since 1930."

In its conclusions, the report continues:

"Several other types of employee thrift plans have so lost favor with industry that they have ceased to be a significant factor in promoting employee savings. At one time plans which provided for the deposit of the workers' savings in the company's business were of considerable importance, but during recent years their popularity has waned because other mediums for savings have been devised which relieve the company of the responsibility for the employees' savings, and because the acceptance of deposits by the em-

ploying company is forbidden in many states unless it is incorporated under the banking law.

"Plans under which the employees' savings are pooled and invested in securities are in reality small investment trusts. Before 1929 they enjoyed a considerable vogue when stock prices were soaring, but the stock market crash eventually caused the abandonment of a considerable proportion of these plans. This trend was noted in the 1936 survey, and it has continued unchecked since that time, with several well-known companies discontinuing their plans of this nature for a variety of reasons.

"Experience with employee stock-purchase plans was also unfortunate during the depression years. In a three-year interval ending in 1932, stock market values dropped precipitously, and at the same time wage-earners suffered widespread unemployment and greatly curtailed earnings. This situation made it extremely difficult for employees in companies which were hardest hit by the depression to retain possession of their stocks, so that in many instances they were obliged to dispose of their holdings at a figure far below the purchase price. Thus a plan which had been devised to promote employee savings and to better employer-employee relations failed of its objectives because of factors beyond the control of the employer. Consequently a large proportion of these employee stock purchase plans was discontinued. Few active plans were discovered in the course of the present investigation. The group studied comprised twenty-one plans of which only two were adopted since 1930.

"By and large the credit unions withstood the depression years very satisfactorily. This statement is borne out by statistics compiled by the Federal Government and the Conference Board. According to the United States Bureau of Labour Statistics, the number of credit unions in operation increased from 838 in 1929 to 1,472 in 1932, although during the same interval, the share capital, which represents the employees' savings, decreased from an average of $92 per member to $70. From 1929 through 1940, the credit unions increased from 838 to 9,510 or a tenfold rise, while membership which rose from 264,908 to 2,816,000 exhibited a similar percentage increase.

"These data do not separate occupational credit unions from other types. The Credit Union Section of the Farm Credit Administration, however, compiles statistics for the federal-chartered credit union in occupational groups. Since the Act was passed in 1934 to the end of January, 1942, the number of federal-chartered credit unions in occupational groups had grown to 3,664.

"The 1936 survey of the Conference Board showed an equally satisfactory condition. Forty-six credit unions furnished complete statistics for the six-year period ending 1935. During that time, these credit unions lost $31,327 in defaulted loans, or 0·64 per cent of the total loans. Credit unions included in the 1936 study apparently experienced little difficulty in granting loans and were able to meet all demands for withdrawals during the depression.

"Satisfactory experience with credit unions has continued to the present. Three-fourths of the companies with credit unions reporting in the present study had no criticism of their administration. The credit union had promoted thrift, had made credit available to its members at reasonable rates, had improved employee morale and strengthened employer-employee relations. The chief complaint made in connection with credit union operation in a fourth of the companies was the ease with which the members could borrow and the laxity evident in requiring repayment of delinquent loans. Other complaints made by the company management were the degree of responsibility which it must necessarily shoulder for the solvency of the credit union, and the amount of credit union business which was conducted on company time. Only five credit unions were found to have been liquidated in the present investigation.

Employee Participation in Thrift Plans

"A comparison of employee participation in thrift plans in 1936 and 1941, indicates certain trends. In general, the participation in plans in co-operation with savings banks and in pooled savings and investment plans has decreased appreciably. This is in line with previous observations of diminished interest in these types of plans, and may be of significance even though the size of the sample was smaller in 1941, and the companies were not identical.

"The percentage of participation in credit unions is considerably higher than in other types of savings plans. However, borrowers as well as savers are included in the credit union membership, whereas under the other types periodic savers only are included. The percentage of participation in the credit unions covered in the present study is appreciably higher than in unions included in the 1936 survey. This may be attributed in part to the fact that the 1941 survey was restricted to credit unions which have been in existence for five years or over, while many of those covered in the 1936 study were relatively new organizations. The older and more successful credit unions would obviously have attracted a wider membership."

MAINTENANCE OF UNION MEMBERSHIP CLAUSE APPROVED BY UNITED STATES WAR LABOR BOARD

DURING the middle part of June there were three decisions of the United States National War Labor Board on the union security issue in which, for the first time, two of the employer representatives on the Board voted with the majority in favour of the maintenance of membership formula. The National War Labor Board consists of four representatives each of employers, labour and the public. It succeeds the National Defence Mediation Board and was set up on January 12 after a conference of labour and industry, held at the request of the President in the last half of December, had agreed that there would be no strikes or lockouts, that all disputes would be settled by peaceful means and that the President should establish a Board to handle disputes. In the many disputes the Board has dealt with so far there have been two major issues: union security and wages.

The union security issue, i.e., the question of providing unions means whereby they can retain their status and membership at a time when they have voluntarily waived some of their most important rights, has proved to be a particularly difficult problem to both the Defence Mediation and War Labor Boards. The latter, however, seems by now to have developed a fairly clear-cut and acceptable policy with regard to it. The unions have usually demanded a closed shop provision requiring that all the employees of a given firm must, as a condition of employment, become and remain members of the union in good standing. The employers, on the other hand, have held that to condition the right to work in this manner is an illegitimate interference with the freedom of the individual worker. The War Labor Board has attempted to steer a middle course between these two positions. On no occasion has it gone so far as to impose a closed shop, but, at the same time, the majority of the members, including all the public representatives and now also two of the employer representatives, has taken the position that, in the words of one of the public members, "the unions, with the unusual risks of the war pressure against strikes and general wage increases, except in the nature of equitable adjustments, need some security against the disintegration under the impact of war."

The solution which has been devised is the maintenance of membership clause. The exact details of such a clause vary from case to case according to the circumstances, but there is one fundamental provision, viz., that after a specified date no existing members of the union may terminate their membership for the duration of the contract. In most of the cases involving union security which it has dealt with, the Board has ordered the incorporation of clauses of this nature in the contracts between the employers and the unions.

This solution was developed empirically. The foundations were laid by the National Defence Mediation Board which managed to settle a number of prolonged and difficult disputes by adopting it. The War Labor Board, in the successive cases it has had to handle, has built on the work of its predecessor, and out of this process of determining each case on its merits a definite pattern of decisions on union security has evolved. The new Board early showed that it favoured the maintenance of membership provisions when in the Marshall Field case, which was widely regarded as a test case, it decided upon such a provision on the condition that each employee, to be bound by it, must voluntarily authorize the check-off in writing. The principle became firmly established when it was adopted, with variations in details, in three successive major disputes: Walker-Turner, International Harvester and Federal Shipbuilding.

In the Marshall Field case one of the employer representatives voted with the public and labour members. In the three major cases referred to, however, and also in all other cases where the issue was involved, the employer members voted solidly against the maintenance provision, though the Vice-Chairman of the Board stated in a speech of May 20 that "the only difference was one of implementation."

It would appear that this difference, whatever its nature, is now disappearing. In a decision announced on June 12 regarding Ranger Aircraft Engines, Farmingdale, Long Island, two of the employer representatives voted with the majority to make a ten to two decision in favour of granting the United Automobile Workers (Congress of Industrial Organizations) a clause requiring continued membership in the union as a condition of employment for all workers who were in good standing 15 days after the Board's order. The same vote was recorded in an identical decision regarding the Ryan Aeronautical Corp. of San Diego which was reported on June 18. In a third case, covering E-Z Mills, Bennington, Vt., the International Ladies Garment Workers (American Federation of

Labor) were granted a maintenance of membership clause by an eight-to-one vote, the same two employer representatives as in the previous cases voting with the majority.

The explanation of this change of position on the part of two of the employer representatives is that in the three cases noted an escape clause was devised. Under this clause, union members who wished to withdraw from the unions before the rulings went into effect, and thus escape the maintenance requirement, were permitted to do so. One of the employer representatives concerned stated that the Board had recognized "one of the main principles the employer members have contended for.....I have voted with the public and labour members because they have met a main objection to any union maintenance of membership clause."

The public member who wrote the majority report in the Ryan Aeronautical case summed up the situation as follows: "The fourteen months struggle over union security from Snoqualmie Falls to E-Z Mills has resulted ....in an almost unanimous Board backed by increasingly strong public opinion for individual liberty, union security and maximum production....The maintenance of membership clause provides, during this war, for a free and fair basis for responsible union-management co-operation for all-out production."

Release of Civil Defence Personnel for Employment in War Industries in Great Britain

The British *Ministry of Labour Gazette* for May outlines the steps taken by the British Government to release about one-third of the total number of whole-time Civil Defence workers for employment in war industries. As far as possible, the workers will be released indefinitely, but where this is not possible workers may be released conditionally for temporary employment in war industry, either in factories or under the local authorities, for periods of not less than a week.

In the first place, the release is to be sought of men and women whose past experience fits them for professional and skilled work in industry, and on the basis of a recent industrial registration of Civil Defence personnel local offices of the Ministry of Labour and National Service are to prepare lists of those whose services are most urgently required and are then to arrange with the Civil Defence authority for their release.

Civil Defence workers who are released, whether indefinitely or for short periods, are to be employed under normal industrial conditions, including payment at ordinary industrial rates, and their pay and privileges as whole-time members of the Civil Defence Services will, therefore, be suspended during their release.

For whole-time Civil Defence workers who cannot be released even temporarily, arrangements are being made whereby they may be employed during some of their Civil Defence duty hours on useful work carried out by local authorities or, under certain conditions, on essential work of extreme urgency for outside employers.

The general principles governing the release of workers from the Civil Defence General Services are also to apply to release from the National Fire Service, subject, however, to the special requirements which this Service has to meet.

Persons released to go into war industries will be under obligation not only, as at present, to return to whole-time Civil Defence employment, if called upon to do so, but also, by virtue of a suitable amendment of the relevant Defence Regulation, to perform part-time duties in the meantime, if so required.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Statement Covering Unemployment Insurance Fund from Commencement of Contributions on July 1st, 1941, to End of May, 1942—References to Courts of Referees—Report of Employment and Claims Offices —Employment Conditions at End of June

THE balance at the credit of Canada's Unemployment Insurance Fund on May 31 last was $54,488,668.24 This is the situation after eleven months' operation, collection of contributions having started on July 1, 1941. Total contributions from employer and employee made in respect of the period ending May 30 were $45,152,771.66. The Government contribution, which is one-fifth of the total employer-employee contributions, amounted to $9,030,554.32. The Fund, by the end of May, had earned interest amounting to $426,840. The cumulative total was $54,-610,165.98.

On the other side of the ledger were total expenditures of $121,497.74 for benefits. While benefit expenditures were small in relation to total contributions, it must be remembered that payment of benefits started only in February last. Also, as this is a period of high employment, claims for benefits are not numerous. The Fund, therefore, is building up rapidly.

As provided in the Unemployment Insurance Act, investments of the Fund are made only on the authorization of an Investment Committee of three members. This committee is headed by the Governor of the Bank of Canada and on it are the Deputy Minister of Finance and the Deputy Minister of Labour. The Bank of Canada are the statutory fiscal agents for the Commission.

On page 815 is shown a statement of revenue and expenditures of the Insurance Fund for the eleven months ended May 31, 1942.

Unemployment Benefit

Up to the end of May, 1942, the total number of benefit claims received by the Unemployment Insurance Commission for adjudication was 8,961. These were divided by areas as follows: Pacific, 649; Edmonton, 555; Saskatoon, 441; Winnipeg, 909; North Bay, 569; London, 477; Toronto, 1,721; Quebec, 3,013; Maritimes, 627.

The number of benefit cheques issued since February, when benefit payments started, up to the end of May, was 14,087. The total amount of benefits paid was $121,497.74.

Courts of Referees

The Unemployment Insurance Act provides that if a claim for benefit is not allowed by an Insurance Officer the claimant may have his case referred to a Court of Referees. The following table shows the number of requests for reference to Courts of Referees and their disposition in the nine insurance districts of Canada, as at June 27 of the present year.

Insurance Office	Request for Reference	Not Yet Heard	Withdrawn	Adjourned	Heard	Court's Decision

The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to May 31st.

Report of Employment and Claims Offices for May, 1942

Reports of the Employment and Claims Offices of the Unemployment Insurance Commission for the month of May, 1942, showed a gain of over 8 per cent in the average daily placements as compared with those of the preceding month, but a decline of 29 per cent in comparison with those of May a year ago. Increased placements over the previous period were registered in all industrial divisions, except agriculture and logging, in which moderate losses occurred, the highest gains being in construction, manufacturing and services. In comparison with the corresponding period of 1941, heavy reductions in services, construction and logging and fairly substantial declines in agriculture and transportation were partly offset by gains in manufacturing, trade, mining and finance, the largest of which was in manufacturing.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each hundred applications for work registered, each month, at Employment and Claims Offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications followed an upward course throughout May, that of vacancies showing a decidedly upward trend and attaining at the close of the month a level over eighteen points higher than that recorded at the end of the corresponding period a year ago; the level of placements, however, was nearly eight points below that shown at the close of the same month of 1941, the ratios in May, 1942, standing at 93·4 and 60·6, respectively, in comparison with 74·8 and 68·5 reached in May last year.

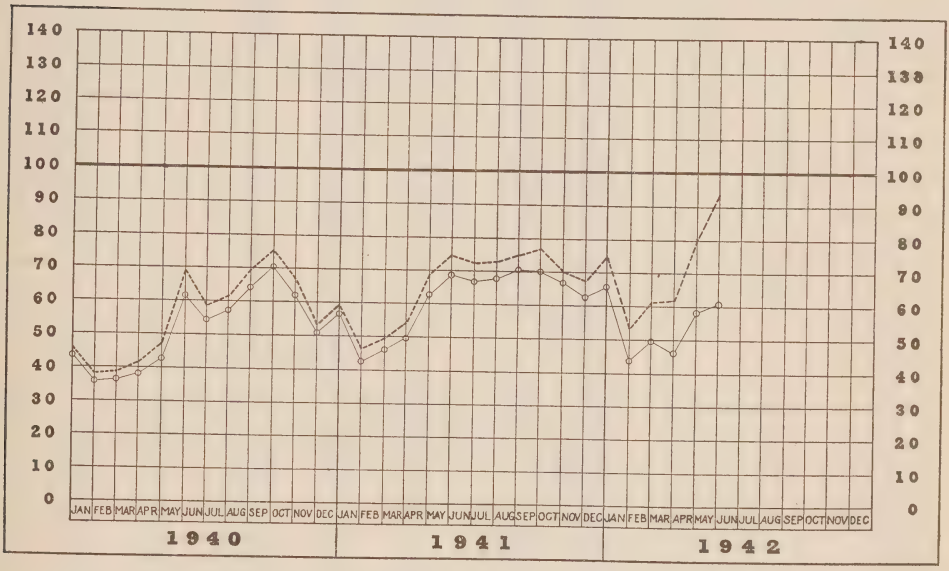
The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during May, 1942, was 2,111, as compared with 1,742 during the preceding month and with 2,115 in May a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,260, in comparison with 2,172 in April and with 2,826 during May last year.

The average number of placements made daily by the offices of the Commission during May, 1942, was 1,368, of which 968 were in regular employment and 400 in work of one week's duration or less, as compared with a total daily average of 1,262 during the preceding month. Placements in May, 1941, averaged 1,937 daily, consisting of 1,125 placements in regular and 812 in casual employment.

During the month of May, 1942, the offices of the Commission referred 38,102 persons to vacancies and effected a total of 34,200 placements. Of these, the placements in regular employment were 24,200, of which 19,377 were male and 4,823 female, while placements in casual work totalled 10,000. The number of vacancies reported by employers was 36,541 for men and 16,218 for women, a total of 52,759, and applications for work numbered 56,475, of which 39,824 were from men and 16,651 from women. Reports for April, 1942, showed 43,534 positions available, 54,297 applications made and 31,529 placements effected, while in May, 1941, there were recorded 54,982 vacancies, 73,458 applications for work and 50,337 placements in regular and casual employment. The following table gives the placements effected by Employment Offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (5 months)	93,069	42,933	136,002



Nova Scotia and Prince Edward Island

Employment and Claims Offices in Nova Scotia and Prince Edward Island were notified of 26 per cent more vacancies than in April and 32 per cent more than in May, 1941. Placements also were 28 per cent above those of the previous month and 24 per cent in excess of the corresponding period a year ago. Appreciable gains in placements over those of May, 1941, were recorded in construction and manufacturing, but these were largely offset by a substantial decline in services. Of the remaining groups, increases were reported in mining and trade and declines in transportation, logging and agriculture, none of which was outstanding. Industrial divisions in which most of the placements were effected were: construction, 1,729; services 1,058; manufacturing 580 and trade 115. There were 2,513 men and 248 women placed in regular employment.

New Brunswick

During May, vacancies offered through Employment and Claims Offices in New Brunswick, were 34 per cent higher than in the previous month, but more than 4 per cent below those of the corresponding period last year. Placements were 37 per cent in excess of April, but 18 per cent lower than in May, 1941. A fairly substantial decrease in services, augmented by a small loss in construction, was responsible for the net reduction reported, as gains registered in all remaining groups, the largest of which were in transportation and manufacturing, were insufficient to offset the previously mentioned declines. Industries in which employment was found for more than 100 workers included: services 521; construction 375; transportation 150 and manufacturing 143. There were 699 men and 78 women placed in regular employment during the month.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Quebec

Employment opportunities, as indicated by orders received at Employment and Claims Offices in the province of Quebec during May, were 60 per cent better than in April, but 35 per cent fewer than in May, 1941. Placements were 16 per cent above those of the preceding month, but 67 per cent lower than in the corresponding period last year. Greatly reduced placements from May a year ago were reported in services, construction, logging and transportation, which accounted for the decline for the province as a whole, a smaller loss in agriculture being more than offset by a moderate gain in manufacturing; slight increases also were reported in mining and trade. Groups in which most of the placements were effected were: manufacturing 1,649; services 1,540 and construction, 1,314. During the month 3,150 men and 822 women were placed in regular employment.

Ontario

Orders listed at Employment and Claims Offices in Ontario during May were 13 per cent higher than in April, but 3 per cent below those of May a year ago. There was a decline in placements from the previous period of over one per cent and from the corresponding month last year of 29 per cent. Placements under construction and services were considerably fewer than during May, 1941; and smaller declines were registered in logging, agriculture and transportation, as well as a nominal loss in mining. These decreases, however, were partly offset by gains in other groups, the largest of which was in manufacturing. Placements by industrial divisions included: manufacturing 4,604; services, 4,165;

* 1,756 placements effected by offices now closed.

construction 2,278; trade 816; logging 764; farming 477; and transportation 400. Placements in regular employment numbered 7,673 of men and 2,334 of women.

MANITOBA

Opportunities for employment, as shown by calls received at Employment and Claims Offices in Manitoba during May, were 18 per cent in excess of those of the previous month and 41 per cent above those of May, 1941. Placements showed an advance of 26 per cent over April and a fractional gain over the corresponding month last year. The most important changes in placements from May, 1941, were gains in manufacturing, transportation and trade, which slightly exceeded the losses reported in construction, agriculture and logging. Industrial divisions, in which the majority of placements was effected, included: services 1,508; manufacturing 576; construction 305; logging 254; trade 175; agriculture 168; and transportation 144. There were 1,427 men and 355 women placed in regular employment.

SASKATCHEWAN

There was an increase in vacancies offered at Employment and Claims Offices in Saskatchewan during May of 2 per cent over April, but a loss of nearly 5 per cent in comparison with the corresponding month last year. Placements were nearly 6 per cent in excess of those of the preceding month, but 20 per cent lower than in May, 1941. Moderate declines in services and agriculture were the most marked changes from May, 1941 a small decrease also was reported in manufacturing and minor gains in trade and transportation. Placements by industrial groups included: services 802; construction 251; agriculture 148 and trade 118. During the month, 724 men and 161 women were placed in regular employment.

ALBERTA

During May, vacancies offered at Employment and Claims Offices in Alberta were nearly 6 per cent above those of the preceding month and 15 per cent over those of May a year ago. There was a gain in place-

ments over April of more than 2 per cent, but a loss of slightly over one per cent in comparison with the corresponding period last year. In comparing placements with those of May, 1941, reductions were noted in agriculture and construction, which were almost entirely offset by advances in manufacturing, trade, transportation, mining and logging, none of which, however, was particularly pronounced. The majority of placements recorded during the month took place in the following industries: services 880; manufacturing 350; agriculture 310; construction 309; transportation 175; trade 157 and logging 119. Placements in regular employment numbered 1,431 of men and 337 of women.

British Columbia

The demand for workers, as shown by orders listed at Employment and Claims Offices in British Columbia during May, was nearly 7 per cent higher than that of April and 65 per cent better than in the corresponding month of 1941. Placements also showed a gain of more than 6 per cent over April, but a decline of 10 per cent from May a year ago. Reduced placements from the corresponding period in 1941, registered in construction, agriculture and services, were responsible for the contraction reported, although moderate increases were shown in manufacturing and trade, and nominal improvement in mining, logging and transportation. Placements by industrial groups numbered: services 1,325; manufacturing 990; construction 617, and trade 202. During the month 1,760 men and 488 women were placed in regular employment.

Movement of Labour

During the month of May, 1942, Employment and Claims Offices effected 24,200 placements in regular employment. Of these, 2,088 were of persons to whom was granted the reduced rate, 1,302 proceeding to centres within the same Province as the despatching office and 786 to other Provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4 is granted by the Railway companies to bona fide applicants at the Employment Offices, who may desire to journey to distant employment, for which no workers are available locally.
